Colonel Dodge.—"I wish some of you to go with me, that you may see our country, and that peace may be made strongly between you and the red men as well as between ourselves. The Pawnee O'Mohaws met the Osages, and Delawares, and Cherokees on our lands, and there made peace; they were enemies before; they are now friends, and do not hate each other. We wish you to come to us and make, in the same way, peace with us."

Ta-we-que-nah.—"You have a girl who was taken from our friends, the Kiowas. I have a Spanish girl; I will give you the Spanish girl in exchange for the Kiowa girl that you have brought with you."

Colonel Dodge.—"I wish to secure your friendship and the friendship of the Kiowas. I wish you to accompany me. I wish some of the Kiowas to go also; but I do not mean to sell the girl to them; I mean to give her to her relations and friends without price; I will give the girl to her tribe; they shall see how much their friends we are."

Ta-we-que-nah.—"If I go with you I shall be afraid to come back through the timber."

Colonel Dodge.—"I pledge myself that you shall be safely conducted back."

Ta-we-que-nah.—"I cannot go myself; my brother will go with you."

Here the talk was interrupted by a band of some twenty or thirty Kiowas rushing on horseback into camp, and almost into the door of Colonel Dodge's tent; the squaws and children fled in great alarm. The indignation of these Indians against the Osages had kindled to a great pitch, and could scarcely be kept in respectful bounds in their relation to us. The Osages, not many months previously, had murdered a large number of the women and children of the Kiowas whilst the men were absent hunting. We held in possession, of which they were informed, a Kiowa girl, who was taken on the occasion of the massacre alluded to; the Kiowas having just arrived, were not aware of the intention on our part to restore the girl, and consequently presented themselves in a warlike shape, that caused many a man in camp to stand by his arms. Colonel Dodge, however, immediately addressed them with assurances of our friendly dis-

position, and gradually led them into gentleness. They are a bold, warlike-looking Indian. Some of their horses are very fine; they ride well, and were admirably equipped to-day for fight or flight; their bows strung, and quivers filled with arrows. They kept their saddles chiefly. A relation of the Kiowa girl embraced her, and shed tears of joy at the intimation that she should be restored to her father and friends. She proves to be a relation of one of the chiefs. An arrangement was now made for a general council, to be held the next day, between the Comanches, Toyash, and Kiowa nations. (Remained in camp.)

July 24.—At 10 o'clock the chiefs of the council began to assemble at the place appointed for the meeting, which was in a wood about two hundred yards from our camp. The father of the Kiowa girl having learned that she was to be restored, in a speech addressed to the Kiowas, whose numbers every moment increased, gave vent to his joy and praise of his white friends. All came mounted and armed. Many of our officers were present. There were not less than two thousand mounted and armed Indians around the council. Great excitement prevailed among the Indians, but especially with the Kiowas, who embraced Colonel Dodge, and shed tears of gratitude for the restoration of their relative. An uncle of Wa-ha-sep-ah, a man of about forty years of age, was touchingly eager in his demonstrations, frequently throwing his arms around Colonel Dodge, and weeping over his shoulders, then invoking blessings upon him in a manner the most graceful and ardent. The women came in succession and embraced the girl, who was seated among the chiefs. The council being now in order, and the pipes having made their rounds, Colonel Dodge addressed the Comanche chief, who sat on his right, and who interpreted his words to the Kiowas, whilst a Toyash Indian, who speaks the Caddo tongue, communicated with the Toyash men from Chiom, one of our Cherokee friends, who speaks English and Caddo: "I am glad to see together the great chief of the Comanche nation, the chiefs of the Kiowa and Toyash people, and the American officers who are with me. We have been strangers until now. I am glad to meet the captain of the Comanches, (Ta-we-que-nah.) You must be a great man, and have much power with all the tribes around you. I ask you to urge to these Indians what I have said to you: that we are your friends, and that to secure our mutual and lasting friendship, it is better for some of each of you to go with me, as I have before mentioned to you."

Here another band of Kiowas, about sixty in number, rode up, led by a principal man, handsomely dressed. He wore a Spanish red cloth mantle, prodigious feathers, and leggings that followed his heels like an ancient train. Another of the chiefs of the new band was very slowly arrayed; he wore a perfectly white dressed deer-skin hunting shirt, trimmed profusely with fringe of the same material, and beautifully bound with blue beads, over which was thrown a cloth mantle of blue and crimson, with leggings and moccasins entirely of beads. Our new friends shook hands all round, and seated themselves with a dignity and grace that would well become senators of a more civilized conclave.

Colonel Dodge resumed. "Kiowa chiefs! I herewith present to you your relation; receive her as the best evidence of the sincere friendship of Americans. Our great captain, the President, purchased this girl of the Osages, who took her from your people, and has sent me to restore her to the arms of her friends who love her. The Comanche chief (Ta-we-que-nah) offered me yesterday, in exchange for her, a Spanish girl. I would not accept of his offer, for the delivery of the girl is an act of justice, and is but one of the many acts of kindness that the great American captain will be glad to show to you. You and the Indians who came with us have long been at war with each other; it is time you were at peace together. It is the wish of the President to secure a permanent good understanding among you all. He will send traders among you; you want guns, blankets, &c. The buffalo are becoming scarce; there are less and less every year. You shall have cattle which you can keep with you; you can plant your corn and cultivate the soil, as the Cherokees and other Indians do. Here is a young man (Mr. Chadwick) who has come out with me to see you, and who will return next summer, and bring goods and trade with you. I now wish you to consider the invitation given you to go with me, and I assure you that you shall receive presents, and be safely conducted through the timber country." One of the chiefs inquired: "Will you go to-morrow?"

Colonel Dodge.—"I wish to go as soon as practicable, as we have far to go. I wish you to visit General Leavenworth, another of your friends, and a captain under the great captain; he wishes to see you; he has never seen you; I should be glad to introduce to him two chiefs from each nation, or one chief and some of the warriors of each people."

Titche-totche-cha, chief of the Kiowas, signified his willingness to go. We-ter-rah-shah-ro, an old chief, 70 years of age, urged his red brethren to rely on the truth of Colonel Dodge's words. "He is a good man," said he, "believe his words."

The father of the Kiowa girl begged Colonel Dodge to accept a present, which the colonel declined, repeating what he had before said, that he did not wish for ransom or reward; that the child was given to the father as an evidence of the good feeling of his people for them.

Titche-totche-cha spoke. "The American captain has spoken well to-day; the white men have shown themselves our friends. If a white man ever comes to my country, he shall be kindly treated; if he wants a horse, or anything that I have, he shall not pay for it; I will give him what he wants."

The council here closed; we returned to our camp, and left the Indians to decide in regard to accompanying us. It is on all accounts desirable to move from here. Our provisions prove unhealthy for our men, consisting entirely of green corn and dried horse and buffalo meat. The weather has been excessively hot and dry. Our men, many of them sick, are without a physician or medicines; two or three officers are and have been for several days ill of fevers. The Comanche squaws are very troublesome; they steal everything that they can secrete. The Toyash women are infinitely respectable. The difference in these three tribes seems to be somewhat thus: The Comanche is an arrogant, jealous, savage don; the Toyash, a savage farmer; whilst the Kiowa, more chivalric, impulsive, and daring than either, reminds one of the bold clanish Highlander, whose very crimes are made by the poet captivating. This tribe has roamed more towards the Rocky mountains until within a few years past.

July 25.—The chiefs of the three tribes early visited our camp. Colonel Dodge presented them with guns and pistols. Fifteen Kiowas, including the chief, Titche-totche-cha, were the first mounted and equipped, ready to march with us; the Comanche chief, very cautious and apparently suspicious, deferred till late, when four Comanches, a squaw, and our early acquaintance, the Spaniard, joined us; there was much delay on the part of the Toyash. At length the old chief, We-ter-ra-shah-ro, a Wacoah chief, (of a small band, who speak the same language as the Toyash people, and live near their town,) and two Toyash warriors, rode into our camp prepared to move with us.

The command, with the Indians, the white boy, and the negro in company, marched at 3 o'clock, halted at 5 o'clock, and encamped on a creek six miles east.

July 26.—Marched at half-past 7 o'clock; our guide, the Pawnee O'Mohaw, who had promised to remain with us, left us; he was no loss, for he had led us over a uselessly long route, over rocks and hills, through deep ravines, all of which our guide to-day, a Toyash, has avoided, and, in place thereof, we have passed through a beautiful valley four or five miles in width, over an open, level prairie, leaving the granite roads on our right and left in the mountains; course to-day east, distance twenty-one miles; water scarce, grass very much destroyed by heat and dry weather; encamped on a stream of good water, good grazing; severe shower of rain, the first that has blessed us for many days; parched corn and dried buffalo meat our fare; health of command tolerably good. From conversation to-day with one of the Indians (Ski-sa-ro-ka, an intelligent Toyash) we learn that their nation lived formerly south; that their oldest men were born there, and that they and the Comanches have long been in habits of friendly intercourse; the Comanches exchange buffalo meat for the agricultural productions of the Toyash; the Comanches not much liked by the Toyash; they cheat them and ride away. The Kiowas, a newer acquaintance, more honest and gentle. The Comanches of Texas a much more powerful tribe than those on this side of the Red river; they are called the Ho-ishe Comanche.

July 27.—Marched at half-past 7 o'clock, course east, distance twenty-three miles; reached the sick camp at 4 o'clock; found Lieutenants Izard and Moore both sick with fevers; also Mr. Catlin very ill; twenty-nine sick men in both camps. Lieutenant Wheelock's servant, left sick on the 19th instant, died in our absence. Our road to-day lay through a valley; occasional interruptions from timbered creeks and small thickets, until we reached "Roaring river," a short stream, but containing a considerable volume of water; empties into Red river. The Comanches who set out with us, left us to-day on account, as they say, of the sickness of the squaw. The Spaniard, who seems to belong to that tribe more than with any other, remains with us. These Indians seem well contented, and move without restraint, encamping with us at night, and setting out with the command, or after it has marched, as they please. Colonel Dodge and all the officers unable to account for not hearing from General Leavenworth. From the short supplies taken, we have reason to expect to hear from or meet with our wagons; our buffalo meat very short, and no game as yet.

July 28.—Broke up the sick camp, and marched at half-past 9 o'clock, with the whole command, taking again with us the Senecas, who had been left to hunt for the men left at this camp. Excessive hot weather; 43 sick, 7 in litters; course east by north, distance 12 miles. The heat to-day has been overpowering, both to men and horses; water tolerable; course north, from our trace going out; camp to-night about six miles from former trace.

Colonel Dodge sent an express in search of General Leavenworth, to inform him of our return from the Pawnee villages. Colonel Dodge resolves to wait in the buffalo range for orders from General Leavenworth. Deer abundant to-day; one or two killed. One of the men killed a panther yesterday; passed to-day many hills of gypsum.

July 29.—Marched to-day at 8 o'clock, east by north, distance fifteen miles; provisions very short. At 12 o'clock the cry of buffalo was heard, and never was the cheering sound of land better welcomed by wearied mariners, than this by our hungry columns. The command was halted, and some went together; the report of Beatte's rifle, and the fall of a fat cow; halted at 4 o'clock; killed two more buffaloes. Passed to-day more plaster of paris; road to-day over open, rolling prairies, between two forks of the Washita; met a small party of Toyash Indians. Our red friends suffer exceedingly from the heat of the sun; we covered them this morning with shirts.

July 30.—Marched at 8 o'clock; weather excessively hot; course northeast, fourteen miles; course interrupted by frequent deep gullies totally impassable for wagons. Nine miles from camp passed the Washita; good water to-day; encamped on a fine stream; large fishes visible from the bank; timbered creeks, blackjack, elm, and mulberry trees; more gypsum.

July 31.—Marched at half-past 8 o'clock; men in fine spirits; abundance of buffalo meat; course northeast; distance 10 miles; encamped on a branch of the Canadian; three buffaloes killed this morning; no news yet from express; anxiously looked for; face of country rolling prairie; frequent deep gullies; one of the Kiowas killed three buffaloes with *three arrows*.

August 1.—The signal for advance was sounded at half-past 8 o'clock; course north by east; distance 15 miles; halted at half-past one o'clock; 10 miles from camp crossed the Canadian; plenty of water to-day; passed the Canadian about 100 miles from our ford going out; abundance of buffalo, immense herds in every direction from the camp; men employed at night in drying meat; officers and men fortunate who have been provident enough to save a small quantity of corn for parching. Camp alarmed this evening by the cry of "secure your horses from the buffalo;" a herd was rushing upon our camp, around which our horses had just been picketed, and had approached within two hundred yards of us, when our mounted sentinels changed their direction, and thus saving us from another "stampede." We have been fortunate in having had but one occurrence of this not uncommon evil with bodies of horse on the prairies.

August 2.—Rest! Welcome rest for men and horses; occupied in killing and drying buffalo meat for the anticipated march to Fort Leavenworth; probable distance thither 400 miles; our men not frequently lost in hunting; in several instances absent from camp all night; our men find an excellent substitute for tea and coffee in a wild sage plant; we still have the advantage of being not at all troubled with flies or misquitos; the nights are so cool that the covering of a blanket is pleasant.

August 3.—Moved a mile at half-past 10 o'clock, for change of grazing and police; our horses are in bad order, so much so that it is feared they may not be equal to a march to Fort Leavenworth; may possibly be compelled to move to Fort Gibson to recruit and shoe them. Little Martin flourishes, and is a great favorite in the command; he is an uncommonly fine boy.

August 4.—The command marched at half-past 8 o'clock, southerly direction, eight miles along the Canadian, in search of buffalo; they have fled from the vicinity of our last camp; passed large herds of buffalo; the Kiowas dashed in amongst them and killed, with their arrows, a great many of them; grass very much dried, scarce affording subsistence for our horses. Colonel Dodge has decided on marching to Fort Gibson. The prairie took fire to-day near our camp and was with difficulty extinguished.

August 5.—Rested for the day; men employed in curing meat; the express to General Leavenworth returned. Intelligence from Captain Dean of 3d infantry, announces the death of General Leavenworth; he died at his camp near "Cross Timbers," on the 21st of July; Lieutenant McClure, of this regiment, died at the Washita on the 20th of July; bilious fevers; one hundred and fifty men sick at the Washita.

August 6.—Marched at 8 o'clock for the fort at the mouth of Little river; course southeast; distance, twenty-three miles; road through "Cross Timbers." This is a timbered thicket, small blackjack sap-

plings so close as to frequently require the axe to make a road for a horseman. Five litters in our train; men in them extremely ill. Colonel Dodge sent an express to Colonel Kearney, who is at Camp Smith, near the mouth of the Washita, directing him to move his command to Fort Gibson; herds of buffalo broke and rebroke through our columns to-day; encamped in timber, in the bottom of a branch of Little river; found excellent grazing in the pea vines; litters came up several hours after the command.

August 7.—Our columns started at eight o'clock; course, south by east; gained eighteen miles; still in the "Cross Timbers," which promise to continue till we strike the road to Fort Gibson; a few small prairies interspersed amongst the severest blackjack thickets. Our route to-day has been on the dividing ridge between the Canadian and Little rivers. Scarcity of water; fortunately found at four o'clock good water and grazing.

August 8.—Marched at eight o'clock, halted at three o'clock; distance, 18 miles; course, east by south; exceedingly warm day; stubborn thickets; crossed and encamped in the bottom of Little river; shallow stream, narrow bed, miry shores, no water from morning till the halt for the night; passed many creeks the beds of which were entirely dry; our horses looked up and down their parched surfaces, and the men gazed in vain at the willows ahead, which proved to mark only where water had been. The timber is larger here; black walnut and sycamore; lime and freestone; the woods abound to-day in plums, and a variety of finely-flavored grapes, no longer any trace of the buffalo; sick report numbers thirty men and three officers.

August 9.—Marched at the usual hour and made twenty miles in a northeast course; cross timbers, but more open than for the last three days; tolerable supply of water; soil sandy; encamped at 4 o'clock in open timber, near where we struck the road from Fort Gibson to the Washita, which was three miles from the post at the mouth of Little river.

August 10.—Dragoon camp "Canadian." We drew from Lieutenant Holmes, commander of the infantry camp "Canadian," at the mouth of Little river, provisions for four days; Lieutenant Holmes well advanced with his buildings; one block-house, and quarters for one company erected; vast many sick; on our sick list thirty. Remained in camp.

August 11.—Marched at eight o'clock; left our sick, whom we brought in litters, at the infantry camp; gained on the road to Fort Gibson 22 miles; our men happy, with pork and flour.

August 12.—Command moved at eight o'clock; express returned from Camp Smith; Lieutenant Colonel Kearney reports many sick; 71 for duty, 41 sick; 8 for duty at Camp Washita, and 70 sick; many of our horses disabled; led by men in rear of the columns; tolerable water, wholly in pools. It is worthy of remark that the mules of the command look better than when we started on the campaign, while it would be difficult to select ten horses in good order. The command ordered to walk and ride one hour alternately; this relieves the horses.

August 13.—Marched at half-past seven o'clock, and reached the Creek settlements at the north fork of the Canadian, 17 miles. The Toyash and Kiowas met the Creeks this evening and shook hands with them; we purchased here corn for our horses; informed here by a citizen that the mother of little Martin has recently offered two thousand dollars for his recovery; she will soon be made happy by his restoration without ransom or reward.

August 14.—We marched at eight o'clock, 20 miles to our former camp, ("Rendezvous,") from whence the regiment started on the 21st of June. Our horses are exceedingly worn, though somewhat aided to-day by the corn we gave them yesterday at the North fork. The season is unfortunately late for grazing; it is only in timber that tolerable grass is found; extraordinary heat to-day; the breeze comes against the face and hands with an unpleasant heat, so that one turns from it as from the keen blasts of winter; water scarce and in pools; our men present a sorry figure, but one that looks like service; many of them literally half naked; sick list reduced to nineteen.

August 15.—Marched at half-past seven o'clock; an officer was sent in advance to purchase corn; the command marched 14 miles, and encamped three miles from the west bank of the Arkansas. Colonel Dodge and staff, together with the Indians, crossed the river late in the evening, and reached Fort Gibson.

August 16.—Fort Gibson; Major Mason and three companies ordered this side of the river; Captain Sumner and three companies directed to remain in camp on the west side of the Arkansas.

August 24.—Colonel Kearney's command arrived yesterday; great number of sick men, and worn down horses; officers belonging to it are Captain Trenor; Lieutenant Swords, (sick;) Lieutenant Van Deveer, (sick;) Lieutenant Eastman, (sick;) Lieutenants Bowman, Ury, and Kingsbury; Assistant Surgeon Hailes, (very sick.)

Runners have been sent to the chiefs of the Osages, Cherokees, Creeks, Choctaws, &c., for the purpose of assembling them in council with the Indians who have accompanied us. Our friends from the prairie are in good health, and are apparently contented. Little Martin is still with Colonel Dodge, and the negro we brought from the Toyash village has been delivered to his muster.

T. B. WHELOCK, *First Lieutenant Dragoons.*

No. 2.

REPORT OF THE QUARTERMASTER GENERAL.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, November 22, 1834.*

SIR: In obedience to your order, and in compliance with the regulations for the government of the department, I have the honor to submit the following report of the operations of that branch of the service confided to my administration for the 1st, 2d, and 3d quarters of the present year, to which I have added that portion of the last year not included in my report of the 27th November, 1833.

The balance remaining to be accounted for by the several officers of the department at the date of that report amounted to \$84, 286 48

To which is to be added—

1st. Remittances, viz:	
In the 4th quarter, 1833	\$330, 237 26
In the 1st quarter, 1834	155, 703 74
In the 2d quarter, 1834	181, 522 90
In the 3d quarter, 1834	317, 410 82
	\$984, 874 72

	Brought forward.....	\$984, 874 72	\$84, 286 48
In small sums, during the year, from other departments, not on requisitions from this office, but accounted for through it.....		8, 341 19	
			993, 215 91
2d. Proceeds of sales of public property, either unfit for service or no longer required for public use, and rents received for public lands and buildings not required for military purposes.....			20, 489 01
	Making the total to be accounted for.....		1, 097, 991 40
	Of which there has been accounted for—		
	1st. By disbursements, viz:		
	In the 2d and 3d quarters of 1833, not included in the last report, the accounts not having been received at its date	\$6, 118 50	
	In the 4th quarter, 1833.....	281, 929 98	
	In the 1st quarter, 1834.....	179, 545 33	
	In the 2d quarter, 1834.....	207, 528 55	
	In the 3d quarter, 1834.....	315, 424 19	
		\$990, 546 55	
	2d. By deposits to the credit of the Treasurer of the United States.....	4, 434 38	
	3d. By amount turned over to the Ordnance department by the assistant quartermaster at Detroit, being part of the proceeds of public property sold at that place.....	5, 053 48	
	Total accounted for.....		1, 000, 034 41
	Leaving a balance to be accounted for, of.....		97, 956 99

The accounts of four officers remain to be received for the second quarter, and of eight officers for the third quarter of the present year, which will probably reduce the balance about fifteen thousand dollars. The remainder is distributed among more than sixty officers at the various posts, and connected with the several public works directed by the department throughout the Union; and I confidently believe that the whole of it will be applied to the proper objects, and accounted for at the close of the present quarter.

The property under the administration of the department is promptly accounted for by the officers who receive it, as well of the department as of the several corps of the army.

The balance remaining in the treasury, of the appropriation for the Quartermaster's department proper, with the sums due to it for expenditures on account of other branches of the service, will not only be sufficient for all demands against it for the remainder of this year, but will leave twenty thousand dollars applicable to the service of the next year.

The balance remaining on account of the transportation of troops, supplies, &c., will, it is believed, be sufficient to meet all demands against it within the year; and the experience of the present year has induced me to venture on a small reduction of the estimate for the next year.

The appropriation for the transportation of ordnance has been found inadequate to the wants of the service. My estimate was cut down one-fourth at the last session of Congress; in consequence of which an unusual number of arms and a large quantity of ordnance stores have accumulated, and must necessarily be removed during the ensuing year.

The appropriation made at the last session of Congress for the transportation or travelling allowance of the officers of the army, including those of the dragoons, when moving on duty without troops, was several thousand dollars less than the actual expenditure in 1833, without including the dragoons. I estimated for a sum barely sufficient to meet the expenditure at the then established rate, but my estimate was cut down fifteen thousand dollars; the consequence was the reduction of the rate, before long enough, to nine cents per mile, the utmost that the present appropriation will bear. The mileage to officers of the navy, when travelling on duty, authorized by the regulations submitted to Congress at its last session, is twelve and a half cents to captains, commanders, and judge advocates, and ten cents to all others. Officers of the army are subjected to as much expense in travelling as those of the navy, and in common justice ought to have an equal allowance. The expenditure on this account may seem large, but it is to be remarked that the United States are engaged in improvements, both military and civil, upon as great a scale as any other civilized nation. The greater part of those improvements are directed by officers of the army; they are to be found on all our frontiers, and dispersed over every part of our extensive territories, directing the construction of fortifications, arsenals, barracks, roads, bridges, breakwaters, and other national works; surveying routes for canals, railroads, and military roads; assisting in a trigonometrical survey of our coast, and in hydrographical surveys, and in improving numerous harbors, and removing the obstructions to the navigation of rivers; a large portion of them are emphatically workmen, and can say with truth that, whosoever may eat the bread of idleness, they are not of the number. The improvements on which they have been engaged since the termination of the war with Great Britain, besides their great commercial advantages, will, when completed, have more than quadrupled the defensive military power of the country. Of what consequence is the saving of a few thousand dollars, cut off from the travelling allowance of men thus engaged, compared with the positive advantages which the nation is deriving from their labors? The reduction having been made in the House of Representatives, I have not felt at liberty to estimate for more than the amount appropriated last year, but I most respectfully and earnestly recommend that the subject be so placed before Congress that a just and equitable allowance be granted.

From the numerous casualties attending the service of the regiment of dragoons, I have been obliged to increase the estimate for horses and equipments to thirty-five thousand dollars, being fifteen thousand dollars more than the estimate of last year.

Of the works under the direction of the department, the barracks authorized in the vicinity of New Orleans were commenced early in the season, and at the date of the last report, although the operations had been greatly retarded by the heat and rains, as well as by the prevalence of the yellow fever, the buildings had been covered; every part of the work is reported to have been executed in the best manner. To complete the work, with its defences, the appropriation asked for at the last session of Congress will be necessary.

Of the works authorized at Savannah, the soldiers' quarters, though not entirely finished, are reported to be in a state to be occupied; the officers' quarters are in progress, but, to complete them and the defences, a further appropriation will be necessary.

The works at Baton Rouge, Fort Severn, and Green Bay, are in rapid progress; at the latter place, it is believed, all the labors will have terminated by the end of the present year, except upon the hospital, which will probably be finished by the 1st of June.

The new barracks at Fort Crawford were, at the date of the last report, in such a state of forwardness as to leave no doubt of their being soon completed.

The repairs at Fort Gibson, for which an appropriation of five thousand dollars was made at the last session of Congress, have not been commenced; the buildings are in so bad a condition that the late commanding officer gave it as his opinion that the appropriation would be entirely lost if applied to the old work. He urged the necessity of a new work, and recommended that it be built of stone, of which there is an abundance in the neighborhood, and of good quality.

A property adjoining Fort McHenry, near Baltimore, which is now rented by the public for the accommodation of the garrison, will be sold in a short time, under a decree of the chancellor. Regarding Fort McHenry even as a secondary work, according to the classification made by the board of engineers, the United States should own the property referred to. I therefore respectfully ask that authority be obtained from Congress to make the purchase; no appropriation will be required, as the necessary sum may be spared from the Quartermaster's department.

A new post has been established, and barracks, stables, and other buildings have been erected at the Des Moines, on the Upper Mississippi, for three companies of dragoons, and accommodations for four companies at Fort Leavenworth and for three companies near Fort Gibson were in a state of preparation at the last reports from those posts.

The amount appropriated at the last session of Congress for the purchase of an additional lot of land at Fort Sullivan, required for military purposes, has been applied as designed, and the land is now the property of the United States.

The military road in Maine has been thoroughly repaired and completed; and, in compliance with the provisions of an act of Congress approved the 30th of June last, it has been transferred to the State of Maine.

Instructions have been given to the principal officer of the department in Arkansas to resume the repair of the Memphis and Little Rock road so soon as the season shall permit, and also to take measures to cause the following roads, authorized at the last session of Congress, to be surveyed and opened, viz: a road from Helena to the mouth of Cache river; a road from Jackson, in the county of Lawrence, by Liberty and Fayetteville, in the county of Washington, to Fort Smith; a road from Strong's, (a point on the military road from Memphis to Little Rock,) by Litchfield, in Jackson county, to Batesville; and a road from Columbia, in Chicot county, to Little Rock.

A road has been opened, by the labor of the troops, on the southwestern frontier from Fort Towson to False Washita of Red river; also one from Fort Gibson to the Little Red river of Arkansas, and thence to the mouth of False Washita, and one direct from Fort Gibson to the point where the latter road crosses the north fork of the Canadian.

On the road from Pensacola to Tallahassee, in Florida, repairs have been made, and bridges have been erected over several rivers, creeks, and sloughs. The officer in charge of the work, finding that the money expended would probably be lost by closing his operations when the appropriation was exhausted, went on to complete the work, and has exceeded the appropriation eighteen hundred and seventy-five dollars and five cents. I have not included that sum in my estimate, but I respectfully recommend that application be made to Congress for an appropriation to cover the expenditure.

The appropriation for the road from Fort Howard to Fort Crawford not being sufficient to carry on the work with advantage by means of hired laborers or by contract, and the troops at both posts being engaged in building, nothing has yet been effected except the survey of the route.

The labors at the Delaware breakwater were resumed early in July, and on the 18th of October, when they were suspended for the season, one hundred and twenty-two thousand nine hundred and ninety-five tons of stone had been deposited at the work, the greater part of which was used in bringing up that portion of it which had been previously founded. The whole of the appropriation made at the last session of Congress, except a small sum reserved for contingent expenses during the winter, will have been expended in closing the accounts of the work for the season.

For three years past the surveys of the work have exhibited a trifling deposit of mud and sand within the western extremity of the breakwater, but it was not until September of the present year that the shoal had assumed such a form and extent as to cause any apprehension of injury to the harbor. On reporting to you the fact, you caused a board of survey to be formed, and directed it to proceed to and carefully examine the work. The annexed paper, marked A, is a copy of their report, from which it will be seen that the facts previously reported are confirmed. In consequence of the unanimous opinion of the board, and with your assent, I have reduced the estimate for next year to one hundred thousand dollars. That sum will be sufficient to bring the whole of the work already founded to its destined height, or nearly so; and, until the course of observations indicated by the board be completed, more should not be attempted.

Before closing my report, I deem it my duty respectfully to call your attention to the situation of the officer, clerks, and sergeants employed in my office. It has been stated in a semi-official form, and under high official sanction, that the increase in the expenses of the army are in a great measure to be ascribed to the employment of officers and sergeants in the public offices at Washington. It is not my place, nor would it be proper, in a report like this, to refer to other offices; but, so far as this office is concerned, the statement made, and the opinion founded on it, are entirely incorrect. There is one officer attached to the office who, under a regulation of 1818, receives, in addition to his pay as an assistant quartermaster, a per diem of one dollar and a quarter; there are three sergeants attached to the office, two of whom receive five hundred dollars and the other three hundred dollars per annum, in addition to their compensation as sergeants. The two sergeants who receive the highest compensation get, altogether, only seventy-five cents over eight hundred dollars, the pay of the lowest class of clerks in the civil offices, and the other sergeant receives less than a messenger in a civil office. They, as well as the clerks in the office, have often to labor on Sunday and at night, to prevent the business from falling back. Now, all I ask for them is, that a thorough investigation be made, and their compensation be fixed in relation to the labors which they actually perform, and to the responsibility of their stations. This would satisfy them; less would not be just.

It has been the practice of the government under every administration, as far as I have been able to

trace the matter, (and I have traced it as far back as 1806,) to allow extra compensation for extra services. Under this practice, known to have existed so long, officers of this department, as well as of other departments, sometimes claim a percentage for expenditures which they consider as not within the range of their appropriate duties. Independently of orders and regulations, they will probably continue to claim that which they deem to be their right, and there is but little doubt of the courts of the country ultimately allowing it to them. Recent decisions of the Supreme Court seem to have settled the principle. In this state of the case, I respectfully suggest whether it be not advisable that their duties be defined by law, or that power be conferred on the President or Secretary of War to define them; and either that the percentage for that which is now considered extra duty be positively granted or positively withheld.

In 1821 more than twenty officers of the Purchasing department were disbanded, and their duties were assigned by the Secretary of War to the Quartermaster's department; and in May, 1826, Congress assigned to the department, by law, the direction of the accountability for clothing. This is an extremely disagreeable duty, abounding in laborious details, and one which brings the department into constant collision with the army. It can be effectually performed only by a department having the entire control of the subject. A separate bureau having been established and specially charged with the administration of that branch of the service, I respectfully ask that application be made to Congress so to modify the law above referred to, that I may be relieved from that part of the duty which I am now compelled to perform, and that it be transferred to the officer in charge of the Clothing bureau.

I have the honor to be, very respectfully, your obedient servant,

TH. S. JESUP, *Maj. Gen. and Quartermaster General.*

HON. LEWIS CASS, *Secretary of War, Washington City.*

A.

LEWES, *Delaware, November 10, 1834.*

SIR: In compliance with the instructions of your letter of October 25, we have made an examination of the Delaware breakwater, and now present the following report thereon:

It appears by an inspection of the maps representing the state of the works at the close of operations of each year that, since 1830, every year has presented new additions to a shoal near the west end of the breakwater, and that within the last year, particularly, this shoal has greatly increased.

Before 1833 little had been done on the ice-breaker; since that period the work has been brought nearly to completion, and a shoal on either side of this mass has been observed to be simultaneously forming.

These are the principal facts bearing on the question before us, and, after a deliberate consideration of them, we unanimously concur in the following opinions, viz:

That the next year's operations should be confined to giving to all the work already begun the ultimate dimensions, omitting any further extension of the work eastward, and waiting during the year, and, if necessary, for a longer period, the further growth of the shoal.

That, in the meantime, very numerous and careful observations should be made to determine the precise amount of enlargement, both in lateral limits and in elevation, of all the shoals.

That a system of observations should be steadily pursued whereby the force and direction of the flood and ebb currents at different times of tide, and at different distances from the works, may be accurately given and clearly represented on the map.

With the extension of the work above water herein contemplated, the immediate advantage will be obtained of a considerable augmentation of sheltered space; the same extension will serve to indicate, in a more decided manner, the form and magnitude which the shoals may be expected ultimately to attain. It will bring nearer to a solution the important question as to the most proper width to be given to the eastern entrance to the harbor; and, with the aid of the information obtained by the observations on the shoals and on the tides, an opinion less liable to error may be formed as to the exact cause of the shoals, the extent to which they may reach, and, if remedy or correction be possible, the mode and manner of remedy or correction.

Sooner than herein contemplated we believe it would be premature to resolve on any other change than that indicated of the original project, as we believe it would also be premature now to fix upon the matters of detail in the style or manner of its ultimate finish.

We have the honor to be, very respectfully, your most obedient servants,

TH. S. JESUP, *Major General and Quartermaster General.*

JOS. F. TOTTEN, *Lt. Col. of Engineers and Bvt. Colonel.*

S. THAYER, *Brevet Lieutenant Colonel.*

HON. LEWIS CASS, *Secretary of War, Washington.*

No. 3.

REPORT FROM THE ENGINEER DEPARTMENT.

ENGINEER DEPARTMENT, *November 1, 1834.*

SIR: In compliance with your instructions, I have the honor to submit the following report relating to the operations of this department during the year ending on the 30th September last. It is accompanied by three tabular statements, marked A, B, and C. The first two relate to its fiscal concerns, and the last exhibits the works projected by the board of engineers which have not been commenced, and an estimate of their cost.

FORTIFICATIONS.

Fort Independence, Boston harbor.—Operations on Castle island, the site of this fort, have been confined to the works referred to in my last annual report. The sea and wharf walls are nearly completed; their total length is 1,052 feet, and 2,342 cubic yards of stone have been used in their construction. All that part of the island exposed to abrasion from the action of the waves is, with the exception of about

150 feet, now amply protected. A portion of the old wall is, however, in a ruinous condition, and should be rebuilt without delay; an estimate for that object will therefore be submitted.

You will, no doubt, recollect that a revised project for rebuilding Fort Independence, with certain improvements, was presented by the board of engineers in March last. The question as to the adoption of this project not having been settled, it was deemed proper to limit the arrangement for executing that work to the collection and preparation of such materials only as will be alike required on the original and revised plan. The material and workmanship of the fort, in its present condition, are such as to render it probable that the whole work will have to be rebuilt.

Fort Warren, Boston harbor.—The late period at which the appropriations were made at the last session of Congress rendered it proper to limit the operations at this work to preparatory measures for efficient prosecution of the fort during the next working season. The buildings necessary to accommodate the laborers and other persons employed at the work are in progress of construction, and will be finished in due time. A wharf, requiring for its construction about 2,000 cubic yards of stone in walls and 17,000 yards of earth embankment, will soon be ready for the reception of materials. Everything will be prepared to commence the masonry of the work early next spring.

Fort Adams, Narragansett Roads, Rhode Island.—Operations at this work have been prosecuted in the usual satisfactory manner. The fort, as far as constructed, is in good condition, and the funds appropriated for it have been applied to advantage.

Fort Hamilton, Narrows, New York.—The slight defects in construction, always to be expected in a work of this magnitude, have been repaired, and the fort may, by the end of the present year, be considered as finished.

Fort Lafayette, Narrows, New York.—A portion of the unexpended balance remaining on account of this work has been applied to the repairs of the sea-wall. This became necessary in consequence of the failure of the mortar with which it was pointed, and the settling of the wall in many places.

Fort Columbus and Castle William, Governor's island, New York.—The report of the engineer charged with the repairs of these works is highly favorable. In the former the scarp-walls, except the pointing and parapets, have been finished; the counterscarp revetments and revetments of the glacis are nearly completed. The facing of the covered-way revetment leading from Fort Columbus to Castle William will be done this fall. The masonry of the magazines and barracks, as well as that of the communications connecting the former, is finished, as is also the facing of the *redan*. All the masonry of the barracks on the south, west, and north fronts is nearly finished, and the roofs are in readiness to receive the covering; the masonry of those on the east front is in a state of forwardness. Measures have been taken to finish the repairs of Castle William as speedily as practicable.

Fort Schuyler, Throg's Neck, East river, New York.—Agreeably to your instructions, the operations on Throg's Neck have been limited to the making of such arrangements as will enable the officer charged with the construction of this fort to prosecute the work with efficiency during the next working season. The most ample preparations have been made. A permanent wharf will be in readiness by the time it is required; the necessary boats and machinery have been provided; an ample quarry, of good quality of stone, prepared; and, indeed, everything that may tend to expedite the work, when commenced, will be found in waiting.

Fort Delaware, Delaware river.—The annual report of the officer charged with this work has not yet been received. This is, no doubt, owing to his perpetual engagements with the several works in course of construction under his supervision.

Fort Monroe, Hampton roads, Virginia.—All the permanent parts of this work were completed last year. The ramparts of fronts 5, 6, and 7, together with the glacis and road in advance of these fronts, were, with the exception of a small portion of front 5, formed and covered with earth. The rampart of covertway and place of arms, in advance of front 5, was in a state of forwardness along its whole extent, and fifteen thousand cubic yards of sand were deposited towards the construction of the redoubt; five hundred tons of stone were collected and put in place for the protection of the beach in front of the casemated battery and the glacis of front 6; conduit pipes for conducting the water from the roof of casemated battery laid; the piazzas of curtains 2 and 3 completed, and all the materials for the draws to bridges and gates procured; the draws and gates to main entrance finished, and the timber for the others partly prepared; the earth for the parapets on all the fronts, except 1, 2, and 3, was collected at the foot of the scarp-wall; the ditches of all the fronts were excavated to their proper depth, and the glacis and road in advance formed, except those on front 1; the casemated covertway on front 4 was completed, and the funds available, with the force then organized, amply sufficient for the completion of the fort, with the exception of putting parapets on the main and out-works, which was not deemed advisable for the present, when the operations of the Engineer department were arrested by general order No. 54. This order directed that the work, with its funds, be placed under the immediate orders of the officer commanding the troops on that station. The main work was, therefore, entirely completed, except the gates, the raising of the half parapets on fronts 1, 2, and 3, and the whole parapets on the other fronts—the earth required for these last being placed at the foot of the scarp. Four thousand three hundred and ten cubic yards of earth were required to complete the rampart of covertway on front 5; twenty-one thousand three hundred and eighty to finish the rampart of redoubt; twenty thousand two hundred and ninety-seven yards for the construction of the parapet on covertway; and eight thousand eight hundred and ninety for the parapet of the redoubt.

It has already been stated that the funds available for this work were, at the time they were transferred, deemed amply sufficient for its completion according to the terms of the estimate upon which the appropriation of the last session of Congress was requested; and but for the circumstance above referred to, I should most likely have had the gratification of reporting it finished. It is proper to remark here, that the original plan of this work contemplates the revetment of the counterscarp, excepting on front 4, with sods. Doubts are entertained, however, as to the durability of this material in a position like this, exposed to the abrasions of the waves and other action of the water in the ditches; and the question may arise as to whether it may not be proper to replace it by stone. This subject it was my intention to have brought to the notice of the War Department at the present time, and, if deemed necessary, to have submitted an estimate for a counterscarp revetment of stone.

Fort Calhoun, Hampton roads, Virginia.—The funds appropriated for this work have been applied in furtherance of the views referred to in my last annual report. Upwards of twenty-eight thousand tons of stone have been added within the year to that previously received. Of the whole quantity received 654.04 tons have been dressed for building, leaving 5,139.07 tons rough building, and 23,073 tons break-

water stone. All the stone required for building is now accumulated; and the position that will be eventually occupied by the mole serving as the basis of this work is covered and protected by breakwater stone. Three thousand four hundred and sixty-five cubic yards of sand have been deposited within the interior of the fort towards elevating the terreplein. All the stone received this year, except eight hundred tons required for the extension of the mole to its proper limits, has been placed so as to act with a uniform pressure over the foundation of the walls of the work. It is estimated that the fort, when finished and garrisoned, will add to the permanent weight now acting on the foundation about sixty-three thousand tons; of this there are accumulated along its whole extent, and operating in a similar manner, 61,866 tons. It is proposed to add to this weight 25,000 tons of breakwater stone, the probable balance required for the graduation of the mole, and to compensate for its subsidence, and to allow the whole to remain until an equilibrium is established between the pressure and resistance, when the work may be resumed.

A careful examination has shown that although the weight added within the present is double that of the previous year, yet the last annual subsidence of the centre of the work is less than one and a third of what it was in 1833—giving fair indication that the equilibrium will, ere long, be attained. Another favorable indication is, that those parts of the mole that formerly settled most have this year gone down the least. On the whole, it may be inferred that all irregularity of settling is rapidly disappearing, and that the substratum is approaching a state of uniform compressibility throughout. During the gale of last winter the temporary wooden wharf constructed for the reception of materials, having been much worm-eaten, yielded to the action of the sea, and was almost entirely carried away; another has, therefore, become necessary, and it is proposed, with the funds now available, to build a new one, that its foundation may undergo the same test as that of the work.

Fort Macon, Beaufort, North Carolina.—Soon after I had the honor to submit my last annual report, when it was supposed that this work would, within a very short time, be finished, it was found necessary, to fit up some of the casemates for the accommodation of the troops; to rebuild the wharf, which had become useless from decay, and to construct a dike to connect it with the fort. An estimate was submitted, and an appropriation made. The funds have been applied to these several objects, as well as in procuring materials for the preservation of the site, this being also contemplated by the estimate. The fort is completed and ready for inspection. The dike and wharf are, no doubt, done by this time, and the operations for the preservation of the beach have produced results of a very satisfactory character.

Fort Caswell, Oak island, North Carolina.—This work is in readiness to receive a garrison, and it is respectfully recommended that one be ordered to occupy it.

Fortifications in Charleston harbor, South Carolina.—Operations under this department in Charleston harbor have been directed, since my last report, to increasing the mole previously commenced on the site of Fort Sumpter, and to the protection of the beach in the immediate vicinity of Fort Moultrie. They have, however, been but limited in consequence of the late period at which the funds for the present year were rendered available. Five thousand five hundred and twenty-four tons of stone were added to the foundation of Fort Sumpter in the fall of 1833, and the month of January last, when the shipments from the north were suspended for want of funds. Except the alteration produced by this addition, the mole remains in the same state as at the end of the last fiscal year. The heap, except at one place, is now raised to a level of two feet above low water, requiring about eleven thousand tons of rough stone to complete it, besides ten thousand tons of split granite to form the foundations of the walls between high and low water. In this state it is proposed to leave the work till the question of jurisdiction over the spot shall be settled, and the necessary orders to that effect have been issued. This, it is hoped, will not be attended with much, if any, delay. No estimate will, however, be submitted for that work, it being intended to apply the amount estimated for fortifications in Charleston harbor to the preservation of the site of Fort Moultrie.

In the month of September last one hundred and twenty-seven tons of rough stone were deposited in the breakwater at Fort Moultrie. In consequence of not being able to procure sufficient stone in time, a portion of this work was washed away during the last winter and spring; this injury has, however, been repaired, and the whole work extended about one hundred and thirty feet; it is now upwards of one thousand three hundred feet long, presents a firm and substantial appearance, and has withstood several severe gales. The sand is accumulating about it, and experience thus far affords flattering assurances that the interesting and very desirable object for which it was commenced will soon be realized. It is proposed to extend it about four hundred feet further.

Fort Pulaski, Cockspur island, Ga.—This work has been prosecuted to the extent of the available means. The report from the local engineer presents it in a very satisfactory state.

Fort Marion, St. Augustine, Florida.—Little or nothing has been done at this work since my last report. Circumstances which are known to you led to the belief, in the early part of the season, that the officer charged with operations at it had failed, in the application of the funds, to produce any satisfactory result. He was immediately suspended and brought to trial. He is still in arrest, and no report as to the condition of the work has as yet been received at this department. This, although much to be regretted, will be attended with comparatively little injury to the public service, owing to the very slight influence which the position exerts in our system of coast defence.

Fort Pickens, Pensacola harbor, Florida.—The estimate submitted last fall for this work was at the time deemed amply sufficient to finish it, but the result has shown the amount was too low. This has arisen in part from the great difficulty in anticipating all the contingencies incident to bringing a work of such magnitude to a final completion, and partly from the delay and consequent additional expense in making the last appropriation, which did not become available till some time in June. Another appropriation has become necessary, and the objects to which it is proposed to apply the funds are, masonry, clay, sods, shells, carpentry, store-rooms, gates, magazines, a road and bridge. The work was to have been delivered over to a garrison, in excellent condition as far as completed, on the 1st of October last.

Fort on Foster's bank, Florida.—Ample preparations have been made for prosecuting this work with economy and despatch. Wharves, with other fixtures, and quarters, have been provided; a large amount of materials has been collected, and a well organized force of mechanics and laborers engaged. The operations have been somewhat retarded by the exposed position of the work, which rendered it proper to limit the excavations for the scarp-wall during the month of September. This will not, however, be necessary after the 1st of October. The maximum estimate of \$125,000, submitted by the local engineer, contemplates the completion of the whole work by the end of 1835, which he considers altogether practicable with the facilities in the way of materials and workmanship at his command.

Fort Morgan, Mobile point, Ala.—This work has been finished according to the original plan, and is garrisoned.

Fort Livingston, Grande Terre, La.—The negotiation for the purchase of the site of this work, pending at the date of my last report, was, as anticipated, soon brought to a satisfactory termination. The purchase had been effected, and considerable preparation made for an efficient prosecution of the fort, when the works were suspended in consequence of a want of an officer of engineers to take the immediate direction of the operations. This occurred in July last, since which time nothing has been done further than to comply with the engagements entered into prior to the adoption of this measure.

Contingencies of fortifications.—Nine thousand three hundred and eighty-seven dollars and forty-two cents have been expended under this head during the fiscal year. This money has been applied to Fort McHenry, towers of Bienvenu and Dupre, Fort Jackson, Fort Hamilton, the survey of the fort at Provincetown harbor, and contingencies of the engineer department.

INTERNAL IMPROVEMENTS.—HARBORS AND RIVERS.

Chicago harbor, Ill.—The operations for constructing an artificial harbor at this point on Lake Michigan, have progressed in a most satisfactory manner considering the late period at which the appropriation became available, and the difficulties in a country just emerging from a state of wilderness to be overcome in procuring the necessary supplies of materials and workmen. The great importance of this improvement to the increasing commerce of the west is already felt—one hundred and eighty vessels having, between the opening of navigation and the 30th September last, arrived and discharged their cargoes at this point, to be distributed along the shores of the Mississippi, through the valley of the Illinois. That this improvement is destined to form an essential link in the most important thoroughfare between the lakes and the Mississippi country, there can be no manner of doubt, and for that reason I would recommend that it be perfected as rapidly as circumstances will permit.

La Plaisance bay, Mich. Ter.—The operations on this work were resumed late in the working season, because of the prevalence of cholera, and the consequent difficulty of collecting the requisite force. Hopes are entertained, however, that ere this they have been brought to a close, and the pier completed in the manner contemplated.

For the condition of the works on the south shore of Lake Erie, as well as the progress made in their construction, I beg leave to refer you to the report of the general superintendent herewith appended, marked D.

Genesee river and Big Sodus bay, Lake Ontario, N. Y.—Concurring fully in the views and suggestions of the immediate superintendent of the very important improvements at these places, I therefore beg leave to refer to his report, herewith appended, marked E, as furnishing a concise statement of their actual condition, and also submitting the agent's views with regard to their permanent preservation.

Oswego, Lake Ontario, N. Y.—The funds appropriated for the works at this place became available at so late a period that it was found impracticable to do more than to repair the injuries sustained by the storms of ice of the last winter, and to strengthen the mole by a deposit of about nine hundred cords of large stone. The unexpended part of the appropriation is supposed to be ample to meet the wants of the service for next year; no estimate for this work will therefore be submitted at this time. The sum of \$3,666 was appropriated at the last session of Congress for erecting a beacon-light at the end of one of the piers of this harbor. The application of this sum was committed to this department late in July last. The local engineer was accordingly instructed to carry into effect the object of the appropriation. It was soon found, however, that the sum appropriated would not accomplish the object, and for that reason the work was suspended till the facts could be made known and the further action of Congress obtained.

Monument on Steele's ledge, Penobscot bay, Me.—The sum of \$4,600 was appropriated at the last session of Congress for this structure. It became available too late in the season to admit of much being done during the present year. The measures proper to carry the intention of Congress into effect have, however, been taken, and the work will progress with as little delay as practicable.

Piers at Kennebunk, Me.—The damages sustained last winter by the pier on the western entrance into this river and the "Perch rock" pier were repaired during the last summer. Preparations have been made to commence early next season the construction of the eastern pier, for which an appropriation was made at the last session of Congress in a permanent manner. The lateness at which the appropriation became available rendered this postponement indispensable.

Merrimack river, Me.—The breakwater at this place has been strengthened by the addition of three hundred and twenty-four tons of stone placed at the end and sides most exposed to the violent action of the sea. The pier leading from Badger's rock to Salisbury shore, commenced in August, is two-thirds finished, and hopes are entertained that it will be completed before winter sets in. These improvements have sensibly benefited the navigation, and will afford a safe point of refuge to vessels which may be compelled by stress of weather to seek shelter in that neighborhood.

Deer island, Boston harbor, Mass.—All the works projected for the preservation of this island have been completed.

Provincetown harbor, Mass.—The season proper for prosecuting the works to preserve this important harbor having passed before the funds for this purpose became available, operations were, from necessity, postponed till the next spring, when it is hoped that at least two hundred acres will be planted in grass. Those parts of the beach heretofore worked on are represented as doing well.

Plymouth beach, Mass.—Five hundred feet of stone wall have been constructed since my last report on the west side of the breakwater at this place. Grass, to arrest the drifting sand, has been set out at various places on the beach to the extent of about 50,000 feet, and 1,870 feet of brush fence, having the same object, have been constructed. The general condition of the beach is represented as good. The local superintendent says his operations are attended with success, and believes that the estimate now submitted, amounting to \$700, will be sufficient to provide everything necessary to place the beach in a condition to require but little more, unless the inroads of the sea should produce a new state of things.

Hyannis breakwater, Mass.—Owing to the lateness of the season at which the appropriation for this work became available, but little progress could be made towards its extension during the present year. It is, however, represented as affording to the coasting navigation considerable protection, and as promising to be very effectual when completed.

Hudson river, N. Y.—At the last session of Congress \$70,000 were appropriated towards the improvement of this river from a point a little below Albany to Waterford. This sum was committed to this

department for application. The law making the appropriation designates the plan upon which the improvement is to be made. With the view, therefore, to take the measures proper to carry into effect the wishes of Congress, this plan was for the first time examined in this department; and the result of this examination is a serious apprehension that the plan is impracticable and totally inadequate to produce the desirable results for which it is plain the appropriation was intended. This may appear somewhat surprising, as the law refers to this plan in a way to induce the belief, on a casual examination, that the project had been sent to Congress for its action after having received the sanction of the War Department. Such is not, however, the case. The gentleman who projected this plan, being at the time a civil engineer in the employment of the general government, was required simply to make an examination of the river within the limits mentioned, with the view to procure all the facts in relation to the obstructions, which it is the object of this appropriation in part to remove. These facts, his instructions expressly stated, were to be laid before the board of internal improvement, to enable it to devise and mature a plan for the purpose. The examination seems only to have been made, however, to the extent deemed necessary by the gentleman charged with it, to enable him to devise a plan himself. This plan is that referred to in the law. Before it was submitted by its author, the branch of service to which he belonged was separated from this department, and, of course, his returns were not made to it, but to the Topographical bureau, where they were filed, and the subject never went before the board. Soon afterwards, March 15, 1832, it was resolved by the House of Representatives "that the Secretary of War be requested to communicate to this House the survey and report for the improvement of the Hudson river;" and on the 30th of the same month all the papers embracing the plan were sent up, without the expression of any opinion as to its merits or of the survey upon which it was based.

This improvement is one of the most important that has ever been committed to this department, and its difficulty is commensurate with the vast interests to be affected by it. Under these circumstances, it was deemed proper that a competent agent should be sent to the Hudson to verify the survey and to supply the defects of the drawings, after an examination into the natural causes which operate to produce the obstructions to be overcome; to report upon the plan devised to remove them; and, finally, to submit in detail such views as might be suggested by the nature of the difficulties. This seemed indispensably necessary, in order that the department might have some fixed and well-defined project upon which to go to work with the hope of success.

An officer of engineers, in whose ability the department has the utmost confidence, was therefore designated for the performance of this duty, and to manage the improvement generally; but owing to the crippled and totally inadequate force of the corps of engineers to meet the increasing demands upon it, it was found impracticable for some time to relieve the officer thus detailed from the duties with which he had been previously charged. After some delay, however, he was finally despatched to the Hudson, and is at present actively engaged in his new duties. It is hoped that the course pursued with reference to this improvement may prove satisfactory. It was adopted from a conviction of its necessity, and a strong belief that it will be found in the end to have expedited the work, and to have saved a large amount of money from total loss. It is probable that the proper plan for prosecuting this improvement may differ widely from that alluded to in the law. In which event some further legislative action on the subject will become necessary before the funds now available can be expended. As soon as the subject shall be matured it will be submitted, that such further measures may be taken as circumstances may seem to you to render proper.

Harbors of Newcastle, Marcus Hook, Chester, and Port Penn, Delaware river.—No report in reference to these improvements has as yet reached the department, and for the reason, no doubt, which has operated to delay the report for Fort Delaware, the same officer being charged with both.

Ocracoke inlet, N. C.—The report of the officer charged with the improvements at this place is herewith submitted, (marked F.) It possesses considerable interest, and I would therefore respectfully call your attention to it.

Cape Fear river, N. C.—The appropriations for the improvement of this river having exceeded the original estimates without being attended with any permanent benefit, and the local engineer having suggested a system of improvement requiring further appropriations, his report is herewith appended, (marked G,) to which I beg leave to call your attention.

Savannah river, Ga.—The requisite surveys to ascertain the extent of the obstructions to be removed for the improvement of this river have been completed, and a return thereof submitted to the consideration of Congress at its last session. The dredge and tow-boats and mud-flats, with machinery, are in a forward state of preparation; and it is anticipated that the operations for clearing the channel will be commenced at an early day with much force and vigor.

Inland pass between the St. John's and St. Mary's, Florida.—Nothing has been done as yet at this place, and for reasons stated in my last annual report. The result would have been the same, however, even if one or more of the dredging boats in operation under the department on that section of the coast had become available for this improvement, for the department had no officer whose services were not imperiously required elsewhere.

Ochlochney river, Florida.—The expenditures on this river have been directed to the removal of the rafts and trees which obstructed its navigation. The river is now open for a distance of one hundred and fifty miles from its mouth.

Appalachicola river, Florida.—The improvement of the Appalachian harbor to the opening of the "straight channel" has been attended with great success. Vessels of the largest class, trading in that quarter, now pass up to the wharves of the town. It remains to be determined whether it will be necessary to obstruct the other outlets of the river to force the water more effectually into the new channel. Should this become necessary there are abundant funds available to effect it.

St. Mark's river and harbor, Florida.—The want of funds during the last year, and the high waters of the present, have retarded very considerably the operations for the improvement of the river. The works on the river are for the present suspended. Similar causes, joined to the prevalence of disease, have operated to the prejudice of the harbor improvements. All unnecessary delay will be avoided to bring these works to a close.

Escambia river, Florida.—Soon after the appropriation was made for the improvement of this river the work was put under contract, subject to the general supervision of an officer already charged with several works of equal and perhaps greater importance, because the department had no officer in whose immediate charge it could be placed. The department is now informed that the contractors have failed to fulfil their engagements. Up to the middle of December last they had but partially cleared a small

portion of the river of its obstructions, when their operations were arrested by high water, which continued from that time to the close of August. In consequence of the dilatory proceedings of the contractors last year, and their having made no preparations to resume operations the present, it was determined, in August last, to take the work out of their hands, and to prosecute it with hired labor. The exorbitant price asked for labor at that time was, however, a source of further delay, and the probability now is that, notwithstanding the work may have been commenced, as was expected, on the first of October, it may not have been with sufficient force to finish it before the winter freshets begin. All of this difficulty, which cannot but be attended with a sacrifice of much money, would have been avoided if an officer could have been spared to take the immediate direction of the improvement in the first instance. The further prosecution of the work has been, from necessity, transferred to the Quartermaster's department.

Mobile harbor, Alabama.—As anticipated in my last report, the operations at this place were, early in the present year, brought to a satisfactory termination. The channel through this pass is one hundred feet wide and ten deep. Vessels navigating the bay have now a direct passage into port, and are no longer obliged to reach it by the circuitous route of the Spanish river. The width of the channel was, however, soon discovered to be insufficient to admit the free passage of vessels with adverse winds; and, to avoid this difficulty, an enlargement to three hundred feet was recommended. An appropriation of \$10,000 was accordingly made, at the last session of Congress, to effect this object. In taking the usual measures to apply this money, it was soon perceived that the machinery used under former appropriations was out of order and very much worn, requiring extensive repairs to render it useful. That the funds might not be exhausted in making these repairs the work was put out to contract. The contractor, having expressed fears of not being able to make the improvement for the price stipulated, was desirous of being released from his obligation; but this having been refused him on the part of the government, because of the great delay occasioned by his having taken the contract, it was hoped that he had commenced the work, as it was believed that, with proper management and economy, he could have accomplished it for the contract price and obtained a fair profit. A letter has just been received, however, communicating the determination of the contractor to have nothing to do with it. To repair the old machinery of the government and prosecute the improvement by hired labor the funds would be insufficient. An additional appropriation will, therefore, be necessary, and it is to be regretted that this information did not reach the department in time to include the amount in the regular estimate. It is \$18,000.

Pascagoula river, Mississippi.—The difficulties with the contractor, referred to in my report of last year, still continue to a certain extent to exist, and to retard the operations of the improvement at the mouth of this river. The work is progressing, yet so slowly and so little to the satisfaction of the general superintendent, that he proposed, should no improvement in this respect have taken place by the first of this month, to resort to legal measures to abrogate the contract; after which the work will be prosecuted either by hired labor or a new contract, under penalties that will insure its execution. The available funds are supposed to be ample to effect the object.

Ohio and Mississippi rivers.—For the information as to the state of the improvements in these rivers, I beg leave to refer you to the reports of the officer charged with their general superintendence. They are appended, marked H, H 1, and H 2.

Red river, Louisiana.—Operations on this river were suspended last fall for want of funds. The appropriation for their further prosecution was made at so late a period as to render it impracticable to do anything during the last summer. The agent charged with the improvement has, however, made all the necessary preparations to prosecute the work with despatch, to the extent of the available means, and is no doubt at the great raft cre this.

Arkansas river, Arkansas Territory.—The operations for the improvement of this river were prosecuted last winter till the funds were exhausted. They extended from the mouth of the river to Little Rock, a distance of 250 miles. Within these limits 1,557 snags were taken from the channel, and 3,370 snags and logs cut from the sand bars, and under the banks within the bed of the river. The navigation has been much benefited, but there is yet much room for improvement.

Cumberland river.—The operations for improving the navigation of this river have, since the date of my last report, been directed to strengthening the wing dams at Flax Patch bar, the head and foot of Harpeth island, and to quarrying and removing the rock from the channel way of Harpeth shoals, the bottom of which is stated to be reduced to an even surface, and to have more water over it than the sand bars below. A number of the most dangerous snags have been removed from the bed of the stream between the shoal and Line island. A conglomerate of gravel and iron ore, forming a ledge in the channel of the Devil's chute, at a place where it is but twenty-seven feet wide, has been in part taken out, and the whole will most likely be removed this fall. After this the force will be concentrated at Line island to raise the steamer President, wrecked last June in the channel at that place.

LIGHT-HOUSES AND BEACON-LIGHTS.

The appropriations for the lights at Huron, Grand river, Cunningham creek, Ashtabula creek, Conneaut creek, in the State of Ohio; Genesee river, Big Sodus bay, and Oswego, in New York; and Goat island, Rhode Island, were referred for application to this department. Measures have been taken to apply the funds for the first five named, but those for the latter not being sufficient to accomplish anything of a permanent and substantial character, it was deemed proper to wait the further action of Congress in the matter. The reports, with estimates of the agents at Genesee, Big Sodus, Oswego, and Goat island, have been referred to the proper department, that they may, if deemed necessary, be laid before Congress.

ROADS.

Roads from Detroit to Fort Gratiot, Saganaw, mouth of Grand river, and Chicago, in the Territory of Michigan.—No appropriations having been made at the last session of Congress for the continuation of these roads, operations on them were, of course, limited to the funds remaining to be applied from the appropriations of the previous year. Estimates for the completion of the first and continuation of the others will be submitted.

Road from La Plaisance bay to the road leading from Detroit to Chicago, Michigan.—Circumstances have conspired to render the last season one of the most unpropitious for the progress of this road. The continued rains of last fall and spring, and the prevalence of disease throughout the Territory during the summer, retarded the work to a very considerable degree. Eighteen and a half miles have, however,

been finished in portions at different points of the route, and eight and a half are in progress, with fair prospects of being completed this season, leaving twenty and three-quarters miles unfinished, for which an estimate will be submitted. Such portions of the road as are done are represented as having been well executed, and upon very reasonable terms.

Roads from Clinton to the rapids of Grand river; from Sheldon to the mouth of the St. Joseph's; from Niles to the same point; from Port Lawrence to Adrian; and from Vista to the Indiana State line, Michigan.—The appropriations for these roads having been referred to this department, the necessary instructions have been issued to apply them in a manner to meet the views of Congress. No returns having been received from the agents, it is impossible to state, at this time, how far operations have progressed.

Road from Line creek to the Chattoohoclie, Alabama.—No appropriation was made for this road at the last session of Congress. The unexpended balance of the former appropriation has been applied during the year, and an estimate for continuing the operation to the completion of the road will be submitted.

Road from the north boundary line of Florida to Appalachicola, Florida.—A topographical engineer is now engaged in making a survey of the route of this road, in conformity to the requirements of the law. The survey not having been finished, nothing has been done, of course, towards construction.

Road from Memphis to the St. Francis river.—The returns of the survey of this road did not reach this department till the 18th of June last. It was, therefore, not till the 25th of July that the preliminaries necessary to enter into the object of the appropriation could be accomplished. A re-examination and survey of the route were then made, and advertisements issued for proposals to construct by contract. In the meantime the requisite subdivisions of the route to be embraced by the contracts were marked off; and the superintendent now reports that the work contracted for has progressed to his entire satisfaction, the contractors evincing every disposition to prosecute their engagements with energy, and giving little apprehension that any of them will be forfeited from failure or other cause. Nine miles of the distance, over the worst part, are nearly completed, and on the remaining distance of sixteen miles the work is progressing well. The agent represents the necessity of forcing his operations, this being required by the great emigration to Arkansas, that has no other road by which to reach its destination. This being also consistent with economy, he has accordingly submitted an estimate of the sum required to complete the road, which, together, with the amount appropriated, will make the total cost less than the original estimate.

Cumberland road in Illinois and Indiana.—Little or nothing has been done on the national road in these States, in the way of extension, since the date of my last annual report. For reasons then stated, with regard to the road in Illinois, and in consequence of the increasing difficulties on that in Indiana, it became a matter of great importance to limit the expenditures in these States to the fulfilment of existing contracts, in the hope that some legislative action might be had that would produce a better state of things. This hope was only realized in the month of June last, after a great portion of the best part of the working season had passed. An officer of engineers, possessing much experience, was designated, with as little loss of time as practicable, to take charge of the work. He has been engaged, since his arrival on the road, in ascertaining the state of its affairs, and in organizing an efficient force for the active prosecution of operations. His annual report has not yet reached the department. This is, doubtless, owing to the sickness with which he has been much afflicted during the past summer; but, as soon as it is received, it shall be laid before you.

Cumberland road in Ohio.—For the condition of that portion of this road yet in the hands of the general government, as well as for the progress made in its construction, I beg leave to refer to the report of the superintendent herewith submitted, marked I.

Cumberland road east of the Ohio.—No report on the present condition of this road has been received. This is to be attributed to the causes referred to under the heads of Fort Delaware and harbors in the Delaware river—all appertaining to the superintendence of the same officer.

Northern boundary of the State of Ohio.—Observations for the determination of this line were prosecuted last summer to the extent that the available means would allow. The results have not yet been communicated, and for the reason that the officer who made the observations has as yet had no time to complete his calculations, having been constantly occupied with duties that would not admit of delay. Indeed, it is impossible to say when they can be looked for; certainly not till the examination of the Hudson shall be made. The same officer is now charged with both.

Monument to the memory of General Brown.—This is nearly completed. It was put under contract in New York soon after the appropriation was made. It will be in its place by the 1st of January, at furthest.

Basement story of War Office.—The appropriation for fitting up the basement story of the War Office has all been applied to the objects for which it was made.

The lithographic press of the War Department has been employed during the past year in the usual way.

Military Academy.—This institution continues to sustain its high reputation, as is shown by the report of the board of visitors who attended the last annual examination of the cadets. The report is submitted herewith, marked K. I visited the academy in September.

The board of engineers.—The duties of the board have been the same as heretofore.

Office of the chief engineer.—The current business of the office is of the same character as heretofore, though somewhat increased in consequence of the additional works referred to the Engineer department.

The subject of an increase of the corps of engineers has been so repeatedly and earnestly urged on the attention of the War Department and of Congress without finding any remedy for the evils as frequently referred to, that I almost consider it out of place to renew it here. The palpable inadequacy, however, of this arm of service to meet the numerous requirements of Congress still leaves room to hope that, if the facts are fairly stated and understood, the labor and responsibility annually thrown upon the department will either be diminished or its force made commensurate with them. This is not to be understood as a complaint that Congress require too much; it is a candid declaration of what is really the fact, that all they require cannot be accomplished with the present means. What are the facts?

Ninety-one different appropriations, amounting to more than two millions of dollars, have been referred to this department for application within one fiscal year; and to accomplish this, and to meet all the responsibility which it involves, the department is provided with only *twenty-seven* officers whose services can, with certainty, be commanded; and of these about one-third have had no experience. The consequence is that works of the utmost importance, with large sums of money, are committed to the hands of agents unknown to the department, with no certainty whatever that the one will be properly managed or

the other faithfully applied and accounted for. Besides, these agents are very numerous; their compensation is drawn from the appropriations under which they are employed; citizens acting in the responsible capacity of constructing engineers and disbursing agents must be well paid, and hence large amounts of many of the appropriations are diverted from their proper objects and applied to the payment of salaries. But if this was the extent of the evil it would be comparatively unimportant.

Large sums are lost for want of sufficient agents qualified to project and execute plans for the improvements ordered by Congress. A reference to the numerous reports on the failure of works, particularly to my last annual report, will abundantly show that this remark is not induced by any hypothetical case. It is unfortunately the suggestion of experience; so that, besides being executed badly as to durability, and, as regards neatness and appearance, in a manner little calculated to do us any credit, many of our public works cost on an average at least fifty per cent. more than they would under a different arrangement. There is certainly no economy in this. Enough money has been wasted within the last few years to have supported a corps of professional engineers sufficient for the proper management of all the national improvements in the country.

The completion and the consequent advantages expected from our public works are, moreover, retarded and deferred by the operation of the same causes. One million and seventy-six thousand dollars of the appropriations made and referred to this department in the beginning of 1833 remained unexpended at the end of that fiscal year. The sum of one million seven hundred and ninety-nine thousand dollars and upwards, applicable to the works of fortifications and internal improvement, was withdrawn from the treasury on the 1st of October.

A comparative view of the face of our country twenty years hence, improved under the present system and that proposed, with the same amount of money, if such a thing were possible, would present a difference in favor of the latter that could not fail to impress every mind feeling the least interest in the subject with the extravagance of our present mode of doing business.

The evils here complained of cannot be remedied by any system of supervision at this place, however vigilant. The character of every work of improvement, if it satisfy the object of its creation, must necessarily depend upon circumstances peculiar to its locality and the end to be attained. These can only be understood and appreciated by those possessing an acquaintance with the sciences, and a professional experience which cannot be expected from persons who may be induced in advanced age to quit other pursuits to commence the subject of engineering from considerations of mere pecuniary gain; yet the department must act and authorize expenditures upon information derived from agents of this description, or, what in many cases might be better, cease to act at all.

An efficient and economical execution of the will of Congress in matters referred to the Engineer department can only be expected from a regular and well-constituted corps of professional men whose interests shall be identified with a faithful performance of the duties required of them. This cannot be looked for under the present state of things.

An effort has been made to organize a system of inspection, by which the errors of inexperience might be corrected before they could lead to consequences of a serious character; but the only officers fitted by skill and experience for such duty being literally broken down by the mass of labor already heaped upon them, the effort proved unavailing. There is not one of these officers who is not charged with the responsibility of conducting some half dozen works at the same time, leaving them little time for study, and less for the relaxation absolutely essential to health.

For the reasons stated, it is recommended to increase the present corps of engineers to the extent deemed absolutely essential to meet the wants of the department. The plan of increase proposed would add annually three members to the lowest grade of the corps till it should attain the form and organization presented in Senate bill No. 78, of the session of 1829-'30, as amended and reported by the Committee on Military Affairs, 12th February, 1829. This bill is as follows:

A BILL providing for the gradual increase of the corps of engineers, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President of the United States be, and he is hereby, authorized to add to the corps of engineers, whenever he may deem it expedient to increase the same, one lieutenant colonel, two majors, six captains, six first and six second lieutenants: *Provided,* That not more than three lieutenants shall be added annually over and above the number necessary to fill vacancies which may occur in said corps until the whole corps shall take the form and organization above prescribed.

Sec. 2. *And be it further enacted,* That the pay and emoluments of the officers of the said corps shall be equal to those allowed to the officers of the light dragoons, under the act of the 12th of April, one thousand eight hundred and eight, except so far as relates to the rations allowed to the captains and lieutenants by said act; in lieu of which the captains and lieutenants of said corps shall be entitled to receive the same subsistence as is now allowed to the other corps of the army; and that, in cases in which forage is not drawn in kind, the officers of the said corps shall be entitled to receive, in lieu thereof, eight dollars per month for each horse which said officers may, by their rank, be entitled to keep.

Sec. 3. *And be it further enacted,* That so much of the act passed the twenty-ninth day of April, one thousand eight hundred and twelve, entitled "An act making further provision for the corps of engineers," as provides that one paymaster shall be taken from the subalterns of the corps of engineers, be, and the same is hereby, repealed; and that the paymaster so authorized and provided be attached to the Pay department, and be in every respect placed on the footing of other paymasters of the army.

Sec. 4. *And be it further enacted,* That the officers authorized to be appointed by this act be subject to the rules and articles of war as they are now, or may be hereafter, established.

Sec. 5. *And be it further enacted,* That all letters and packets to and from the chief engineer, which may relate to his official duties, shall be free from postage.

All of which is respectfully submitted.

C. GRATIOT, *Brigadier General, Chief Engineer.*

A.—Table exhibiting the fiscal concerns of the Engineer department for the year ending September 30, 1834, in which the funds that had accrued within that period, and the manner of their accruing, are stated and accounted for by showing their application; and showing also the amounts expended upon the several works under construction.

Designation of the appropriations and the objects to which they are applicable.	Available for 1834, and whence derived.			Amounts available accounted for.			
	From appropriations for 1833.	From balances remaining underworn from the treasury, and remaining in the hands of agents, on the 30th of September, 1833.	Aggregate available.	Amount applied, corresponding with the amount of accounts rendered for settlement to the 30th of September, 1834.	Amount undrawn from the treasury October 1, 1834.	Balances in the hands of agents October 1, 1834.	Aggregate accounted for, corresponding with the aggregate available.

C.

Statement exhibiting the works projected by the board of engineers which have not been commenced, and the estimate of their cost.

FIRST CLASS—TO BE COMMENCED AS SOON AS POSSIBLE.

Designation of the works.	Estimate.
Fort St. Philip, Louisiana.....	\$77, 810 79
Fort at Sollers's Point flats, Patapsco river.....	673, 205 44
Fort Tompkins, New York.....	420, 826 14
Redoubt in advance of ditto.....	65, 162 44
Fort at Wilkins's Point, New York.....	456, 845 51
Fort at Dumpling's Point, Rhode Island.....	759, 946 57
Fort at Rose island, Rhode Island.....	82, 411 74
Dike across west passage Narraganset roads.....	205, 000 00
For the defence of Boston harbor:	
Fort on Nantasket head.....	539, 000 00
Lunette in advance of ditto.....	79, 000 00
Redoubt No. 2, in advance of ditto.....	32, 000 00
Redoubt No. 1, (on Hog island,) in advance of ditto.....	29, 000 00
Dike across Broad Sound Passage.....	140, 000 00
Cutting off the summit of Gallop island.....	2, 429 00
Narraganset bay, Rhode Island, (works for the defence of Conanicut island).....	220, 053 43
	3, 782, 691 06

SECOND CLASS—TO BE COMMENCED AT A LATER PERIOD.

Designation of the works.	Estimate.
Tower at Pass au Heron, Bay of Mobile.....	\$16, 677 41
Fort at Hawkins's Point, Patapsco river.....	244, 377 14
Fort at St. Mary's, Potomac river.....	205, 602 33
Fort opposite the Pea Patch, Delaware river.....	347, 257 71
Fort at the Middle Ground, outer harbor of New York.....	1, 681, 411 66
Fort at the East bank, outer harbor of New York.....	1, 681, 411 66

SECOND CLASS—Continued.

Designation of the works.	Estimate.
Fort Hale, Connecticut	\$31, 815 83
Fort Wooster, Connecticut.....	27, 793 34
Fort Trumbull, Connecticut.....	77, 445 21
Fort Griswold, Connecticut.....	132, 230 41
Fort on Fort Preble Point, Portland harbor, Maine.....	103, 000 00
Fort on House island, Portland harbor, Maine.....	32, 000 00
Fort Pickering, Salem	116, 000 00
Fort for Nangus Head.....	35, 000 00
Fort Seawell, Marblehead.....	116, 000 00
Fort for Jack's Point	96, 000 00
Fort on Baldhead, North Carolina.....	120, 000 00
Fort on Federal Point, North Carolina.....	12, 000 00
	5, 075, 982 70

THIRD CLASS—TO BE COMMENCED AT A REMOTE PERIOD.

Designation of the works.	Estimate.
The rafts to obstruct the channel between Forts Monroe and Calhoun	\$240, 568 00
Fort on Craney Island flats.....	258, 465 14
Fort at Newport News	244, 337 44
Fort at Naseway shoal	673, 205 00
For the defence of Patuxent river:	
Fort on Thomas's Point	173, 000 00
Fort on Point Patience	164, 000 00
Fort on the Narrows of Penobscot river, Maine	101, 000 00
	1, 854, 575 58

RECAPITULATION.

First class, (15).....	\$3, 782, 691 06
Second class, (18).....	5, 075, 982 70
Third class, (7).....	1, 854, 575 58
	10, 713, 249 34

REMARKS.—The classification in this table, distinguishing three periods, exhibits the works enumerated in the order of their efficiency to meet the earliest possible emergency.

D.

ERIE, Pennsylvania, October 20, 1834.

SIR: In compliance with the orders and regulations of the Engineer department, the following report in relation to the public works of internal improvements on the south shore of Lake Erie is most respectfully submitted:

Huron harbor, Ohio.—The appropriation was made so late in the season, and the cholera appearing immediately after, (everywhere more or less upon the lake shore,) that the prosecution of the public works was greatly retarded here, as at every other place under my charge, rendering it very difficult to procure materials and laborers to carry on the works to advantage. Therefore at this place little as yet has been done this year except to procure materials. They are now in readiness to sink one pier, and before the close of the season hope to sink three more, extending the piers 120 feet further into the lake. The appropriation is considered sufficient for all that the works will require until it should be thought proper to commence the mason work, except so much additional expense as may be required to make repairs. The works remain in good condition. The depth of water the same as last year—eight feet at its shoalest place.

Black River harbor.—The money that has been expended this season has been applied in deepening the channel and procuring materials for extending the works further into the lake. About 860 cords of gravel and sand have been removed, and a further removal is expected to be made so as to give nine feet of water at the close of the season; 125 sinking logs and 75 ties are already prepared and framed for sinking, and will be put down as soon as the spring opens and the weather permits. The estimates made out by the superintendent for extending the piers 150 feet is two cribs more, or 60 feet further than was calculated in the last annual report. This additional extension, I think, may be dispensed with,

which will reduce the estimates two-fifths, making the appropriation called for to complete the works at \$3,598. The estimate accompanies the report, marked A.

Cleveland harbor, Ohio.—The present appropriation is deemed to be as much as will be required for the works this season and for 1835. The piers are extended into the lake the whole distance contemplated. The labor and materials now applied are for strengthening the works and keeping them in repair. The depth of water remains as last year—from ten to eleven feet. All the timber above water in these works is going fast to decay, and will require renewing from time to time, until the piers become so well based as to warrant the safety of the superstructure of solid mason work which is expected to result in the security of the whole. The amount estimated to complete the works in a permanent manner is \$125,320. For the details I refer you to the estimate made out by the superintendent, accompanying the report, marked B.

Grand river, Ohio.—The progress, condition, and disbursements, as well as the several estimates, have not been reported to me. They may have been to the department. In August they were filling the piers with stone where they had settled and placing stone on the outside.

Cunningham creek, Ohio.—No appropriation was made at the last session of Congress for extending or securing this work, though much wanted. If the old pier is not repaired next season it will go to ruin. The appropriation for Beacon light-house has been applied to the object and will be completed in this and the next month. For the estimates for strengthening, securing, and completing this work, I would refer you to the estimates and remarks of the superintendent, marked C.

Ashtabula harbor, Ohio.—The labor on the harbor this season has been applied principally in removing the rock and gravel which obstruct the channel. The machine for cutting up the rock and the dredging-machine for taking it out operate to great advantage. A new scraper has been constructed this season on a larger scale than the old one, taking out rock weighing from one to two tons. About thirteen thousand tons of stone and gravel have been removed this season. A depth of water is obtained from eight to nine feet alongside the east pier. The rock in the channel between the piers dips to the east from three to eight feet. The present appropriation is considered sufficient for removing all the obstructions in the channel within the piers. The contemplated additional 150 feet of diverging piers is expected not only to give greater safety to vessels entering the harbor, but to remove, by an increase of current, a shoal that now lies in the lake a short distance without the piers. The cost is estimated at \$7,591. For the estimates in detail for constructing these 150 feet of piers permit me to direct your attention to the last annual report. From a register kept since the 1st of May last it appears that 531 vessels have touched at this port this season, showing a very great increase of business, as, but a few years ago, I am informed, the arrivals would not exceed half a dozen the whole season.

Conneaut harbor, Ohio.—The small sum that was left of last year's appropriation is nearly or quite expended. It has been applied in repairing the works and deepening the channel. This sum has not been sufficient; 760 cords more of stone are required to fill in the piers where they have settled and to add to the stone on each side of the piers to strengthen the works, amounting to \$3,040; also, for extending the piers 100 feet further into the lake to a shoal, \$5,360, making, in the whole, \$8,600. For the estimates, see statement D.

Presque Isle harbor, Pennsylvania.—The depth of water at the entrance is the same as last year, twelve feet, and from thence to the borough piers nine and a half feet at its shoalest place. The borough piers are now made convenient for boats to lay alongside, land their passengers, discharge their loading, and take in wood, and are found more convenient than the United States works. The inlet across the Presque Isle, near the west end of the harbor, presents no appearance of any change since the survey was taken on the 1st of August, and communicated to the department on the 12th of the same. No sensible effect has since been produced by this inlet on the eastern entrance of the harbor. The effects of the currents and counter-currents on the sand on which the piers are placed, render any estimates that can be made for completing them uncertain. The currents, which are constantly setting in or out of the harbor at the rate of from two to three miles an hour, and frequently changing every hour, have a powerful effect in removing the sand. In my annual report I submitted the estimates for closing the breach at the junction of the south breakwater and pier. The quantity of stone then estimated for the object being five hundred cords, double the quantity of stone then estimated will be required. Eight hundred cords have already been placed in the breach, and two hundred cords more, according to calculation, will be required, making, in the whole, one thousand cords. The stone have been thrown in on a line with the piles and suffered to roll down and graduate themselves. At the extremity of the bar there is now thirty feet of water. In many other places deep basins have been worn and will swallow up more stone than was calculated. Other places alongside of the breakwater have filled up with sand, where there was a depth of from six to eight feet and a breach formed for several rods. The breach in other places has disappeared and a basin formed six to eight feet deep; these changes have taken place in several instances within the last two years. What will be the effects of placing stone on each side of the piers and breakwater time alone can determine. I am of opinion that this is the only method that can be adopted to give strength and permanency to the work; furthermore, as fast as the stone within the piers or breakwater, or on the outside, settle, to bring them up to their proper height by adding more, and continuing the supply until a firm base is secured. When this important end is gained and a superstructure of solid mason work executed the whole length of the piers and breakwaters, the work may be considered complete, when the constant watchfulness and repairs which they now require may, in a great measure, be dispensed with.

From calculation, 1, 000 cords of stone, in addition to the estimates of 1833, will be required for 1835, amounting, with the contingencies, to \$5,000; this sum, with the balance now remaining, will be sufficient for all expenditures previous to commencing the mason work.

Two valuable quarries of stone, which promise a large supply for constructing these works, have been opened this season on the margin of the lake within one mile of the piers. The stone can be taken by scows direct to the works without the expense of carting. The stratum has a smooth surface of equal thickness, is from 18 to 20 inches thick, and can be easily wrought to any length or breadth required. Stone of this description, and so conveniently situated, will greatly facilitate the operation of the mason work.

An estimate of the stone, lime, and mason work required for the top of the piers and breakwaters, commencing at low-water mark, at the harbor of Presque Isle.

South breakwater 3,450 feet in length, 8 by 3 feet in length.....	Cubic feet.	58,800
North breakwater 3,000 feet in length, 8 by 3 feet in length.....		72,000
South pier 800 feet in length, 14 by 4 feet in length.....		44,800
North pier 1,250 feet in length, 14 by 5 feet in length.....		87,500
		<hr/>
		263,100
		<hr/>
263,100 cubic feet, estimated at 12½ cents per cubic foot, delivered at the works.....	\$32,887 50	
All the stone to be large, none less than half a ton. Coping for breakwaters to be 8 feet in length, and for piers 7 feet; 1 barrel of water lime for every 128 cubic feet of wall is 2,055½, at \$2 per barrel.....		4,111 00
Laying 263,100 feet of masonry, at 6 cents the cubic foot, furnishing their own sand.....		15,786 00
Superintending, say.....		2,000 00

		<hr/>

Dunkirk harbor, New York.—In order to give a full view of the condition of this harbor, and the amount of funds necessary for repairs, and for extending the piers and breakwater, I would refer you to the estimates and remarks of the superintendent, marked E.

Buffalo harbor, New York.—These works approximate nearer to completion than any other on the south shore of Lake Erie. Much commendation is due to the superintendent for the skill, industry, and perseverance with which he has prosecuted this object. There is ten feet water in the channel, so that no vessel need ever be detained except for a very short time, when the water is lowered by the most severe gales from the east, which very rarely occur. Much labor has been directed this season to removing the stone and rubbish of the old piers which impeded the landing of boats alongside the south pier. The diving-bell has been constantly and successfully employed all this season. It is, however, a slow operation, and will take to the middle of next summer to remove all the obstructions caused by the old pier. The front wall of the towpath of large stone, in water lime masonry, about seven hundred running feet, and a corresponding amount of towpath flagging, has been completed; several yoke of oxen, with road scrapers and dredging machines, with other facilities, have been constantly employed in excavating and removing the sand within the harbor opposite the old light-house. No additional appropriation will be required for 1835; the present amount available is deemed sufficient to complete the works.

Black Rock harbor.—A portion of expenditures that have been incurred this season has been to strengthen the works on Bird island, and the transverse piers, but mostly in the construction of a new pier, for which the appropriation was principally designed, to protect the harbor against the influx of the sand along the lake shore, and at the same time to shield it against the reaction of the surf. This work is putting down in the lake, where the depth of water is from 18 to 20 feet, and in front of a beach, which is much exposed to the wind and waves. The exposed situation renders the progress of the works slow, but a sufficient length of pier will be put down to show the effects, and can be prosecuted should the result prove favorable. The funds are considered sufficient—\$5,000 for this year's service and \$7,000 for 1835.

With respect to the amount of expenditures for the fourth quarter of the present year, and for 1835, likewise for completing the works, I would remark that although I have directed your attention to the estimates made out for the several works, it is with no expectation that any certainty is attainable. The utmost that can be known must rest upon a mere probability; winds that seem light upon the land often so agitate the waters of the lake, that little or no work can be done, and days together the laborers are obliged to lay by waiting for a calm to sink a crib or unload a scow of stone. Until the main object is made certain, namely, a permanent foundation, and the superstructure completed, there will occur expenditures for repairing the timber exposed to the weather above the low-water mark, of which it will be difficult to make an estimate, as timber thus situated is not regular in its decay, and is also much exposed to being removed by heavy storms and other casualties—the stone wall of mason work that is eventually to be erected upon the several piers and breakwaters commencing upon an unstable bottom; but still the forwarding operation of the laborers must depend greatly upon the weather. Therefore any estimate that is or can be made as to time and cost must rest upon contingencies. How soon a secure base on which to raise a superstructure can be obtained for the several works now in progress, experience shows that it is impossible to foresee; but that it can in the end be obtained there is no reasonable doubt. The successful operation at Buffalo will warrant the expectation of the same result when a proportionate amount of labor and materials has been applied.

I am happy to say that the present condition of the harbors affords great security to the shipping and encouragement to enterprise, as the increased amount of vessels and business will show. Last season there were fourteen steamboats constantly employed in transporting passengers and merchandise; this season the number of steamboats has more than doubled, besides a great increase of other shipping.

Very respectfully, your obedient, humble servant,

JOS. D. SELDEN, *Agent.*

Brigadier General C. GRANT, *Chief Engineer.*

A.

The superintendent of the public works at Black river has furnished an estimate of the funds required for the service of the year 1835. The following is a copy :

Amount of stone required to fill 5 piers 30 feet long, 16 feet wide, 16 feet water.....	\$1, 500 00
200 sinking logs.....	200 00
400 ties.....	150 00
Labor for same.....	475 00
Iron bolts for same.....	100 00
Plank and spikes for same.....	100 00
300 feet cap logs.....	24 00
60 piles.....	180 00
Securing east pier angle.....	500 00
Dredging out channel.....	3, 000 00
Stone for securing east and west piers.....	3, 100 00
	9, 329 00
Deduct from the above the appropriation of 1834 not expended, and applicable to the service of 1835.....	2, 000 00
	7, 329 00

I certify that the above estimate is correct, and that that amount will be necessary to finish the same.
JNO. MYERS, *Superintendent.*

B.

Estimate of funds required for securing and rebuilding the public works constructing at the mouth of Cuyahoga river, in the State of Ohio, in a permanent and durable manner, with stone.

Nature of workmanship, materials, and contingencies embraced in the intended application of the funds required for the works.	Extent.	Cost.
Perches of stone, at 75 cents.....	120, 000	\$90, 000 00
Feet of coping stone, at 25 cents.....	18, 000	4, 500 00
Piles, at \$1.....	1, 700	1, 700 00
Rebuilding, piling, engine, and boats.....		900 00
Laborers, 8 months each, 4 years, at \$22 per month.....	20	14, 080 00
Master masons, 32 months, at \$50 per month.....	1	1, 600 00
Bushels of lime, at 20 cents per bushel.....	10, 000	2, 000 00
Sand.....		500 00
Iron and blacksmithing.....		3, 000 00
Horses, at \$60 each, and keeping 4 years, at \$50 per year each.....	4	1, 040 00
Superintendent, 4 years, at \$1,000 per year.....	1	4, 000 00
Contingencies.....		2, 000 00
		125, 320 00

REMARK.—In this estimate it is expected that the stone will be laid in solid masonry, in the place of the wood work that now supports and is a part of the present piers.

CLEVELAND, *October 1, 1834.*

A. W. WALWORTH, *Agent.*

C.

HARPERSFIELD, *Ohio, October 8, 1834.*

SIR: I herewith transmit my quarterly account and accompanying vouchers for the quarter ending September 30, 1834, and also report herewith the progress of the public works at Cunningham creek, Ohio, which are under my charge; and also subjoin the estimates for the further extension and completion of the works which will be necessary to be provided for by appropriation for the year A. D. 1835, at that place, &c. 1st. The beacon light (which is the only work in progress at Cunningham creek this year) is now nearly completed, and is supposed might be lighted by the 15th of November next if thought advisable; the appropriation of \$2,000, which was made at the last session of Congress, is deemed sufficient for the erection of the tower and light, which are already nearly finished, and also that part of the foundation on which the tower now stands. But a further sum is necessary in order to finish and secure the foundation by stone, without which the beacon must soon be injured and go to ruin. The estimate of the stone necessary to secure and finish the foundation next year is as follows: 250 cords of rock, at \$5, \$1,250

It is supposed that the stone can be placed around the work at the above price, and that amount is absolutely necessary in order to secure the light.

2. The further appropriation is also necessary to finish and secure the present pier and pier head at this place, neither of which is finished, nor are they secure as they now remain; neither is the pier head in any way at present attached to or connected with the present work, owing to no appropriation having been made at this place for the last year. The following is an estimate for finishing pier head and repairing present pier, to wit:

Stone to fill up piers, 150 cords, at \$4 per cord.....	\$600 00
1,200 feet durable timber, at 5 cents per foot.....	60 00
6,000 feet of plank, at \$10 per M.....	60 00
300 pounds of spikes, at 12 cents per pound.....	36 00
For labor and board of hands.....	300 00
	<u>1,056 00</u>

Which sum of \$1,056 is necessary in order to secure and finish the present pier and pier head agreeably to the first and original plan adopted by the late Major Maurice; and it is necessary also to connect the beacon-light with the main pier, and is wanted for the next season.

And the following is the estimated cost of the eastern pier, on plan submitted to the department by Colonel Totten last year, and for the construction of which an appropriation is wanted for the next year, to wit:

Wharf stone, 400 cords, at \$3 50.....	\$1,400 00
Flat and square timber, 14,000 feet, at 5 cents.....	700 00
3,000 feet ties, at 2 cents.....	60 00
9,000 feet plank, at \$10 per M.....	90 00
Blacksmith's bill.....	250 00
Two crane scows.....	525 00
Four tons of iron, at \$120 per ton.....	480 00
Labor and subsistence of hands, &c.....	2,750 00
For the eastern pier.....	<u>6,255 00</u>

Estimate and expense of constructing breakwater according to plan No. 2, of last year, submitted by Colonel Totten, to wit:

It is to be 22 feet high, 28 feet wide, and 200 feet long, and will require of square and flat timber 19,330 feet, at 5 cents per foot.....	\$966 50
Round ties, 4,000 feet, at 2 cents per foot.....	80 00
Wharf stone, 385 cords, at \$4.....	1,540 00
Labor and subsistence of hands.....	2,975 00
3 tons of iron, at \$120 per ton.....	360 00
600 pounds of spikes, at 12 cents per pound.....	72 00
5,600 feet of plank, (3-inch).....	84 00
Blacksmith's bill, estimated.....	225 00
1,440 feet of white-oak post, at 6 cents per foot.....	86 00
	<u>6,388 50</u>

Necessary appropriation for the breakwater for the year of our Lord 1835; and this amount is supposed to be sufficient for the completion of the above work, &c.

And I would here remark that the rapid increase of business at this place, and particularly the continued extension of the great iron-works in the immediate neighborhood of this place, call loudly for an extension of the public pier. It is confidently believed that an extension of these works, according to plan No. 2, submitted to the department last year by Colonel Totten, as well as yourself, will afford ample accommodation for vessels and boats at all times, and perfectly secure from storm or danger. The average depth of water, on each side of the present pier, for the distance of 400 feet is, this season, 16 feet, and no bar to obstruct.

I am also satisfied that the foregoing estimates are sufficient to construct the works alluded to, and also to finish the present; and I will here remark that, unless the present works are finished or secured, they cannot remain long in their present condition, and it would be at the imminent danger of their total destruction to suffer them to pass the next season without further appropriation.

I am, sir, with great respect, yours,

R. HARPER, *Superintendent of Public Works at Cunningham creek, Ohio.*

E.

DUNKIRK, *New York, October 2, 1834.*

SIR: In conformity with your instructions, I now have the pleasure of transmitting herewith to you my abstracts and vouchers for the first, second, and third quarters of the year 1834; estimates for funds required for the service of the year 1835; and an estimate of the probable expenses of the fourth quarter of 1834; the annual and monthly reports of the progress, state, and condition of the works at this place; and, in conclusion, a general report, with the necessary remarks, &c.

I am, very respectfully, your obedient servant,

THOMAS FOSTER, JR., *Superintendent.*

JOSEPH D. SELDEN, Esq., *U. S. Agent for the Improvement of Harbors on Lake Erie, Pa.*

REPORT.

A.—An estimate of funds required for the service of the year 1835 for filling up with stone and putting in complete order 352 yards of the outer pier or breakwater.—(See estimate, remarks, &c.)

After making the necessary and thorough survey of this work, I find that the stone has settled in 352 yards of it to average about three feet through the whole length; and to put it in a thorough state of repair this estimate is submitted. If the work be filled up and repaired next season it will last for a number of years, and if suffered to remain in its present condition it will not last more than one or two years. In consequence of the vacancy made by the settling of the stone, the ice and water have a chance (and do) of rushing and passing through the whole length of the work; consequently, more or less of the planking will be knocked off at every storm and rise of water we have, (more particularly when the ice is making in the fall,) and, in this event, great quantities of the stone will be thrown out. In conclusion, if filled up, the ice and water could not have the same chance of operating on it.

The timber above water is fast decaying.

B.—An estimate of funds for extending and completing the pier or breakwater in front of the harbor.

In reference to this estimate, it is only a renewal of the application made for funds for the service of the present year, (1834,) and submitted to you last October, and by you to the department.

C.—An estimate for funds for extending and completing the pier running from the main land towards the channel at the western entrance into the bay.

An estimate for the same object was submitted to you on the 1st of October last, (1833;) the amount, however, is a little larger. In making out this one I find some items had been estimated too low in the former. In regard to the application for funds for this pier or work, I consider of far the greatest importance the original design of this work, which was to break off the very heavy swell coming into the bay from southwest, west, and northwest, and giving protection to the wharves and warehouses and vessels at anchor in the bay. The present pier is just carried far enough from the shore to throw the whole weight of the ice and water coming down with the westerly winds directly into the bay and against the wharves, and, if continued to its designed length, it would afford the desired protection, and the ice and swell would pass by and strike the breakwater about midway, and pass off without any injury. I would more particularly refer you to Colonel Totten's report on this subject, which will be found in the documents accompanying the President's message to the last Congress, pages 91 and 92. Allow me, sir, in this place to suggest to you the propriety of presenting to the department the necessity and importance of the contemplated improvements, and endeavor to have them passed at the coming Congress. You are no doubt aware that by partial and late appropriations but little is gained or saved to the government. The whole of these works can be completed with the amounts estimated for in two years, if early appropriations are made—one-half, if requested, to be expended the coming season, and the residue the following. At the long sessions of Congress appropriations are made at so late a period that the best part of the working season is passed away; for instance, the present season.

F.—An estimate of the probable expenses of the fourth quarter of 1834.

The western and main channel into this harbor has, at the very lowest stage of the water in the lake, never less than nine feet in the shoalest place, and this but a short distance, say about 100 feet, and this is inside of both piers, and between those piers in the channel there is 10, 11, 12, 15, and 18 feet water. The eastern channel is very crooked and narrow; it is only used by vessels coming in and going out in calm and southerly weather; there is about 10 feet in the shoalest part of the bar; the anchorage inside of the piers is from 15 to 18 feet and clay bottom. The channels into the bay are not subject to any alteration by the shifting of winds or drifting sands; the bottoms are of smooth rock; the only alteration is by the rise and fall of the lake.

A.

Estimate of funds required for the service of the year 1835, for filling up with stone 352 yards of the outer pier or breakwater, and for removing and replacing plank, &c., viz:

360 wharf stone, delivered in the works, at \$2 75 per cord.....	\$990 00
3, 000 feet 3-inch plank, hemlock, at \$13 per M.....	39 00
110 red beech ties, 18 feet long, 12 inches diameter at small end, 1,980 feet, 1½ cent per foot.....	29 20
200 pounds 7-inch spikes, for spiking in plank, 200, at 10 cents.....	20 00
500 pounds bolt iron, for bolts and other objects, (worked,) 500, at 10 cents.....	50 00
800 feet white oak timber, for caps and posts, 800 feet, at 10 cents per foot.....	80 00
10 days' service of one carpenter, at \$1 50.....	15 00
10 days' service of ten laborers, 100, at 74 cents.....	74 00
	7 50
Add 10 per cent. for contingencies, \$1, 135 70.....	113 57
	1, 418 27

B.

Estimate of funds required for the service of the year 1835, for extending and completing the pier or break-water in front of the harbor of Dunkirk, New York, viz: 20 cribs, 32 feet each, to be sunk in 8 feet water and carried up 5 feet above the surface, 22 feet wide at bottom and 18 feet at top, making 216 yards.

60 sycamore sills, each 35 feet long, square, 14 by 15 inches, making 2,100 feet, at 6 cents a foot.....	\$126 00
160 hardwood side sticks, 34 feet, hewn on two sides to 12 inches, 5,440 feet, at 5 cents.....	272 00
160 hardwood side sticks, 34 feet, hewn on two sides to 12 inches, 5,440 feet, at 3 cents.....	163 20
100 yellow poplar sticks, 34 feet, square and bevelled, 12 by 16, 3,400 feet, at 6 cents.....	204 00
100 yellow poplar sticks, 34 feet, square, 12 by 12, 3,400 feet, at 6 cents.....	204 00
120 white oak posts, 13 feet, square, 14 by 14, 1,560 feet, at 10 cents.....	156 00
60 white oak caps, 22 feet, square, 14 by 14, 1,320 feet, at 10 cents.....	132 00
3,000 white oak treenails, 2½ by 2¾ inches, 3,000 feet, at 1½ cent.....	45 00
600 hardwood ties, 20 feet 10 inches in diameter at small end, 12,000 feet, at 1 cent.....	120 00
460 red beech ties, 18 feet 10 inches in diameter at small end, 8,280 feet, at 1½ cent.....	124 20
1,140 cords wharf stone, delivered in the works, 1,140 cords, at \$2 75.....	3,135 00
11,520 feet 3-inch hemlock plank, 11,520 feet, at \$13 per M.....	149 76
1,330 pounds 7-inch spikes, for spiking in plank, at 10 cents.....	133 00
1,200 pounds bolts, of various sizes, and for various purposes, 1,200 pounds, at 10 cents.....	120 00
1 superintendent, superintending construction of works generally, 8 months, at \$60 per month.....	480 00
1 chief carpenter, superintending carpentry, 8 months, at \$60 per month.....	480 00
2 assistant carpenters, 8 months each, 16 months, at \$52.....	416 00
14 laborers, 8 months, 112 months, at \$20.....	2,240 00
Add 10 per cent. for contingencies, \$8,700 16.....	870 00
Total amount required.....	9,570 16

C.

Estimate of funds required for the service of the year 1835 for extending and completing the pier running from the mainland towards the channel at the western entrance into the harbor at Dunkirk, New York, viz: 15 cribs, of 34 feet each, to be sunk in 10 feet water and carried up 5 feet above the surface, 22 feet wide at bottom and 18 feet at top, making 510 feet or 170 yards.

45 sycamore sills, each 34 feet long, squared 14 by 18 inches, 1,475 feet, at 6 cents per foot.....	\$88 50
150 hardwood side sticks, 34 feet long, 18 inches diameter, and flatted on two sides to 12 inches, 5,100 feet, at 5 cents.....	255 00
150 hardwood side sticks, 34 feet, 14 inches in diameter, and flatted on the two sides to 12 inches, 5,100 feet, at 3½ cents.....	178 50
75 yellow poplar side sticks, 34 feet, squared and bevelled, 12 by 16, flatted on two sides to 12 inches, 2,550 feet, at 6 cents.....	153 00
75 yellow poplar side sticks, 34 feet, square, 12 by 12, flatted on two sides to 12 inches, 2,550 feet, at 6 cents.....	153 00
90 white oak posts, 18 feet, square, 14 by 14, flatted on two sides to 12 inches, 1,620 feet, at 10 cents.....	162 00
45 white oak caps, 22 feet, square, 14 by 14, flatted on two sides to 12 inches, 990 feet, at 10 cents.....	99 00
500 hardwood ties, 22 feet, 10 inches diameter at small end, 11,000 feet, at 1 cent.....	110 00
450 red beech ties, 18 feet, 10 inches diameter at small end, 8,100 feet, at 1½ cent.....	121 50
3,000 white oak treenails, 2½ by 2¾ inches diameter, 3,000 feet, at 1½ cent.....	45 00
1,100 cords wharf stone, delivered at the works, 1,100 cords, at \$2 75.....	3,025 00
10,200 feet 3-inch hemlock plank, 10,200 feet, at \$13 per M.....	132 60
1,020 pounds 7-inch spikes, for spiking on plank, 1,020 pounds, at 10 cents.....	102 00
900 pounds bolts for various purposes, 900 pounds, at 10 cents.....	90 00
1 superintendent, superintending construction of works generally, 8 months, at \$60 per month.....	480 00
1 chief carpenter, superintending carpentry at works generally, 8 months, at \$60 per month.....	480 00
2 assistant carpenters, 8 months each, 16 months, at \$26 per month.....	416 00
12 laborers, 8 months, 96 months, at \$20.....	1,920 00
Add 10 per cent. for contingencies, \$4,715.....	471 00
Total amount required.....	8,482 61

E.

OCTOBER 10, 1834.

Sir: I have the honor to transmit the annual report of the condition of the United States works at the mouth of Genesee river, and at the entrance of Big Sodus bay, on Lake Ontario, State of New York, on September 30, 1834.

1. Of what has been done in the year.
2. Of what remains to be done to complete the plan, the lights, &c.
3. Of what is to be done to make the work permanent.
4. Remarks on the stability of upright piers, and conclusion.

1. What has been done at

Genesee river.—Twenty thousand dollars were appropriated for these works in the year 1834. The accounts of expenditure to September 30, 1834, are rendered to the War Department. Twenty-six cribs of thirty by twenty feet have been constructed and sunk this year at Genesee river, in from twelve to fifteen feet of water, and the work raised out of water, and will, before the close of the season, together with eight other cribs, one forty feet, another thirty feet square, be carried up and levelled at the usual point, five feet above the surface of the water, with timber, iron bolts, and stone, giving an extent of 2,876 feet on either side of the river, making a total of 5,752 feet of pier. This work has opened a crooked passage over sand bars, having seven feet of water upon them, to a free and straight line navigation of fifteen feet depth of water into Rochester harbor, where there are from eighteen to twenty feet of water; the work thus constructed is firm, and answers all the purposes expected from it. Should the mobility of the sand threaten at a future day to impede the present open channel that has continued open now three years, one month's work with the dredging machine that is contemplated to be used at Sodus bay would entirely free the channel from any such sandy obstruction. A beacon-light would have been placed this year on these piers, but the appropriations were late, and it was found that a permanent light could not be constructed upon a temporary foundation not yet fully settled in the sandy bottom for the sum appropriated; its construction was therefore deferred until the ensuing year.

Big Sodus bay.—Fifteen thousand dollars were appropriated for the work of 1834 at this bay. The accounts of expenditure to September 30, 1834, are rendered to the War Department. At this bay there have been constructed 5,378 feet in length of pier, distributed on both sides of its entrance, to which have been added this year twenty-four cribs, fourteen at the T piers, sunk in from eleven to thirteen feet of water, and ten cribs deposited at the isthmus to prevent the waves of the lake from breaking through into the bay. The cribs at the T are of the usual dimension of thirty by eighteen feet, and will, with three others, one of forty feet square and another of thirty, be elevated to the usual height and finished five feet above the surface of the water. The depth of the water at the entrance of the T's is now thirteen feet, but decreasing inward to nine feet depth, for the action of the current here is upon "hard pan," and not, as at Genesee river, upon sand, rendering it, therefore, necessary to break up this pan by a steam plough to open the channel to a proper depth hereafter described. From the above-mentioned depth of nine feet the water deepens inward to more than thirty feet, over a space of several square miles, forming Sodus bay. The pier work at the close of the year will form an extent of 5,900 feet in length at the entrance of the bay, exclusive of the 300 feet thus far deposited at the isthmus, which, from present appearances, promises to effect the desired object. It is, however, an experiment that may require additional cribs; the weather of November and December will probably decide the question. The plans accompanying this report give the form, position, and extent of these works at Genesee river and Sodus bay.

2. What remains to be done to complete the original plan, the beacon-lights, &c.

At Genesee river, after the close of the year 1834, it will be necessary to make the outside pier, now forty feet square, permanent, to fit it for the reception of the beacon-light; to do which it will be necessary to face it above water with stone laid in hydraulic cement. Such a structure will also be a commencement of the system of perpetuating the existing work, as recommended by Colonel Totten, for which an estimate is enclosed, and marked A; and, also, an estimate marked B, to build the beacon-light on a permanent plan, for which \$2,000 were appropriated by Congress at the last session, but which sum is not equal to that object, standing, as the light must, extended into the lake; and exposed in the winter to heavy drifts of ice. A plan of such a light is herewith sent, marked C. The curved slope of the face of this building is, as you well know, intended to lead the sliding masses of ice, driven by the wind up the face, until it falls back by its position and gravity. The necessity for the thickness of the walls is apparent, from the circumstance that floats of ice to the thickness of fifteen feet have been driven upon the piers by the waves of the lake; of course the structure should be so planned and built as to turn off such masses of ice.

At Sodus bay.—The continuance of the work on the original plan is to secure a channel way entrance of fourteen feet of water. The pier work will be finished this season, so far as to render it necessary to apply the steam plough and dredging machine for the purpose of breaking up and removing the hard pan, so as to obtain a free navigation for fourteen feet depth of water. This hard pan having been frequently penetrated with piles, in the course of my work, can therefore be broken up and removed by the machinery heretofore and now recommended. For the construction of a suitable engine, and for operating with it for two years, the time necessary, in my opinion, to effect this object, I herewith transmit estimates that are marked D.

The forty feet square pier at the outer extremity of the Sodus piers will also require, as at Genesee, to be built permanently, as per estimate marked A, and a beacon-light to be erected thereon, of form and structure, to guard against the ice, as detailed for Genesee.—(See the plan marked C, and its estimate marked B.)

3. What is necessary to be done to make permanent both the works at Genesee and Big Sodus Bay?

Colonel Totten, the inspecting engineer, recommended that, as the timber of these works must decay, masonry in hydraulic cement should be substituted for timber above the surface of the water. Reference to the report on that subject makes it unnecessary to repeat here his remarks.

The works thus far constructed are proofs that useful harbors have been formed by them; means, therefore, to secure the existing work, and to render the same permanent, have been deemed necessary. Estimates of the sum required have been carefully made, upon inquiries repeated this year, similar to those made last year, to determine the expense of constructing the necessary walls upon the pier work, to be laid in hydraulic cement on the exterior courses of masonry; and those inquiries corroborate the propriety of the estimates of last year; they are enclosed and marked E and F.

4. Of the stability of upright piers.

The stability of the piers at Genesee river depends on their bulk and weight, and their subsidence into the sand at the bed of the lake, where, conformably to the different degrees of firmness and tenacity of that bed, they have in five years settled from one to five feet, and will, in my opinion, settle no more, and have thus become secure, and, to the surface of the water, will endure for many years.

The piers at Sodus bay, of similar form and structure, stand generally on hard pan, have maintained a general level for five years; and there is, in my opinion, no danger of their being upset. Before the construction of harbors, by the aid of square-sided piers, the common belief was that upright surfaces were not as safe, and could not resist the surge of waves with effect equal to that of sloping surfaces.

Many judicious remarks from Colonel Totten have induced me to give more attention to this subject than I otherwise might have done. He has, I believe, given the whole subject of the motion of wave much thought for several years past. In the course of my work at Genesee and Sodus, I have remarked that the surge of the lake appeared to expend a great part of its force before it reached the vertical face of the pier, although approaching the pier with much apparent velocity. The undulation of water by the force of wind diminishes below the surface in proportion to the depth of water; the power and velocity of the surface wave depend on the duration and force of the wind; the water below the surface wave, so much less as, by my observation, to be resisted by the vertical face of the pier without shock. In the reflex motion of this under mass of water, it meets and receives the principal part of the force of the coming surface wave, and thus prevents it from expending its force upon the face of the pier; whereas a sloping pier leads the roll of the surge, and receives the shock of the wave. It is my opinion that, in depths of water not exceeding four fathoms, it would be easily practicable to construct vertical sided piers, and also that they would form the most durable and the least expensive resistance to the waves of the sea.

The construction of these lake harbors has increased navigation from a few shallops to hundreds of vessels that convey produce and manufactures in numerous directions. The harbor at Genesee created a railroad from Rochester, the commerce of which city involves at least half a million of dollars, and whose mills send forth two hundred thousand barrels of flour per annum.

The harbor of Sodus, when completed, would afford safe anchorage to five hundred sail of vessels to ride at one time in any gale, as may be seen by consulting the sketch herewith sent.

The direct line of communication through the rich country that lies between Chesapeake bay and this harbor at Sodus has already elicited the attention of Pennsylvania.

Few stronger bonds of union, that depend on agricultural and commercial interests, could be created than would result from a steamboat navigation to unite the Chesapeake by the river Susquehanna and Seneca lake with Sodus bay at Lake Ontario. In reference to defence, it would be the best of military lines of operation, for the magazines would be the productive fields and arms on its covered flanks and rear.

Respectfully submitted.

J. G. SWIFT.

Gen. CHARLES GRATIOT, *United States Chief Engineer.*

A.

Estimate of the expense of finishing the United States work at the mouth of Genesee river, Lake Ontario, to render permanent the forty feet square pier in hydraulic masonry.

30 cords of best stone, at \$7.....	\$210
Rough hammering the two surfaces, 5,000 superficial feet, at 12½ cents.....	630
750 copper bolts, at 50 cents.....	375
15 barrels of lime, and 6 of cement.....	63
40 cords of filling stones, at \$3.....	120
Workmanship.....	660
Contingencies and superintendence.....	332
	<hr/>
	2,390
A. The same for Big Sodus bay.....	2,390
	<hr/>
	4,780

[C.—Map accompanying the original.]

D.

Estimate of the expense of constructing and working a steam engine and iron plough and dredging machine and other implements, to excavate the hard pan in the channel between the T's of the piers at Big Sodus bay, New York.

One twenty-horse power steam engine.....	\$3, 000
Copper boiler, gratings, and extra shafts.....	1, 400
Chain pump, gearing, and dredging shaft.....	1, 200
Vessel for the same, and wheels.....	1, 700
Iron plough.....	300
Wrought iron carriage, wheels, and scow.....	300
Four chain cables.....	400
Iron dippers, rakes, crane, and chains.....	475
Two gondolas and cranes.....	225
Four anchors.....	400
One steam engineer, and also eight men.....	1, 500
Fuel, repairs, and contingencies.....	3, 100
For the year 1835.....	14, 000
The same machinery, &c., &c., used in 1836, or second year's work.....	6, 000

OCTOBER 10, 1834.

J. G. SWIFT.

F and E.

Estimate of the expense of rendering permanent the present pier work at Big Sodus bay, by substituting stone masonry for the timber work four feet above water, conformably to the plan in the annual report of last year.

1, 000 cords of building stone, in lengths not less than to square 4 feet, at \$7.....	\$7, 000
3, 000 cords of fragment stone, at \$3.....	9, 000
800 cords stone, squaring 2 feet, at \$5.....	4, 000
20, 000 pounds copper bolts, at 25 cents.....	5, 000
Workmanship, including lime and cement, to wit, 6, 300 perches masonry, at \$1.....	6, 300
14, 000 feet dry wall work, at 25 cents.....	3, 500
Blacksmith's work.....	760
Repairs and contingencies, and superintendence.....	2, 940
	38, 500

E.—Genesee river, same work: deduct \$4, 000 for the greater facility in procuring stone upon that river; therefore, the expense of similar work on Genesee river would be..... 34, 500

This work at both harbors might be accomplished in two or three years, as might best suit the wants of the public service to appropriate means in either of those propositions.

J. G. SWIFT.

OCTOBER 10, 1834.

F.

FORT MACON, October 1, 1834.

SIR: I have the honor to report that the operations for improving the navigation at Ocracoke inlet by means of dredging machines have been continued since the 30th September last, with a suspension of the same during the interval contained between the 14th November and 15th April last, rendered necessary by the state of the weather during that period, which was chiefly occupied in repairing and refitting the vessels for the present season.

The two boats which had been used during the last year were put in readiness, one of which, although nearly worn out, was so repaired as to be made serviceable throughout the greater part of the summer, but was discontinued on the 1st September, being rendered inapplicable from the decay of the machinery. The operations, with the aid of a regular and efficient organization, have progressed without interruption since the above date, and the machinery unremittingly and perseveringly applied upon the obstructions, without other impediment than that occasioned by rough weather, and the quantity of earth excavated since the date of last report has amounted to 35,300 cubic yards, the greater part of which has been transported to the distance of about three-quarters of a mile. It was in contemplation at the close of last season to aid the operations with a steam towboat for towing away the lighters when loaded, the expense of procuring which was embraced in the estimate for the current year, but the funds for its purchase becoming available at so late a date, rendered it impracticable to procure it in time to be applied during the present season, and the work for which it was intended has in lieu been performed by an additional

force of laborers. Although the earth was required to be transported further this season than that excavated during the last, it was found that it could more conveniently be done by laborers than was at first anticipated, whence no disadvantage has resulted excepting, perhaps, in the cost, which may be less by the former method, leaving out of consideration the first cost of the steamboat. The boats have been principally occupied in cutting a channel through that part of the obstructions called the 8-foot shoal, and in widening and further improving the flounder slue. A cut has been made through the former, in length 950 yards, from 9 feet on each side, and about 33 yards wide, and from $9\frac{1}{2}$ to 11 feet deep, rendering this part of the channel practicable for 9 feet to the entrance of the flounder slue, the latter having a depth of a few inches over 8 feet, but, from its narrowness, great care is necessary to prevent vessels from grounding on either side whilst effecting the passage.

The result of the operations to the present time has been to render this channel, which was not formerly practicable, the best at the inlet, both as regards the draught of water which can be carried through and the shelter afforded against storms; also, a thoroughfare for the whole commerce of the middle counties of North Carolina on the seaboard, which, by a registry regularly kept, makes the number of passages within the twelve months past to be upwards of four hundred, with a draught of water varying from $7\frac{1}{2}$ to $7\frac{3}{4}$ feet, showing an increased depth to which vessels now load of nearly 1 foot, and estimated to save in lighterage about 200 barrels, and the detention corresponding, to which may be added the advantage of a safer outlet than before existed. Thus it appears that although the operations have been but partially successful, they have nevertheless been productive of a decided and useful improvement in the navigation. There are circumstances, however, arising out of the peculiar nature of the locality which, according to the experience of the last season, are such as to create strong doubts of the practicability of improving this navigation to that extent desired by those interested in its improvement, the principal object having been to obtain a draught of 10 feet water at high tide. The causes here alluded to are the uncertain and shifting character of the shoals lying near the inlet. On an examination of the general map of the navigation at Ocracoke, it will appear that the inlet is enclosed on the side of the sound by the extensive royal shoal, which is penetrated by four channels, to wit: Teache's hole and Blair's to the northeast, and the old ship-channel and Wallace's channel to the southwest. In each of these are found shifting sand shoals, presenting obstructions to the passage of vessels, the depth of water on them being from 6 to 8 feet. Of this nature is the mouth of Teache's hole, the junction of Blair's channel with the sound, the Bulkhead in the old ship, and the mouth of Wallace's channel. The mouth of Teache's hole, which, according to a survey made upwards of thirty-five years since, was practicable for 6 feet water only, has within late years improved so as to admit the passage of vessels drawing 7 feet, but is subject to sudden and frequent changes. The passage of this bar is dangerous in the extreme; the ocean swell, when of any magnitude, breaks heavily upon it, and greatly endangers the safety of vessels which may have grounded upon it in their passage out. This channel, like the others, has a bar or swash on the side of the sound. Blair's channel, which has its general direction about south, and debouches into Beacon Island roads, has at its entrance from the sound a bar about 1,000 yards wide between the depths of 9 feet on each side, and upon the highest part is found 6 feet water. The formation of this bar has been attentively examined, and the sand composing it found to be loose, clean, and obviously shifting in its nature. It is exposed to the full scope of the northerly winds from northwest to northeast, which have the whole range of Pamlico sound, without any interposing barrier to their action upon this part of the navigation. The former, of well known violence when prevalent, passes in a longitudinal direction along the royal shoal and across the mouth of this channel, at which lies the bar. It is thus, in addition to its unfavorable formation, more exposed to disturbing causes on the side of the sound than either of the others. With reference to the old ship-channel, the shoal in it called the Bulkhead, situated at the point where the current of Blair's meets that descending, it is of a character precisely similar to the others, and even more variable than those, from the cross currents and eddies which are always met with at this point. With regard to the shoals described above, there are facts connected with the fate of vessels wrecked and lost upon them which illustrate in a forcible manner the nature of these impediments to the navigation. The number of vessels lost and abandoned on them has been great, and yet not a vestige thereof is found to remain, or for a distance below the bottom in which they were originally, the wrecks having in every instance sunk and disappeared in the sand. It must be obvious that neither of these channels is susceptible of permanent improvement by dredging machinery. There remains, after these, the southern or Wallace's channel. In the selection of this for the application of the machinery two objects were held in view, the principal of which was the permanency of the excavations to be made, and, secondly, the proving of a sheltered anchorage for coasters. The most favorable prospect of attaining these ends was presented in the channel last referred to, which on the commencement of the operations was thoroughly examined throughout its whole extent to its mouth, lying four and a half miles from the swash, and near the jaws of the inlet. As the formation at this point is unfavorable to improvement by dredging machinery, it was necessary to succeed that there should be found at all times a sufficient depth of water thereon to permit the passage of vessels. It was, therefore, closely examined, and found to have 11 feet water at flood, which, being 1 foot more than required, no difficulty on this head was anticipated. There remained, therefore, only the muddy and apparently cohesive formation of the swash and flounder slue to overcome in the accomplishment of the desired object, the prospect of its permanency being favorable from the fact stated above, which also rendered it apparent that those shoals could not be subject to sudden and irregular changes, and that, in the event of a channel being opened, it could be injuriously affected only by the gradual deposit of alluvion, held in suspension by the descending currents, which might be successfully counteracted by machinery. This conclusion was fully confirmed by the result, the obstructions in question having been made navigable for 8 feet draught, showing a gain on the flounder slue of 3 feet; whence it would appear that if the practicability of opening a channel of 10 feet depended solely upon these obstructions, which alone were had in view in the original project, and the act applicable to the execution of the work, there would remain but little doubt that the requisite depth could in time be acquired and maintained by the use of machinery. Notwithstanding, after the latter had been in operation upwards of twelve months, it was found that the mouth of Wallace's channel was undergoing a change and shoaling, an event which was not anticipated. In consequence of this result, attention was drawn to a channel about one mile above the mouth referred to, connecting Wallace's channel with Beacon Island roads, and understood to be of recent formation. This channel, called Beacon Island slue, had at its junction with Wallace's channel a shoal or bulkhead about 350 yards wide, from 10 feet on each side, the shoalest part being 6 feet deep at flood and $4\frac{1}{2}$ feet at ebb tide, the bottom being, however, of an unfavorable character, and similar to those hitherto described in the preceding part of this report, at the

same time, if removed, it would present a nearer passage by one mile to Beacon Island roads than the main channel, and afford useful data as an experiment. To accomplish the above object, suggested by the changes going on at the outlet of the general channel, a boat was placed on the shoal referred to, and in the space of six weeks about 7,500 cubic yards were removed therefrom, and a narrow channel cut through nine feet deep at high water.

The sand, being loose, was excavated with great ease and rapidity. On resuming the operations in the spring of last year, the work done, as stated above, was found to have entirely disappeared, and the bar of Beacon Island slough had resumed its former state of shoalness—an evidence conclusive of the inutility of dredging in bottoms of that nature. At the same time that this effect was observed, the mouth of Wallace's channel was found to have shifted its position and deepened to upwards of ten feet at high water; and as the impracticability of permanently deepening or otherwise improving the shoals lying near the entrance by dredging was manifest from the experiment hitherto described, and the outlet being found thus favorable, the operations were then vigorously pressed forward on the swash and flounder slough, with the expectation that the greater volume of water which would thus be induced to pass out thereat, and through the general channel, might tend to maintain the requisite depth at the mouth. It was then that the greatest improvement was effected on the flounder slough, and the current through the same increased from 22 to 32 inches per second, which facts were embraced in the report of last year. This channel was also open to the coasting trade, and has ever since been used as the regular thoroughfare for the commerce. An exception to the above may be stated in regard to the vessels from the north counties, which, although generally of a lighter draught than those heretofore referred to, are few of them in the habit of using this channel; whence it is inferred that the want of a sufficient knowledge of the superior advantages of this route has induced them to prefer the danger of Teache's Hole to sailing around the Royal shoal, twelve miles further, to the swash roads. It has not unfrequently occurred during the past season that very many of these vessels have been lying detained in that channel during the constant passage of vessels out to sea through that of the flounder slough.

The foregoing was the state of the operations at the date of the last annual report, in which, as also in my letter of the 30th November following, it will be recollected special reference was made to the outlet of Wallace's channel, and the necessity of being content with the depth of water that might be found thereon. During the present season, however, this month has again shown a tendency to shoal, but affords at high water $8\frac{1}{2}$ feet, the tide rising at this point $3\frac{1}{2}$ feet; there is at low water 5 feet; it is therefore at present necessary for vessels drawing 8 feet to wait the rise of the tide in order to effect the passage, although vessels of that draught now pass with very little detention. It does not, therefore, appear that this outlet in its natural state can be relied upon at all times for a depth of 10 feet, whence the inferences are drawn which have been already adverted to in the foregoing part of this report. The history of this navigation shows that great changes have taken place within the present century, not only in the shoals and channels, but in the extent and form of the projecting points bounding the inlet. That these changes are in constant progress admits of not a doubt. Hence, whatever depth may be obtained by the present process, it can hardly be relied on as possessing permanency so long as the gradual operations of nature remain the same. An examination of the map of this navigation shows that nearly all the channels at the inlet converge to the general channel or common entrance at the inlet; and the meeting and interference of these currents naturally cause the formation of shoals of greater or less magnitude, which must be coexistent with the channels themselves as the causes producing them. To reduce the number of these to one which should discharge the surplus water received into Panlico sound by artificial means, has long been looked upon as visionary and impracticable so long as there exists the immense inner basin of the sound, which may be considered the common estuary of the various rivers whose waters meet those of the sea through Ocracoke inlet, and, from its dimensions, affording ample room for the formation of any series of shoals and channels on the inner side which an artificial alteration of the inlet might occasion.

During the past season great interest has been manifested by those concerned in the commerce of the north counties on the subject of Blair's channel, and a desire expressed for the application of the machinery upon the bar at its mouth. Although this, if navigable, would afford a more direct passage for the trade from those counties, and is uninterrupted by the shoals near the inlet, yet from the facts already reported with regard to this channel, it is quite evident that its permanent improvement by dredging machinery is uncertain, if not impracticable.

The operations during the months of October and November of the present year will consist in widening and deepening the flounder slough, the narrowness of which at present offers the principal impediment to the passage of vessels drawing 8 feet water. The department is referred, in illustration, to the general map of Ocracoke inlet forwarded with my report of last year, and to a special chart of the channel improved, which is now in preparation and will shortly be forwarded.

The funds available at the close of this year will be greater than anticipated, and are explained in the first part of this report, the contemplated purchase of an additional steam vessel not having been made.

The following statement exhibits the amount of funds available for the fourth quarter of 1833 and the year 1834, with the disposition of the balance remaining unexpended on September 30, 1834:

Balance in the hands of the agent on September 30, 1833.....	\$608 19
In the treasury at the same date.....	11, 400 00
Appropriation for the year 1834.....	15, 000 00
Refunded during the year.....	98 99

Making the amount available for the fourth quarter of 1833 and the year 1834.....	27, 107 18
The expenditures during the year ending on September 30, 1834, were.....	13, 699 30
<hr/>	
Leaving a balance unexpended on September 30, 1834, of.....	13, 407 88
Of the latter sum there was in the treasury undrawn on September 30, 1834.....	10, 600 00
<hr/>	
And in the hands of the agent.....	2, 807 88
The expenditures during the fourth quarter of 1834 are estimated at.....	3, 407 88
Which will require to be drawn from the treasury to complete the service of the year 1834....	600 00
Leaving a balance which will not be required at any time this year, and which may be applied to the service of the year 1835, of.....	10, 000 00
<hr/>	

Respectfully submitted.

G.

SMITHVILLE, N. C., October 23, 1834.

SIR: The annual statement of expenditures made on account of the improvement of the navigation of Cape Fear river, below the town of Wilmington, is forwarded herewith, and exhibits the cost of those improvements to September 30:

The balance which remained in the hands of the agent on September 1, 1833, was.....	\$1,687 65½
The balance of appropriations in the treasury on that day was.....	21,781 00
And the appropriation for the year 1834 was.....	5,234 00
<hr/>	
Which made the sum of... ..	28,702 65½
available for the fourth quarter of 1833 and the year 1834.	
The balance in the treasury on September 30, 1834, was.....	\$13,864 00
From which is to be deducted the balance due the agent on September 30, 1834..	5,694 52½
	<hr/>
	8,169 47½
<hr/>	
Showing the expenditure for the year ending September 30, 1834, to be.....	20,533 18
<hr/>	
The whole amount of appropriations equal.....	182,627 00
And the expenditures to September 30, 1834, per annual statement.....	124,705 24
<hr/>	
Which leaves of the several sums appropriated.....	7,921 76
To which add this amount, being for articles sold, &c.....	247 71½
<hr/>	
Making available for fourth quarter of 1834 and the year 1835.....	8,169 47½
<hr/>	

My last report stated the difficulties which we had to encounter in constructing the jetties for the middle shoal, near Old Town, on the western side of the river, and Barnhard's creek, on the eastern side, in consequence of the washing up of the plank of which they are built. This has been obviated, in some degree, at the jetty near Old Town, by throwing stone on each side of it as far as the quantity of that material which we could procure here would enable us to secure it. One thousand six hundred and eighty-five and one-half tons have been deposited around this jetty; and on those parts of it where the stone has been thrown it has not only resisted the action of the current and preserved the jetty, but it also secured it against the effects of the storm which occurred here on the 4th and 5th of September last. Those parts of the jetty which were not protected were much injured, as were all the jetties on the river, excepting the two on the western side, near the Bulkhead or upper shoal. As a substitute for stone, I shall collect all the oyster shells which the rocks on the Oak Island purchase will supply, and deposit them on those parts of the jetty where there is no stone.

The dredging-machine has been at work on the middle shoal and on the Bulkhead during the season. Over these shoals 10 feet only could be carried when the improvements on the river were first placed under my superintendence, and over the lower shoal, on which we have not done anything, 10 feet could go; this was the greatest draught which could be carried to Wilmington at that time. Now vessels are constantly going drawing 11½ feet over the lower shoal, which must have been benefited in some degree by the jetties near to Old Town and Barnhard's creek; and over the middle and Bulkhead shoal 12 feet can be carried; 11½* feet can be carried to and from Wilmington, which shows that the river has been improved.

The total destruction of all the jetties near the Bulkhead shoal by a storm in August, 1830, and the continual repairs which have been made to those since built near the middle shoal, have caused a large sum to be expended, which would otherwise have been applied to the erection of the jetties for the lower shoal, and the closing of the western channel at Campbell's or Big island. It is in consequence of these casualties that greater success has not resulted from our labors; they could neither be foreseen nor guarded against—were not under human control—and human wisdom, however profound, could not have exercised its power to arrest them.

The experiment which has been made by placing stone around the jetty at Old Town has been so successful that I cannot but hope the government will authorize another appropriation to be made for the purpose of constructing the jetties at Old Town, Barnhard's creek, and Big island of durable materials, that they may be permanent structures. An estimate will be forwarded for this purpose, if you direct one to be made, as soon as the necessary information can be obtained in relation to the cost of the materials which would be used in their construction.

All of which is respectfully submitted.

GEORGE BLANEY, *Capt. Corps of Engineers and Bvt. Major.*

Gen. C. GRATIOT, *Chief Engineer.*

H.

LOUISVILLE, October 24, 1834.

SIR: Since the last inspection of the works for the improvement of the navigation of the Mississippi and Ohio, the superintendent has steadily pursued the plan of operations previously adopted on those rivers, and with the same success.

The overhanging trees were removed from the bank before the last report, the island chutes and dry sand-bars have been cleared, and the largest and most dangerous of the snags have been dragged from the channel. By these means the high-water navigation is rendered comparatively safe and easy.

* On spring tides 12 feet can be easily carried to and from Wilmington, and during a freshet the last winter, which was not over 6 inches higher than the spring tides at the jetties, 13½ feet was carried up by an English brig, which is the greatest draught ever carried to Wilmington.

Boats run with security at night where a few years since it was hazardous to attempt a passage even in daylight.

Pursuant to this system, there remain yet to be removed the snags and sunken logs which are below the surface of the water even at its lowest stage, and are the more dangerous from being unseen. A large portion of this work has been effected since the last report. During the past summer the Mississippi has been lower than at any period for years previous, affording a most favorable opportunity for accomplishing this part of the work. Unfortunately the repairs required by the snag-boats, and the impossibility of getting them out of the Ohio when ready for operation, have rendered unavailing circumstances so auspicious for removing the sunken logs and snags.

Those points which demand particular notice as presenting most difficulties from such obstructions as come under the last class of work, are Glasscock's island, Cowpens, point above Rodney, Panpan island, Point Chicot, mouth of White river, Sixty island, Horseshoe island, St. Francis island, chute of Thirty-seven island, Plumb Point, Fourteen island, Ten island, and most of the river from the mouth of the Ohio to the Missouri. Although these are designated as being unfinished, they are not the only points requiring attention before the proposed improvement can be considered complete. The importance of rendering the navigation safe and easy is increasing with the daily increase of trade. A vast amount of valuable produce and merchandise is at all times afloat on this river in steamers or flatboats. Notwithstanding the great security resulting from the improvements already effected, many accidents happen and much property is destroyed by the loss of steamers and flatboats which have been intrusted to ignorant or unskillful management. The danger is, perhaps, rather augmented than diminished by the feeling of safety inspired by what has been done.

Perseverance in the present system of improvement is alone necessary to overcome all difficulty in the navigation of the Mississippi. The practical results produced during the last four years leave it no longer a matter of doubt that the only effectual mode of preventing the recurrence of those obstacles which have obstructed and still obstruct the navigation is to cut off at once the source whence they flow. Experience during the same period has established the fact that it is the banks which are thrown into the stream by the weight of the timber, the action of the current, or the combined influence of the two, that supply the snags or sawyers so frequently occurring in situations from which all such obstructions had been removed. The removal of such trees as are likely to fall into the river becomes, therefore, a matter of the utmost importance. The hostility so strongly manifested against this part of the work at its commencement has at length yielded to the conviction of its utility; and I question if the subject were submitted at this time to the decision of those who were loudest in their denunciations against it, if it would not be decided to have been the most judicious and effectual method yet adopted of permanently benefiting the navigation. Such at least are the sentiments of the steamboat captains and pilots whom I have consulted. This plan is attended with much less expense than that of removing the trees from the channel after they have fallen in with the bank.

Admitting that it is necessary to clear the trees from the alternate bank to the extent of fifty yards for one-fourth of the distance from Natchez to the Missouri, it would amount to 5,294 acres, which, at eight dollars per acre, (about the price which it actually costs,) comes to \$42,352; the average cost of removing snags has been estimated at eight dollars, at which rate the expense of taking out the snags would greatly exceed that of clearing the banks.

The efforts of the superintendent were at an early period directed to the accomplishment of this object, towards which much has been done. The salutary effects of the plan are visible wherever it has been adopted; its advantages are strikingly exhibited for three hundred miles below the mouth of the Ohio. On this part of the river the banks, by the attrition of the water, have assumed a uniform slope, and oppose, consequently, less direct resistance to the action of the stream, and, being no longer loaded with the additional weight of the trees, have, in most instances, ceased to cave; in some places, however, the river has continued its encroachments as far as the clearing had been extended, rendering further attention in such cases necessary.

I am persuaded that the future navigation of the river depends upon the continuance of this branch of the improvement; the rapid settlement of the banks will constantly diminish the expense.

The snag-boat Archimedes, with a suitable force, will proceed with the operations on the Mississippi, commencing at the mouth of the Missouri, as soon as a rise of water in the Ohio shall enable her to get out of that river. After attentively examining the effects of clearing the banks, I am decidedly of the opinion that, if the true interests of those who navigate the Mississippi be consulted rather than the prejudices which existed amongst them at the commencement of this work, the superintendent should be instructed to resume this branch of the improvement.

The work of the improvement on the Ohio was divided into three classes:

1. The removal of all logs and trees from the bed and banks of the river.
2. The removal of all rocks from the low-water channel.
3. The construction of wing dams to concentrate the water in places where it was divided by islands or, from other causes, was spread over too much space.

The operations in the first class of these works since the last report have been confined to the removal of the snags between Troy Reach and Smithland; before it can be regarded as complete, it will be necessary to remove those which have accumulated at Hurricane island, Slim island, Henderson's Bend, Flint island, and a few at the mouth of Salt river.

Of the second class I find nothing demanding attention except a rock near the head of Wabash island, in a dangerous situation, which should be removed.

With the exception of the snags and logs taken out between Troy Reach and Smithland, above mentioned, the operations for two years have been confined exclusively to the construction of wing dams.

The navigation of the Ohio from its confluence with the Mississippi presents no difficulties until we reach Cumberland island. The Grand and Little chasms, once the terror of all who navigated this river, now offer no obstacle. The channel is deep, and the sunken rocks are all removed.

Loud complaints have been made against the dam at Cumberland island, which it was declared had entirely destroyed the navigation at low water; these expressions of dissatisfaction, so general and unmeasured, were not without an appearance of justice. It is known to the department that this work was suspended the first year of its commencement on account of the cholera amongst the laborers; the following year it was again prosecuted; an opening of eighty yards in the dam was deemed necessary for the passage of boats, the channel on the east side of the island being entirely dry. While finishing the extremities of this dam a slight rise in the water caused such a fall over the opening as to render it

dangerous to attempt to pass; the foundation was soon undermined, and this part of the dam wholly destroyed. A general rise succeeded shortly after, which, together with the cold weather, compelled the superintendent to abandon the work for the season. The late period at which the last appropriations were made, and the necessity of repairing the boats before commencing operations, have postponed all action upon the work until within the present month.

During the whole period from the commencement of the dam until this time its passage has been attended with difficulty and hazard, and a great deal of property has been lost by it. The work of filling up the break is now one-third completed, and with the present force (120 men) will be finished in two weeks. This dam promises to fulfil the objects of its construction; it was generally supposed to be injudiciously located, and that it would have possessed more strength and permanence had its course been from the head of Dog island to the head of Cumberland; but I am persuaded that such would not have been the result had it been so constructed, for in that position the direction of the current would have been parallel to that of the dam, and would have drawn it into the stream by cutting away the sand foundation upon which it is built. Such has uniformly been the tendency where the dam runs with the direction of the stream, while those which are transverse to its course have, without exception, accumulated a mass of sand and gravel above and below, which serves to support them against the influence of drift, &c.

Already a bar has formed around the Cumberland dam where finished to a level with the surface of the water; the largest portion of the stream now passes on the east side of the island, where it has excavated a channel four feet deep, which is daily enlarging as the opening in the dam advances towards completion. The increased volume of water thus forced around the Smitland side of the island is likewise opening the bar at the foot of Cumberland, while the channel on the west side is filling up rapidly. There is now three and a half feet water over the lower bar; should it be desirable to increase the depth, it may readily be effected by throwing out a dam two hundred yards in extent at the foot of Cumberland island, by which the water will be confined to a smaller space and produce the desired result.

A sketch of this work, together with all those which are completed or are in progress, exhibiting the shiftings of the bars since the last report, will be forwarded to the department as soon as drawings can be made.

The works at the Sister island have produced a decidedly favorable effect upon the navigation at that point; bars have formed against the dams which concentrate the water between the lower island and the dam on the western side; this dam was not commenced at the shore but at a gravel bar near it, which it was thought would not cut away. A small channel has, however, been formed between the dam and the shore which it is feared will injure the navigation; this must be closed. It will probably be necessary at some future period to throw a dam from the second Sister island to the east shore. The dam which runs from the lower Sister to this shore has entirely closed the channel where formerly ran at least half the water of the river.

Since the last report a dam has been constructed at Three Mile island, which will probably remove all difficulty at this point; it is not entirely completed; but when finished the bars which now occasion delay will soon be excavated to the required depth by the water. A small force intended for the Cumberland dam was directed by the superintendent to accomplish this object on their way down; after working a month it was found inexpedient to proceed on account of the low stage of the water, which rendered it difficult to get rocks to the site; the prosecution of the operations was therefore suspended until a rise in the river.

The bar at Scuffletown no longer presents an impediment to the navigation; the dams have concentrated the water and formed a permanent channel; this was formerly one of the most difficult on the river.

The works at French island have also proved efficient, and require no further expense; boats pass at all seasons drawing three feet water.

From Louisville to Cincinnati the navigation is interrupted by no obstacle of sufficient magnitude to render further attention necessary.

The only places in this river by the improvement of which an advantage commensurate with the expenses of construction could be secured are Hurricane island, Tradewater, Battery Rock bar, Cincinnati bar, five miles below Shawncetown, Raleigh bar, Mount Vernon bar, Flint Island bar, and Blue River bar. These are the only situations where three feet may not be carried at lowest water. It is impossible in the limited time allowed for my inspection (being compelled by my duties at Memphis to return there by the end of the month) to make drawings and estimates of these works. It may, however, be safely inferred that their cost will not exceed the rate of those already constructed.

I beg leave to call the attention of the department to the necessity of having surveys made of those points on the Ohio susceptible of improvement; this is a subject of much importance to the success of the works on this river; without surveys are made all estimates must be altogether hypothetical. It is especially desirable in locating the dams so to establish the outer ends that the current which receives its new course from the dam should not be thrown against the opposite shore, but be so directed as to pass tangent to the first point below. The dams at Scuffletown, French island, Three Mile island, and the Sisters would have produced a greater effect had this been attended to more carefully. It has not been in my power to leave my station at Memphis long enough to visit the works on Red river or the Arkansas; the former has been successfully prosecuted, as I learn from the superintendent, as far as the Caddo agency, a point about seventy miles from where it was commenced. About one-third of this distance he supposes was filled with timber when he began his operations; the latter has been completed so far as the removal of all the snags, sawyers, logs, &c., below Little Rock. The superintendent will leave here for Red river as soon as the Cumberland and Three Mile island dams are finished, with three hundred men, and the steamers Pearl, Java, and Souvenir, all in good order; keel-boats with the requisite supply of provisions are ready and will be taken in tow by the steamers. The Archimedes will commence operations at St. Louis as soon as she can get out of the Ohio, and continue to work down the river until February, when she will ascend the Red river. The Heliopolis, now thoroughly repaired and in perfect condition, will also descend to the Mississippi as soon as the rise in the Ohio will permit, and will commence operations below the mouth of that river and remain there during the whole season.

In the disposition of his forces, his plan of action, the economy and system observed in the execution of the works, in the perfection of the machinery used, and in the selection of agents, the superintendent has exercised good judgment, and has produced most favorable results.

These improvements require much of the personal attention of the superintendent, but from the extent of country over which they are spread it will not be possible for him to bestow upon all that kind

of supervision which they demand; I would therefore suggest to the department the propriety of such a division of the works amongst different superintendents as shall secure to each the attention which it merits.

I have the honor to be, sir, your obedient servant,

Gen. CHARLES GRATIOT, *Chief Engineer*

A. H. BOWMAN, *Lieutenant of Engineers.*

H 1.

Annual report of work done for improving the navigation of the Ohio, Mississippi, Arkansas, and Red rivers, from the 1st of October, 1833, to the 30th of October, 1834.

In the months of October, November, and December, 1833, and January and February, 1834, the steam snag-boats and the machine boats worked by hand removed from the bed of the Mississippi and Arkansas rivers two thousand nine hundred and twenty-two snags, and in the same time the crews of those boats cut from the dry bars of the Arkansas, and felled from the bluff banks of the Mississippi, five thousand nine hundred and ninety-three trees.

One thousand three hundred and eighty-five of the snags removed were taken from the bed of the Mississippi, and one thousand six hundred and twenty-one trees were felled from its bluff banks. One thousand five hundred and thirty-seven of the snags were taken out of the bed of the Arkansas river, and three thousand three hundred and seventy-two of the trees were cut from its dry bars.

The work done in the Arkansas river has produced a very beneficial effect, but has not been completed to the full extent as far up as Little Rock, the highest point to which the work was carried, owing to the stage of water being too high during part of the time the boats were operating in that river. The full amount of the appropriation for that river has been expended. The number of snags removed exceeds the amount reported by Lieutenant Brown, in his examination, to have been in that part of the river.

The work done on the Mississippi during the year has been of much advantage to the improvement of its navigation. The loss of boats during the last year by snags in that river has been less than in former years. But three steamboats were lost in that time. The first, the *Napoleon*, struck a snag twelve miles above the mouth of the Ohio in March last, when the water in the Mississippi was much lower than the Ohio, consequently backing the former river. The steamer *Napoleon* was running up in the back water and struck a snag, formed by a large tree which had a few months previously fallen in from the bluff banks, the top of which was but just under water, and, owing to there being no current, the snag made no breaker. The other two boats were lost during the low water. The "*Jefferson*" was bound up, struck some obstruction lying on a sand-bar, supposed to be three feet under water, which made no breaker. The *Return* was bound down, struck a snag or log lying on a bar, making no breaker in the water. Obstructions of this description are numerous on the bars of the Mississippi, and dangerous to the navigation in low water. The current in its course on the bars is much broken and kept in continual commotion, resembling in appearance numerous breakers, arising from obstructions lying on the bottom of the stream, but are occasioned by the course of the water gliding swiftly over the uneven surface of the sand; consequently, where there are logs and roots lying on the bars, the break of the water over them is not perceptible by the navigator; the boat striking is the first notice he can have of the hidden obstruction. To remove all the obstructions of that nature will be found impracticable, as they cannot be seen; of course, cannot be removed. It is, however, but a small portion of the year that such obstructions are dangerous. When the water is six feet above its lowest stage the heaviest boat passes over them without a possibility of injury. The water does not fall to that low stage more than two years out of three, and when it is so low the period is short, not usually more than six weeks. I have heard of no losses of flat-bottomed boats in the Mississippi by snags during the year; still they may have occurred unheard of by me. I am of opinion that the steam snag-boats will be able to remove all the accumulation of snags formed from the freshets of last summer during the present season of operations, notwithstanding they have not been worked in that river during the months of August, September, and October, as in former years. Owing to an early fall of water in the Ohio river, the boats were not got out before the water was too low for them to proceed down to the Mississippi. The delay was unavoidable, as the boats could not proceed to work until they had received some necessary repairs, which could not be undertaken until after the appropriations were made, which was late in June, and funds were not received until the 20th of July for that service. The *Heliopolis*, being five years old, required extensive repairs—a new bottom, and partly a new deck. She is now in good repair, having had new plank last year from the light water line up to the beams, and this year she has had a new bottom below the water line, and all the forward decks and beams new. The frame of that boat is of locust timber, which is yet perfect. The *Heliopolis* is yet in the Ohio, and ready to proceed to work in the Mississippi by the first rise of water of sufficient height to allow her to pass the bars. The *Archimedes* is in the Mississippi, and in full operation, removing snags since the — instant. She will work from the mouth of the Ohio up to St. Louis as long as the river remains clear of ice, and will then proceed down to a point where she can work free from interruption by frost.

In the months of October, November, and part of December last year, the dam at the head of Cumberland island was progressed with until the water rose too high to admit of its further prosecution. In September of this year the dam formerly begun at Three Mile island was finished, and the channel of the river at that place improved to the full extent of former calculations. Early in October the work at the dam at the head of Cumberland island was again resumed, and is now so far finished as to warrant the belief that it will be complete in ten days from this time. Of the success of this work I am now able to state to the department, in positive terms, that it has been eminently successful. The foundation of the dam has now stood the freshets of two years without a break in it. The channel has been turned to the left of the Cumberland island, where, at low water, at the time the dam was commenced, the bar was three feet above the level of the water from the Kentucky shore to the island, through which the channel now flows with a greater depth of water by twelve inches than there is on many other bars between it and Louisville, Kentucky. The channel over the bar at the foot of the Cumberland island has also been deepened at least one foot, and in a few months will, in all probability, be much further improved, as well as the channel at the head of the island, which is improving in depth rapidly from day to day.

In relation to the improvement of the bars on the Ohio river by wing dams, there can no longer be a doubt of the great benefits already produced by those built. And should that system of improvement be proceeded with by the government, there can be no doubt of obtaining four feet of water at its lowest stage from the Mississippi to the falls in the Ohio, and from Louisville to the mouth of the Ohio canal, at Portsmouth; and from thence to Pittsburg, three feet six inches may be obtained by the same system of improvement. All the dams that have been built on the Ohio below the falls have been permanent, and produced the good effect anticipated to its navigation.

Preparations have been made for the removal of the great raft in Red river. I have a sufficient force for that work now engaged and at work on the dam at the head of Cumberland island, from whence I shall proceed to Red river on the 15th instant.

HENRY M. SHREVE, *Superintendent.*

We, whose names are herunto subscribed, do hereby certify that we have been navigators of the Ohio river during the last ten years, and were well acquainted with the bars at which dams have been built under the superintendence of Captain Henry M. Shreve, and do believe that the improvement of the channel at these places is permanent, and that the depth of water at its lowest stage is increased to about double what it was previous to the construction of the dams; and that the dam built at the head of Cumberland island, in particular, is a permanent and valuable improvement to the navigation of the Ohio river, and of great importance to the town of Smithland, Kentucky, so much so that it has enhanced the price of property at that place to more than double its original value. We do unhesitatingly state that the channel to the left of the island, where the bar from the Kentucky shore to the island was dry, is now a good and safe navigable channel, and affords more water at this time than is to be found over many other bars between it and the falls of the Ohio, and that the channel will continue to improve for several years.

ABRAM TYSON.
HENRY LEE.
THOMAS RIDDLE.
JOSEPH PIERCE, Jr.

NOVEMBER 10, 1834.

SMITHLAND, *Kentucky, November 12, 1834.*

SIR: We, the undersigned, citizens of Smithland, having felt deeply interested in the improvement of the channel at the head of Cumberland island, (thereby opening the communication at all seasons with the Cumberland river, and removing the obstructions at the foot of said island,) have noticed closely and steadily the progress of the work from its commencement to the present time, and, from the perseverance and skill exhibited by you during its progress to its completion, we feel it a duty we owe to you to say that the manner in which said work has been conducted has our full approbation, and that you are entitled to our gratitude and that of the public generally as the projector and executor of so important an improvement.

With profound respect, your obedient servants,

William Gordon.

Captain H. M. SHREVE.

H 2.

MEMPHIS, *Tennessee, November 12, 1834.*

SIR: I subjoin a report of the progress made in the improvements on the Cumberland river during the last two years.

The obstructions to the navigation of this stream, for the removal of which appropriations have been made by the general government, may be classed under three separate heads, differing from each other in their nature and in the means necessary to be used in overcoming them.

Of the first class are snags, sunken logs, and projecting trees.

Of the second class are rocks, whether occurring in detached masses or in reefs extending across the channel.

The last class consists of gravel, sand, or shell bars.

From the character of the banks of this stream, which are generally rocks, it is subject to none of those changes that render it so difficult to effect permanent improvements on the Mississippi. It may fairly be inferred that if the snags and logs are once removed, no impediment from such causes is to be apprehended in future.

The second class of obstacles exists only to a limited extent, and, from their nature, can never recur when once destroyed.

The most serious difficulty in the navigation, and that which will require far more time and the use of more expensive means for its removal than the other two conjointly, arises from the shoals and bars.

These are, in general, composed of coarse gravel, sand, and shells, sometimes cemented into masses, forming pudding stone, and at others lying loose, and changing their position whenever a strong current is brought to bear upon them. The bars usually stretch diagonally across from the convex points, where the direction is suddenly changed, or below the mouths of other streams, and at the head of island chutes

The means of effecting improvements in the navigation of the river, when it is obstructed by the obstacles above named, must vary according to the nature of the obstruction, and do not differ materially from those already described as used on the Ohio for similar purposes.

The snag-boat, which has been found so efficient in removing sunken logs and trees on the Mississippi, has been adopted on the Cumberland with like results. It has also proved itself a powerful engine, when properly managed, for removing detached masses of rocks. When these are firmly imbedded in the sand, or are too large to be displaced, they are blasted, and the fragments, being raised by this boat, are carried to the wing dams, to the construction of which, at Harpeth shoals, they contributed no inconsiderable portion.

Lateral dams have been commenced for removing some of the bars, and have, in general, produced the desired effect by concentrating the water upon one part of the shoal, and increasing the velocity of the current. In some places, however, even the additional force thus given to the water has been insufficient to produce the expected result, owing to the compact nature of the formation and the size of the gravel. In such situations it will be necessary to adopt the plan, occasionally resorted to on the Ohio, of attaching scrapers to the steamers, and loosen the gravel with them; when once in motion, they are easily carried, by the force of the stream, into the deep places.

Operations were commenced on the Cumberland in October, 1832, with all the hands that could be collected so late in the season. Part of this force, under charge of a suitable agent, was directed to begin at Nashville; and, proceeding down the river, to cut all the projecting trees, and all snags upon dry sand-bars, and in the island chutes, where it could be effected.

In December, this part of the work had progressed as far as the foot of Harpeth island, a distance of thirty-six miles. During the same period, the balance of the laborers, under the direction of the superintendent, were engaged in quarrying rocks for the dam at Harpeth shoals. All operations ceased in December, on account of cold weather, and were not resumed until July, 1833, when the work at Harpeth island and the Flax Patch proceeded. These dams were completed, with the exception of one hundred and fifty yards, which, together with some repairs that had become necessary, have been accomplished this summer. A sketch of these works will be forwarded as soon as practicable.

A stratum of rock, averaging eight inches in depth, was taken out of the river between Harpeth island and the right hand shore, throughout the whole length of the island, and deposited in the dams. While these operations were going on, the same agent who had been employed the previous summer was prosecuting the clearing of the banks, which was finished as far as Camp Rowdy in September.

The superintendent commenced this season in July, with the repairs of Harpeth island dam. In September he left that place with fifty hands for the Devil's chute and Line island, in consequence of the complaints made of the difficulties experienced at those points. A material improvement has been effected at the Devil's chute by the removal of the point of rock on the left hand side of the channel.

At Line island the dams have been marked out and commenced; the snag-boat has been employed in removing the wreck of the steamer President, which sunk directly across the principal chute at this place. This dam will be about one-fourth done by the 15th of next month, beyond which time it will not be practicable to prosecute the work. When the dam at Line island is completed, it is contemplated to move up the river to Nashville, and in descending to remove all snags, and sunken logs, and detached rocks which remain; and also to construct such wing dams as are most essential to the low-water navigation.

This plan would, in the first instance, have been most judicious, and was only departed from by the superintendent for reasons already stated—that the obstructions at Line island and the Devil's chute were too important to be suffered longer to remain.

The services of the steamer Virginian have been wholly lost during the latter part of the season, by her accidentally striking a snag in Palmyra Island chute, in descending to Line island, by which she was so much injured as to render it necessary to run her ashore. She has since been repaired, and is again afloat, but, from the low stage of water, will not be able to reach her place of destination. Little has been done towards removing the snags and logs from the bed of the river; this will constitute one of the earliest objects to which the attention of the superintendent will be directed the approaching season.

A dam is required at Nashville island, to project from the left shore, by which the water will be made to pass down the right hand channel. Dams are also essential on the bars at the following places: Sycamore creek, Harpeth river, Palmyra island, Yellow creek, Bald island, Dover island and shoals, Gatlin shoals, Shelly's island, and Ingram's shoals; for all of which places sketches will be forwarded. There are also shoals at other points which will require attention if the work of improvement be pursued as far as it is capable of being with advantage. Of this class may be mentioned Martin's shoals, Wildcat shoals, Wells's island, Elk creek, Boyd's shoals, Little river, McKnabb's bar, Big and Little eddy, Big and Little Horse ford, and a reef of rocks four miles below Camp Rowdy.

At Harpeth, Dover, and Gatlin shoals, the Devil's chute, and the Big Horse ford, there are detached rocks in the channel which must be removed. When these improvements are completed, there will remain no further means of benefiting the navigation of the Cumberland river from Nashville to its mouth.

In the prosecution of the improvements intrusted to his charge, the superintendent has evinced good judgment, and a thorough acquaintance with the river. Hitherto, the operations have unavoidably been too widely extended to produce the most favorable results. It is his intention, during the ensuing season, to concentrate his forces, and to leave behind him in descending no obstructions which it is possible to remove.

I have the honor to be, very respectfully, your obedient servant,

A. H. BOWMAN, *Lieutenant of Engineers.*

General CHARLES GRATIOT, *Chief Engineer.*

I.

CUMBERLAND ROAD OFFICE, *Columbus, Ohio, October 18, 1834.*

SIR: In compliance with the circular of the department of the 6th of August last, I have the honor to submit a report of the progress made since the 30th of September, 1833, in the construction of the Cumberland road in Ohio west of Zanesville:

Masonry.—The extension of the wing walls of the culvert on the twenty-second and twenty-third

miles west of Zanesville, rendered necessary by an improvement in the grade of those miles, has been completed. The abutments of the bridge over the canal at Hebron have been finished. Early in the month of July it was found that the wooden superstructure erected over Big Walnut creek was failing so rapidly as to require the travel to be diverted from it, and the bridge to be supported by a pier intermediate between the abutments. This has been built of excellent materials, and the workmanship well executed. In order to counteract the diminution of the water-way caused by the erection of this pier, the space between the abutments has been enlarged by the removal of all superfluous earth, which has increased the capacity of the bridge for passing water during any unusual rise beyond what it possessed previously to the construction of the pier. This was rendered the more necessary from the fact of the water-way being already too limited to vent the water during an uncommon freshet, such as occurred in the early part of July last. A double culvert has been substituted for the small bridge on the fifty-first mile, which structure, together with the bridge on the fifty-third mile, as mentioned in my last annual report, was condemned as defective in workmanship. The latter bridge has been repaired and altered to an arched culvert.

The progress made in the masonry of the bridge over the Scioto river at this place has been as great as could have been expected, considering the very limited time of our operations this season, and the injury sustained by the destruction of the temporary bridge by the freshet which occurred the day after the recommencement of the work. The pier of this bridge has been raised above the highest known freshet, and the foundation of the west abutment completed, and the superstructure commenced. It is hoped the foundation of the one on the east side of the river will be laid this fall, although greater difficulties have been encountered in reaching a good foundation than was expected, in consequence of a wharfing constructed on made earth situated immediately in front of the site of this abutment rendering the usual means resorted to for the exclusion of the water unavailable. The foundations are all secured upon a grillage of hewed timber and planks two and a quarter feet in thickness. The masonry is built of the best quality of limestone, in masses weighing from 1,000 to 3,000 pounds each, and in point of workmanship is intended to be at least equal to any work of a similar kind in this country. The masonry between Columbus and Jefferson is now under a complete course of repair. Many of the bridges and culverts have been taken down and reconstructed, with a view not only to an increased discharge of water, but to their stability. The materials employed are of an excellent quality, and the workmanship executed in such a manner as to change entirely the character of the masonry on this portion of the road. The contract for building the bridges and culverts on the ninth and tenth miles west of Columbus, entered into by Brodrick and Risly in the year 1831, has finally been brought to a close by the government completing the work, with the consent of the parties interested, and the balance remaining, after deducting the cost of completion, paid to the contractors.

Between Jefferson and Springfield some materials have been delivered for bridges and culverts, and the work commenced. A good building material on the two extreme points of this line (being the only localities on this portion of the road affording any stone) proves to be more scarce than was at first anticipated. This will increase the cost of the masonry considerably from the original estimate.

Milestones, with suitable references as to the distances of the several towns, have been put up between Zanesville and Columbus.

All the masonry this year has been executed by day's work by the government. The materials of every kind have been selected with care and a view to their indestructibility, and the workmanship is such as to do great credit to the mechanical skill of those employed.

Carpentry.—The wooden superstructure of the bridge over the canal at Hebron has been completed, and forms one of the most prominent improvements made to that portion of the road. The materials of which it is constructed are of white oak, selected from the best growth of that description of timber in the neighborhood, and white pine lumber, of which the bridge is finished. The wooden superstructure of the bridge over Big Walnut creek has been repaired and strengthened by additional braces and the renewal of some of the principal timbers. The cause of the failure of this structure is to be attributed to the sizes of the timbers not being well calculated to its great span, defects in the materials employed, and the manner in which the work was executed. Some slight repairs will be necessary to the other wooden superstructures of the bridges east of this place, caused only by the ordinary wear of the travel over them.

The greater part of the lumber for the bridge over the Scioto river has been got out and planed, ready for framing, and is now covered and piled for seasoning and preservation from the weather during the approaching winter. This lumber is principally of yellow pine, selected with great care from the pine region in the neighborhood of the Ohio river.

The wooden superstructure of the bridge over the Big Darby creek will require to be strengthened by the addition of upper diagonal braces, in order to counteract the tendency which the upper strings have to deviate from the line of the axis.

Preparations have been made to accomplish this work the present month. The flooring of the bridge over Little Darby creek will require repair.

The carpentry this season has been done by day's work by the government, and in such a manner as to leave no doubt of the permanent advantage the road will derive from the character of this part of the work.

Covering.—The third stratum of metal has been placed upon the twenty-one miles contiguous to and west of Zanesville, and this portion of the road has been accepted by the State, and is now under its control. In consequence of the bad quality of the material employed as a covering on eleven miles of this road, it was found necessary to prepare about 2,200 rods, or 7,260 perches, of additional metal, in order to place this section in a proper condition to be received by the State. The first layer of metal has been placed upon eleven miles of the road, viz: from the twenty-second to the thirty-second mile, both inclusive, west of Zanesville, and the second layer on nine and one-eighth miles of the same section, extending to the first quarter of the thirty-first mile; the second stratum will probably be completed at the end of the thirty-second mile the present month. For the same portion of the road 1,854 rods, or 6,118.2 perches, of limestone of an excellent quality have been delivered for the third stratum or last cover of metal. Of this quantity 1,324 rods, or 4,359.2 perches, have been prepared, ready to put on the road. The section of country for about forty miles east of that place, and bordering on the road, not affording a good material for covering, and the carriage of limestone by the canal being of itself very expensive, without taking into account its transport along the line of the road, it was not considered advisable to extend the limestone covering further than the termination of the thirty-first mile. From thence to the vicinity of this

place it was thought most judicious to have recourse to the banks of gravel for a material to cover this district of the road. This plan was accordingly adopted, and the best gravel to be found in the neighborhood was selected, well screened and broken, not to exceed the prescribed weight of four ounces. A considerable portion of this gravel is limestone, increasing in purity the further we advance west.

For the first and second strata of metal between the thirty-second and forty-sixth mile west of Zanesville 4,832 rods, or 15,945.6 perches, have been delivered; of which 3,109 rods, or 10,259.7 perches, have been prepared ready for putting on the road. The advanced period of the season will not permit, however, any portion of this road being covered with metal the present year.

About eighty rods of the first and second strata of metal on the twenty-ninth and thirtieth miles were washed away by the breaking of the banks of the canal feeder in that neighborhood during the freshet in July; the water from the feeder passing into the south fork of Licking creek was dammed up by the stone bridge across that stream, causing it to flow over the road.

The preparation of the metallic covering between the thirty-second and forty-sixth miles, and that of the third stratum of metal for the eleven preceding miles, have been done by the government by the day within less than three months, during which period the cholera made its appearance on a portion of this district of the road, which rendered it necessary to suspend operations for about two weeks, at a time most favorable for the advancement of the work.

Since the date of my last annual report the contracts for putting on the third stratum of metal on the second, third, and tenth miles west of Zanesville have been relinquished, and the contracts for putting on the first stratum of metal on the twenty-fifth and twenty-sixth miles abandoned. The work was subsequently completed by the government.

Graduation.—Previous to the delivery of the twenty-one miles of the road west of Zanesville to the State the grade was thoroughly repaired, the shoulders widened and made up, the slopes brought to the proper angle with the horizon, and the side drains and lateral ditches opened and reformed. The reduction of the grades of the hills on the twenty-second and twenty-third miles west of Zanesville has been completed, and those miles, together with the twenty-fourth and twenty-fifth miles, have undergone a general improvement from the original construction, which was exceedingly defective. The graduation of the road between Hebron and Columbus was finished about the close of last year. Some improvements, which time has developed, and repairs incident to a newly-made road after a winter's travel over it, are now being made on this section.

The graduation between this place and Jefferson is now undergoing a thorough repair; very great improvements have been made on this part of the line; extensive lateral drains have been cut, which the flat, level character of the country and heavy growth of timber upon it greatly required, in order to pass off the water from the road as speedily as possible. About two hundred stumps, left in the bed of the road, have been removed; and the clearing off the timber, which had been but partially effected, is now being done. The freshet in July having again injured the road on the second and third miles west of this place, it was determined, in order to guard against all danger from that source in future, to reduce the embankments between the small stone bridges, forming long and gentle curves, which would pass the water in time of a freshet, and, at the same time, be so low as to make no head by which the road could be injured. This course was considered more advisable than the only other feasible plan—that of levelling the river banks; which construction would not have been so immediately under the eye or control of the superintendent, and therefore more liable to accident, by which the safety of the road would be endangered in the event of a freshet.

The reduction of the grade of the hills to the east and west of Big Darby creek, on the thirteenth mile, has been completed in a very satisfactory manner by the contractor.

Considerable progress has been made in the graduation of the road between Jefferson and Springfield, which is being done by day's work by the government, as was the case with all the work of this description executed this season, with the exception of that placed under contract the preceding year. The portion of road already made on this section has sustained the travel upon it better than any heretofore constructed.

Clearing and grubbing.—The clearing and grubbing between Jefferson and Springfield have been completed, and for about six miles west of the latter place. The continuation of this work towards the Indiana line will be prosecuted this season so long as the weather shall prove favorable for such operations. This work is also being performed by day's labor by the government, and in a very satisfactory manner.

The project of operations for the remaining quarter of the year 1834, and during the year 1835, is as follows:

Masonry.—To raise the wing walls and parapets of a bridge on the thirty-fifth mile, rendered necessary by an improvement in the grade of this mile; repoint such structures as are situated on the portion of the road to be delivered to the State the coming year; complete the abutments and pier for the bridge over the Scioto river at Columbus; finish the repairs of the masonry between this place and Jefferson; complete the necessary bridges and culverts from thence to Springfield, and put up milestones as far as the latter place.

Carpentry.—To complete the wooden superstructure of the bridge over the Scioto river, and those across Deer and Beaver creeks, on the twenty-third and thirty-seventh miles west of Columbus, and make the necessary repairs to those east and west of this place.

Covering.—To put on the third and last stratum of metal between the twenty-second and thirty-second miles, both inclusive, west of Zanesville; put on three strata of metal from thence to the forty-sixth mile, and deliver these portions of the road to the State; and prepare and cover the road from the forty-fifth mile west of Zanesville to the fourteenth mile west of Columbus with two strata of metal.

Graduation.—To prepare the surface of the road for the reception of the metal, and complete the improvements in the grade east of this place and west as far as Jefferson, and finish the graduation between the latter place and Springfield.

Clearing and grubbing.—To complete the clearing and grubbing through the State. The following causes have operated against the advancement of the work the present year: 1st. The late day at which the appropriation of money for the road was made, by which the best portion of the working season was lost. 2d. The recommencement of operations during the time of harvest, when a majority of the laboring class was engaged for that purpose. 3d. The occurrence of a freshet in July, unprecedented in that season of the year, by which a portion of the road was very considerably injured, and the temporary bridge erected over the Scioto river destroyed. 4th. The appearance of cholera along the line of

operations, together with a more than usual prevalence of disease incident to the unhealthy district of country through which the road passes.

Resources of the country as regards materials.—Granite in detached masses, limestone, flint, sandstone, and slate of various qualities, occur at different distances from the line of the road. *Lime* of good quality can be had in abundance at a reasonable rate. *Sand*, in considerable varieties, is found at the streams crossing the line of the road, some of which is pretty clean and sharp, but generally of too fine a grain for stone mortar. During the present season recourse has been had to gravel banks, from which an excellent material has been obtained for forming a good cement. *Lumber.*—Black and honey locusts, white, swamp, black and red oaks, hickory, black and white walnuts, sugar and white maples, yellow and white poplars, blue and white ashes, chestnut and beech, are to be found in greater or less abundance throughout this region of country.

Plan of administration.—The superintendent, aided by three assistants, one inspector and assistant, a superintendent of masonry, and four principal overseers, supervises the operations on the road. Two clerks are employed in the office. Accompanying this report is a list of contracts entered into previously to the 30th of September, 1834, with their condition up to that period, by which it will be perceived that they have all been brought to a close in this State.

An annual statement of the operations on the road up to the 30th ultimo, with an estimate of funds required for the service of the year 1835, and for the completion of the road through the State, will be forwarded to the department as soon as they can be prepared.

All which is respectfully submitted.

HENRY BREWERTON.

Brigadier General CHARLES GRATIOT, *Chief Engineer, Washington.*

K.

WEST POINT, N. Y., June 17, 1834.

SIR: In compliance with your request, the undersigned have attended as a board of visitors during the general examination at the United States Military Academy just concluded, and have "directed their inquiries to a full and free investigation in regard to the course of instruction, both military and scientific, and to the internal police, discipline, and fiscal concerns of the institution." That these several objects of inquiry might be attended to as thoroughly and successfully as possible, the board at its organization referred them to separate committees, who have presented full reports with regard to them, accompanied by some suggestions for the improvement of the institution. Copies of these reports are forwarded to you; and the board take the liberty of referring you to them for details, while they confine their joint report to a general and brief view of the present condition of the academy.

The fidelity of the professors and the assiduity and proficiency of their pupils were tested by an examination on the several subjects, extending over eleven days, and continued each day for eight hours.

The sciences not strictly professional, included in these examinations, were mathematics, taught here from the elements of arithmetic, to the profound theorems of the integral calculus; natural philosophy, including mechanics and astronomy; chemistry, in connexion with mineralogy and geology; and, lastly, rhetoric and moral and political science.

The subjects of professional study are civil and military engineering, and infantry and artillery tactics, with the last of which are connected ballistics and pyrotechny.

A part of the first two years is devoted to the study of the French language, with which a competent acquaintance is required of the cadets.

Lastly, great attention is very properly paid in this academy to the art of drawing, the practical applications of which are so frequent and important in the military profession.

These subjects, combined, certainly constitute an excellent preparatory education for officers of the army, and the examinations proved that they were faithfully and skilfully taught. Marked inequalities were, indeed, observed in the proficiency of the cadets, and defects remain to be corrected in the organization of some of the departments; but still the exhibition was, on the whole, highly satisfactory and gratifying.

Frequent opportunities were presented to the board of witnessing the practical skill of the corps in infantry and artillery exercises; and their fine and soldierlike appearance in the ranks, and the accuracy with which they executed their various evolutions, proved that this essential part of the duties of a military academy was sedulously attended to by both officers and cadets.

The discipline of the institution was carefully examined in its various bearings, and the board have reason to think that it is in an excellent state. The laws seem to be executed with a stern regard to the good of the service, yet with kind and paternal feelings; and the officers and professors are believed to be generally both beloved and respected.

The internal police of the institution was found to be carefully attended to. The rooms in the barracks occupied by the cadets exhibit a gratifying appearance of neatness and order, while, at the same time, they give rise to regret on account of the inadequate accommodation which they offer. The mess-table is well supplied with plain, but good and wholesome food. In the event of sickness, which the board are happy to find has been lately of rare occurrence, suitable and comfortable accommodations are provided at the hospital, with the best medical attendance.

The board directed an inquiry to be instituted, with as much minuteness as circumstances would admit, into the fiscal concerns of the institution. The result, which will be found fully detailed in one of the reports sent herewith, is, that the accounts are kept in a correct and satisfactory manner; that the expenditures are made in accordance with the appropriations; and that a proper attention is paid to economy in the expenses of every kind. To prevent extravagance in the cadets, there is a regulation which prohibits to them the possession of money, or the use of it, or expenditure of it, except with the consent of the superintendent, who stands with regard to them in the place of a parent, and who, it is believed, exercises his authority with enlightened discretion.

The whole investigations of the board lead them to the conclusion that the Military Academy is a most valuable and essential part of the army establishment of the United States; that, at a cost so low as

not to exceed that of a second-rate man-of-war, it prepares and can spread over the whole country officers instructed and capable of giving instruction in the military art; and thus, without the danger arising to liberty from large standing armies in time of peace, enables the government to fulfil the duty which the Constitution so solemnly enjoins of "providing for the common defence;" and, lastly, that if our young citizens were commissioned in the army as lieutenants in the first instance, as they must be if this institution were abolished, they could not obtain in four years even the same military knowledge as the cadets, while their probation and education would be far more expensive to the country.

T. B. DALLAS, *Secretary.*

The undersigned freely subscribe to the within report without expressing an opinion with regard to the last paragraph.

WM. SMYTH.

J. W. SCOTT.

THE SECRETARY OF WAR.

The undersigned, having been invited to be present as a visitor at the general examination of the cadets of the United States Military Academy, can, with the greatest pleasure, bear testimony to the proficiency generally of the pupils in the various departments of learning, both military and scientific, which have occupied their attention; but in conforming to the letter of instructions forwarded to him by the honorable the Secretary of War, which is as follows: "The object of this regulation is, that the War Department may be correctly informed of the condition and management of all the concerns of the academy; it is therefore desired, in conjunction with the other members of the board, that your inquiries may be directed to a full and free investigation in regard to the course of instruction, both military and scientific; to the internal police, discipline, and fiscal concerns of the institution; for which purpose every facility will be afforded by the superintendent. The result of your observations, with any suggestions for the improvement of the academy, will be communicated to this department"—feels it to be his duty, without an utter abandonment of opinions long since formed and deliberately entertained and expressed for years, but with great deference to the opinions of other members of the board, to dissent from some of the views contained in the general report which has been submitted by the military committee.

Deeming it unnecessary to inquire whether a military academy is necessary and proper for the existence or support of a free republican government, where every citizen will be at all times ready to stand forth in defence of the liberty and independence of his country, the undersigned will proceed simply to make a few observations, which, he thinks, may justly be presented with regard to the administration, and as suggestions for the improvement of this establishment.

By reference to the history of the military school at West Point, it is worthy of remark that, in the early usage of the government of the institution, the pupils were selected mostly from the indigent sons of that class of revolutionary worthies who had shed their blood in defence of our national rights and independence. It would seem, then, that this institution was principally designed by its founders for the education of indigent and meritorious young men. A list of those, however, who have been admitted as cadets shows conclusively that a large proportion of them have been drawn from the rich, the influential, and the wealthy classes of the community; and this, doubtless, may be attributed to the power of nomination and selection being lodged in the hands of senators and representatives.

That such a mode of recommendation and selection is every way objectionable and unjust, there certainly can be but one opinion among men of candid and impartial minds, to say nothing of the bad policy of educating and rearing up, either for the army or for the walks of civil life, the sons and relatives of the rich and powerful at the *public expense*.

Any institution, supported by the funds of the national government, which closes its doors to any class of merit, however friendless and indigent, seems to the undersigned to be unequal and partial in its operations, inconsistent with the spirit and genius of our liberal institutions, anti-republican in its tendency, and should not be tolerated.

Another and most important objection is the *exclusive privilege* to which its graduates are entitled, of being promoted to stations in the army, while other individuals in society, who have not had the advantages (free of expense) of instruction at this Military Academy, though their talents and qualifications may be sufficient, and in every way equal to those of the cadets, are entirely excluded.

The undersigned has thus briefly and candidly sketched some of the objections which, it seems to him, must occur to the mind of every one to the administration of this establishment. Nor is he singular in these views. The people of the State of Ohio, of which he has long been an humble citizen, have been led to examine into the merits of this institution, and have, unless he is greatly deceived, very distinctly declared their opinions, not only through their legislative body, but by an expression of public meetings of intelligent and respectable citizens, against the *expediency* as well as the constitutionality of this seminary.

It is not the province of the undersigned to suggest the remedy; that rests with the Congress of the United States, and not with the board of visitors. But he believes that nothing, at present, can have a tendency to allay the well-grounded objections and prejudices against this establishment, until merit and talents, and not the influence of wealth, or of personal or political *favoritism*, shall be the tests of admission.

JOHN HAMM, of Ohio.

Report of the committee on internal police.

The committee on internal police, whose duty it was made to inquire into the state of the public buildings, the accommodations for study, for recreations, and for sleeping; the subsistence and clothing of the cadets, and the state of the hospital, and the attention to the sick, have examined the various subjects submitted to them, and do now report the information collected.

The public buildings are of solid and permanent materials, and of good workmanship; they are in a state of good repair, and a remarkable degree of neatness and cleanliness everywhere pervades them.

In the main they are well adapted to the purposes to which they are appropriated; there are some exceptions, and to these attention is now invited.

The *north barracks* contain forty-eight rooms, and in each room are located from four to five cadets; whether this number is not too great, if the comfort of the cadets be consulted, is an inquiry well deserving consideration.

The rooms in the *south barracks* are thirteen feet six inches long and nine feet wide; the doors open directly into the piazza, and are immediately fronting the fireplace. In each of these rooms are located three cadets. The size and exposed situation of the rooms in these barracks, and the number of cadets quartered in each room, are inconsistent with the health and comfort of the occupants.

A radical alteration in these barracks ought to be made, and additional rooms for the accommodation of the cadets ought to be provided.

The rooms may possibly be rendered less exposed by enclosing the piazzas with a permanent wall, or with temporary blinds during the winter; but, with these alterations, additional rooms ought to be provided. The rooms are entirely too small for the accommodation of three cadets.

In the further prosecution of the inquiries submitted to us, we ascertained that throughout the whole establishment, no room was set apart for chemical purposes, or in which a laboratory had been erected, nor was there a room of adequate size provided in which might be kept the philosophical apparatus. A large and elegant telescope, understood to have cost fourteen hundred dollars, is placed in a slight wooden building perishable in its nature and insecure in its structure. A house erected with a view of supplying these evident and palpable deficiencies, that is to say, a house which should contain additional rooms for the cadets, rooms for the chemical and philosophical apparatus, if built of permanent materials and in a workmanlike manner, would increase the value of the real estate belonging to the government, by a sum nearly, if not quite, equal to the cost of the building.

The committee inspected the rooms of the cadets; great neatness, cleanliness, and order prevailed throughout. Upon inquiring into the cause of the great uniformity which pervaded each room, it was ascertained that the regulations of the institution descend to the most minute particulars, such, for example, as assigning a particular place for the books, caps, beds, tables, and, in truth, for every article of necessity or convenience belonging to the cadet. No cadet is permitted to use tobacco, or any inebriating drink; and to this regulation may, in part, be attributed the cleanliness of the rooms and the general good order which prevails in the institution.

Your committee next turned their attention to the subsistence of the cadets, and they were surprised to learn that no storehouse had ever been provided at public expense. A small wooden building has been erected at the expense of the contractor, in which are placed for safe-keeping the different kinds of crockery ware. Anything but order reigns. No improper imputation is designed to be thrown on the contractor; a different and a better arrangement cannot be made in a building of so small a size. A permanent building, of adequate dimensions, can be built for one thousand dollars.

The subsistence, as set forth in the bill of fare, and as is provided by the contractor, is abundant and wholesome, and sufficiently varied. The viands and vegetables are varied each and every day. The clothing of the cadets is abundant, of good materials, and supplied at reasonable prices fixed by the board of clothing inspectors. Each cadet is furnished with a check-book, and is not to be supplied with articles by the storekeeper, tailor, or shoemaker, without an order in such book from the superintendent, or, in his absence, of the commandant.

These regulations prevent the cadet from being overreached in prices he might be made to pay for articles purchased, and enables the prudence of the superintendent to inculcate lessons of economy. Articles of necessity and comfort are furnished him; those of luxury and unprofitableness are withheld from him.

Every part of the hospital is well arranged, and is characterized by neatness and cleanliness.

Whatever can render tolerable the bed of sickness, whether it be the appearance of the external objects, or the kindness and assiduity of the physicians, is to be found. Fortunately, the salubrity of the climate, and the elevation of the country, prevent the frequent occurrence of disease.

All of which is respectfully submitted, by order of the committee.

W. C. STANLEY, *Chairman.*

Report of the committee on the course of studies.

The committee on the course of studies report as follows:

The only preliminary knowledge required for admission into the Military Academy is reading, writing, and the first elements of arithmetic. Several previous boards have strongly urged the necessity of adding to these prerequisites; but while the importance of their recommendation must be admitted, the fear of excluding candidates from remote parts of the country, where the means of good education are not at command, has prevented its adoption. It appears, however, to your committee, that there could be no valid objection to extending the prerequisites at least so far as to include geography, (an essential practical science, not taught at the academy,) and English grammar and composition, to be tested by the ability to write correctly on some suitable theme proposed at the examination.

The science which is justly made the basis of instruction at the academy is mathematics. By far the greater part of the first two years is devoted to the pure science, and its applications are met with in nearly all the studies of the remaining course. The examinations included algebra, synthetic, descriptive, and analytical geometry, plane and spherical trigonometry, mensuration and surveying, perspective, and

the differential and integral calculus. These examinations were, on the whole, highly satisfactory, and showed, at the same time, the fidelity of the professors and the assiduity of their pupils.

Natural philosophy is the principal study of the second class. A thorough examination in mechanics having been held in January, the class were now only questioned generally on the subject, and the examination was principally confined to electricity, magnetism, optics, and astronomy, with which studies the class exhibited a competent acquaintance. Your committee are pleased to have it in their power to speak in terms of just praise of the manner in which this department is conducted.

The second class were also examined on chemistry, and your committee were well satisfied with their performance, especially when they consider the unmerited disadvantage under which the department labors. Instead of having an independent organization, established by law, it exists only by executive authority. In the merit roll, chemistry is valued at least one-third of natural philosophy. The acting professor, who has occupied his chair with acknowledged ability for many years, has only the pay of a second lieutenant, and is outranked at the academic board by the assistant professors, many of whom have been his pupils. Your committee cordially join in the recommendations made by previous boards, that the department of chemistry, including mineralogy and geology, be placed on the footing of the other schools, having a permanent professor, and two officers acting as assistant professors, to one of whom the subjects of mineralogy and geology might be specially intrusted.

Engineering and the science of war constitute the principal studies of the senior class. The first examination held was on these subjects, and it was certainly such as must have proved satisfactory to the board. The general excellence of the drawings exhibited and of the sketches executed on the blackboards during the examination was particularly striking.

Infantry and artillery tactics and pyrotechny also form important parts of the instruction of the cadets, but as these subjects have been specially referred to the Committee on Military Affairs it has not been judged proper to introduce them into the present report, any further than to state that the examination on ballistics exhibited one of the most direct and interesting applications of mathematics to the military art, and that it was conducted in a manner equally creditable to the professor and his pupils.

A part of the first two years is devoted to the study of the French language, with which the cadets are required to become at least so far acquainted as to understand its grammar, to be able to pronounce it intelligibly, and to translate it readily into English. They are also exercised in writing French themes. It is also to be regretted that very few of them make such progress as to be able to speak the language. The examinations in this department were as satisfactory as could be reasonably expected from the time allotted to the study.

In this academy great attention is very properly paid to the art of drawing, the practical applications of which are so frequent and important in the military profession. The proofs of proficiency in figure, landscape, and topographical drawing were very satisfactory. During part of the present academical year this department was under the superintendence of a distinguished artist, whose resignation and removal from the country are subjects of general regret.

The instruction in grammar, rhetoric, moral philosophy, and political science is confined to the senior year, which is loaded with professional studies. But five hours in two weeks are allotted to the recitations. The professor therefore justly complains of the want of time for conveying adequate instruction in his department. It appears to your committee that this evil might be remedied, first, by extending the requisites of admission to the degree which they have recommended; and, secondly, by teaching rhetoric to the third class instead of the first. This study ought not to be postponed until incorrect habits of speaking and writing may be confirmed; and, besides, your committee are informed that time can be at present better spared in the second than in any other year of the course.

The professor of this department is also the chaplain of the station, and divine worship is conducted by him once every Sunday in the presence of the officers and cadets of the academy. Your committee think it desirable that further opportunities of religious instruction should be given, but they would not propose that the attendance upon them should be compulsory. A separation of the chaplaincy and professorship is anxiously desired by the reverend gentleman who now holds these offices. There are certainly some good reasons in favor of this measure, and if the duties of both these offices should be increased, as proposed by your committee, this separation would probably become necessary.

Your committee, in compliance with their instructions, have inspected the cabinets of natural philosophy, chemistry, and mineralogy, and have found them generally in good condition, and containing many very valuable articles. The constant advances which the natural sciences are making require, indeed, that additions should be made to these cabinets from year to year, and appropriations will be wanted for this purpose; but the present collections are so extensive that no considerable expense need be incurred. Your committee have regretted to learn, however, that a large part of the mineralogical cabinet is not the property of the government, and they have to express their hope that the purchase of the entire collection will no longer be deferred.

Your committee have also inspected the library. It consists of more than eight thousand volumes of works, for the most part immediately relating to the subjects taught at the academy, the whole appearing to be judiciously selected, well preserved, and kept under good regulations. To keep pace with the progress of science, and to supply deficiencies already existing, it will be necessary, however, that additions be constantly made to it, and it is hoped that a liberal appropriation will be annually made for this purpose.

Among the books at present in the library is a very curious and interesting series of about one hundred volumes of old works on mathematics, natural philosophy, and astronomy, containing among others the works of Galileo, Kepler, and Leibnitz, and the original editions of Lord Napier's logarithms. It was with regret that your committee learned that a requisition had been made for these works, to be employed in the survey of the coast now going forward, and that they were accordingly on the point of being removed from the academy. From the contents and dates of the works, your committee presume it will not be pretended that they are *necessary* in the great geodisical operations for which they are asked, and therefore your committee think that the board ought to protest against their removal from the only library, professedly scientific, that belongs to the nation.

Though the subject of the public buildings has been referred to another committee, the committee on the studies hope they will be excused if they call the attention of the board to the rooms appropriated for the philosophical apparatus, the chemical laboratory, the mineralogical cabinet, and the library. These rooms are not only inadequate to their several purposes, but they are unsafe. The furnaces of the chemical laboratory are in a room with a wooden floor, immediately below the philosophical apparatus

and the library, and no part of the whole building is fire-proof. Besides, the laboratory and the philosophical apparatus are placed in the same rooms in which the classes are assembled to lecture, while the accommodation is scarcely sufficient for either of these purposes singly. On the whole, your committee think a new fire-proof building with rooms for a laboratory, the apparatus, a museum, and the library, and with suitable halls for experimental lectures, is exceedingly desirable. Your committee also think that an astronomical observatory ought to be established at this place. Its importance as a school of practice for cadets who may hereafter be called upon as engineers to conduct topographical and geodetical operations cannot but be felt; an excellent position for it is presented on the land where the instruments could be seated on the solid rock; the building could be constructed at a very moderate cost, and all the instruments necessary to furnish it are already in possession of the government.

Respectfully submitted to the board by the committee.

R. M. PATTERSON, *Chairman.*

JUNE 14, 1834.

Report of the Military Committee.

The committee on military affairs and discipline have the honor to report that they have particularly inquired into all the subjects intrusted to their examination, and that the result has been exceedingly satisfactory to them and creditable to the institution.

The committee directed, first, their inquiries to the class on engineering, and, in common with the other members of the board, they were highly delighted with the proficiency of the cadets. They were surprised to learn that the course of military engineering lasted only four months, and they must particularly commend the industry of both professors and students, which enabled the latter to acquire so much knowledge in so short a time. They found, likewise, a great want of models of the details of the works. These could be easily procured, and would facilitate a great deal the study of this science, which the committee cannot but consider the most important branch of the education which the cadets are intended to receive at West Point.

The examination on civil engineering was likewise highly satisfactory, and shows the particular care paid to it in the institution. The use to which the government, in time of peace, employs the officers of the army renders these studies particularly important, and the country at large will be pleased to learn the attention paid to them. In this department, likewise, models are wanted, and could be procured with very little trouble and at trifling expense.

The examination on artillery showed in the cadets a thorough knowledge of the theory of this science; and their exercises in field manoeuvres, target-firing, fireworks, and the explosion of a mine, left no doubt as to their attainments in the practice. The target-firing took place under very unfavorable circumstances, owing to the bad quality of the ordnance. The text books in this department are principally translations or compositions of the best foreign works, executed by the instructor himself, and highly creditable to his zeal and to his industry. The laboratory was examined, and the cadets seem to go through the preparation and manufacture of every sort of fireworks employed in war. The rockets were peculiarly remarkable for their brilliancy, and the space they went over, as compared with their size.

The ordnance was found by your committee very defective. The pieces are generally worn out, and some of them have been condemned as worthless. The shot received is very bad, and being in general too small for the pieces, and of irregular figures, prevents any accuracy at target-firing. The committee, however, have learned that a requisition has been made upon the Ordnance department, and that a compliance with it is looked for during the course of the present season. The committee have observed that all the carriages were of the oldest models, and they are of opinion that no pains ought to be spared to provide this institution with the newest and most approved inventions and models, in order not to teach the cadets to use and employ arms and machines which they will have nothing to do with when they enter on actual service.

The committee heard the examination upon infantry tactics, and saw the cadets exercising with great skill and precision. The manoeuvres of light infantry have been successfully introduced, and, although practiced but a short time, were very well executed. The arms were examined, as well as the accoutrements, and were found in the most complete order. The committee found fault only with the shape of the button used in the cadet's uniform. They are too large, and most inconvenient. When the belt, owing to the size of the cadets, comes to pass over one of them, either a most unseemly protusion is created, or a hole made through the belt, which entirely destroys the uniformity. It is considered that bullet-buttons could be advantageously replaced by flat or nearly flat buttons.

The committee next directed their attention to the military duties required from the cadets, and found them not to be oppressive, nor to abstract any more time from their studies than is absolutely necessary in order to preserve discipline, and give them military and soldierlike habits of precision.

The discipline was examined in its various bearings, and seemed excellent. By many inquiries it was ascertained that whilst power on the one hand was exercised in the most paternal manner, and always for the good of the service, on the other hand the officers and professors were generally found to be beloved and respected—a happy state of things, which the committee cannot commend too much. Some of the regulations contained in the pamphlet which was distributed amongst the board, seemed at first sight rather severe; but it was found compensated by the mildness of its execution. It is believed, indeed, that fewer offences have taken place under this liberal system than if too much rigor should be exercised.

The committee have been highly pleased with all that they have seen; and extending their observations to the vast field of improvements, they beg leave to suggest that since the United States have now added to their army a regiment of cavalry, the cadets ought likewise to be instructed in cavalry tactics. Thirty or forty horses would be sufficient, and could be used at the same time to teach the cadets the service of light artillery. The importance of these two branches of military knowledge is too obvious to require the committee to say any more on the subject.

Another suggestion the committee wish to make is, as to the necessity of a large hall, where military exercises may be, to some extent, conducted in winter. It is thought that this would be in a high degree conducive to the health and comfort of the cadets.

Before taking leave of this subject, the committee will indulge in a few observations upon the general results of the institution. However dangerous standing armies are to a nation's liberty in time of peace, they nevertheless possess immense advantages in time of war. The only way to reconcile the dangers and advantages of a standing army is to organize it in such a way that it may prove, as it were, elastic, so as to be able in the shortest time to assume from the smallest possible size the largest. In order to obtain this *desideratum*, a military academy is absolutely necessary, where the higher branches of the military science should be taught. Officers of infantry and cavalry can easily be recruited from the rank and file of the army; but the engineers, the staff, and the artillery, require men educated for these professions. In time of peace, those cadets who cannot be employed in these corps are embodied in the infantry and cavalry; but as soon as war should be declared, their services would be required in the scientific departments of the army, which would partake of the general increase, and their places in the line would be supplied either from the citizens generally, or from the rank and file of the army. From all these observations made by your committee, they are of opinion that the military education received at West Point fulfils entirely the objects of an institution, the necessity of which can scarcely be doubted.

The whole of which is respectfully submitted,

ACHILLE MURAT, *Chairman.*

The committee on fiscal concerns report :

That, in the discharge of the duties assigned to them, they have examined with as much minuteness as circumstances would admit, the accounts of the institution, and they take pleasure in saying that the result of their investigations has been highly satisfactory.

The committee directed their attention to three points involved in the resolution under which they were appointed: 1st. To inspect the accounts of the institution so far as to see that they are kept in a correct and satisfactory manner. 2d. That the expenditures are made in accordance with the appropriations. 3d. That attention is paid to economy in the expenses of every kind.

Heretofore two separate appropriations, under different heads, for the support of the Military Academy, have been made by Congress. The one is embraced under the item "for the pay of the army and subsistence of officers," for which the appropriation is general, and does not discriminate the amount appropriated for the pay and subsistence of the cadets from the pay and subsistence of the residue of the army; but the whole is included in one general item. This fund is disbursed by the paymaster stationed at West Point, who, by the "regulations," is "treasurer of the cadets." The amount of this fund annually expended, including the pay of the professors, has been estimated at \$93,566 52, and this may be safely considered a fair estimate of the annual expense of the institution for this branch of expenditure.

The other appropriation for the support of the institution is made for the Military Academy, and is specifically appropriated to the different objects of expenditure connected with the institution. These are, usually, for fuel, forage, stationery, printing, transportation, and postage, for repairs, improvements, and expenses of buildings, &c., for the pay of adjutant and quartermasters' clerks, for increase and expenses of the library, for philosophical apparatus, for models for the department of engineering, for models for the drawing department, repairs of instruments for the mathematical department, apparatus and contingencies for the department of chemistry, miscellaneous items, and incidental expenses of the academy, and for defraying the expense of the board of visitors at West Point.

The annual amount appropriated under this head for four years terminating with the year 1833 has varied from \$23,439 to \$36,765 per annum, the latter sum including an appropriation of \$16,000 for the erection of a chapel and a building for military exercises, which, being inadequate to these objects, remains unexpended.

Your committee investigated the accounts of the treasurer and of the quartermaster, which are kept in a correct and satisfactory manner, exhibiting in a tabular form the entire expenditure for a given period, arranged under appropriate heads, each item of which is supported by a voucher, without which the accounts would not be passed by the accounting department.

The expenditures are made in strict accordance with the appropriations, and the entire fiscal arrangements of the institution challenge the unqualified approbation of the most rigid scrutiny.

The third branch of investigation referred to your committee is one of unusual importance. It presents the inquiry "whether proper attention is paid to economy in the expenses of every kind" of the institution. It involves the personal expenses of the cadet and the general expenditures of the academy.

The regulations which prohibit to the cadet the possession or use of money, or the expenditure of it, except with the consent of the superintendent, who is placed *in loco parentis*, and exercises this important power with enlightened discretion, cannot be too highly commended or too scrupulously adhered to.

The pay and subsistence of the cadet is \$16 per month, and two rations, equal to \$12, making together \$28. To carry into effect the important regulation referred to, each cadet provides a check-book, which is ruled and arranged in tabular form, so as to exhibit in one view the expenditures of each period of two months, at the head of which are placed those charges which are regular, fixed, and always uniform. When the cadet wishes to obtain any article he must apply to the superintendent, who, if he consent, indicates it by writing in the opposite column, upon which the article is furnished to the cadet, and the charge is entered by the person furnishing it in another column. The entries in this check-book are constantly exhibited to the superintendent, and are the vouchers upon which the treasurer pays to the persons who furnish the cadets the amounts which may be due to them.

It is manifest that, while this mode of keeping the accounts is perfectly simple and readily understood, it is admirably calculated to secure the cadet from all imposition, and conduces to the strictest economy in his expenses, since he is constantly reminded, by a reference to his check-book, of the extent of his income and the objects to which prudence requires he should appropriate it; and, besides this, it gives to the cadet the habit of keeping accounts of his expenses, so essential to secure a high character in the profession for which he is destined, or in the discharge of the various honorable employments in civil life, for which he is so well fitted by the education he receives at the Military Academy.

This habit of economy, which so much depends upon a habitual attention to accounts, teaches that prudence in affairs without which all other attainments are obscured or rendered wholly useless, and

without which men are but little suited for the simplicity and salutary equality which is not only taught by, but practically results from, our institutions. And your committee have found on this account much to admire and commend in the fiscal arrangements to regulate the expenses of the cadets.

There can be no better evidence of the attention to economy in the general expenses of the institution on the part of the gentlemen charged with the important duty of administering its concerns than is disclosed by the fact that, independent of the sum of \$16,000, already referred to as unexpended, the accounts for the last four years, terminating on the 1st of January of the current year, show an unexpended balance of \$3,764 87.

It will be perceived that the annual amount expended for the pay of professors, and the pay and subsistence of the cadets, is estimated to average \$93,566 52; to which, if we add the amount of the expenditures for academic purposes, (which, taking the mean of the last four years, may be estimated at about \$23,500, exclusive of the unexpended appropriation for the erection of a chapel and building for exercise,) equal to \$117,166 52, and we have the annual average expenditure of the institution for the last four years. This, too, embraces a large sum which has been expended for the gradual increase of the library, the philosophical apparatus, and mathematical instruments, &c., &c., belonging to the institution, a charge which, as these departments become more perfect, will annually diminish. When it is considered that this national institution assembles from all parts of our extended country the youth of every State in the Union, who here receive instruction from a common *alma mater*, and that *alma mater* their country, and that this is calculated to inspire them with feelings of personal and patriotic affection, connecting more closely the bonds of common union; when it is considered that they carry with them these feelings in the army, where they may become the gallant defenders of that very country, to every part of which they owe so much; when it is considered that at this institution two hundred and fifty cadets are annually taught, and acquire an extraordinary proficiency in the useful and exact sciences, now mainly instrumental in the successful prosecution of the great work of internal improvement to which almost every State in the Union is turning its attention, and in which, should the cadets of the Military Academy be employed, they would so richly repay, independent of every other consideration, the amount expended for their education; when all these things are considered, your committee cannot avoid the conclusion that the amount annually expended for this institution is not only consistent with enlightened economy, but that it is to be regretted that the number of cadets now allowed by law is not greater, so that the benefits of the institution might be more generally extended.

Your committee approve of the policy which prevented the expenditure of the \$16,000 appropriated by Congress for the erection of a chapel and a building for military exercises, so much wanted for the institution. This sum they consider insufficient for the purposes for which it was destined; and they are fully of the opinion that the most salutary economy which the government can exercise on this subject is that which, while it requires the utmost exactness in accounts and contracts, and the greatest prudence in the expenditure of money, admits an expenditure fully sufficient to carry into effect the great design of making this institution worthy of the age and worthy of the country, upon which it is calculated, if properly regulated, to confer so many benefits.

By reference to "the regulations" it will be ascertained that each cadet, upon entering the institution, is required to furnish himself with certain articles of furniture and clothing necessary for his comfort and health. The amount which he is thus required to expend upon entering the institution is about \$75. Your committee have ascertained that very many cadets do not bring with them when they come to the institution money for this purpose. In such case the cadet is forced to contract debts, in anticipation of his pay, to an amount which must occasion him much embarrassment and difficulty; and, besides, should he be so unfortunate as not to pass at the January examination, he is without the means of returning to his place of residence.

It is much to be regretted that parents and guardians should not more generally attend to this. Your committee think it right to bring the subject to the view of the board, so that it may, if the board should consider it proper, be made the foundation of a recommendation to the War Department that each parent or guardian of a cadet, who is previously appointed, should be informed of the importance of sending, for his son or ward, to the superintendent, a sum sufficient to meet the expenditure referred to. Perhaps it would be always best to send this money directly to the superintendent, so as to avoid any improvidence on the part of the cadet.

Among the inquiries which engaged the attention of the committee were the personal expenses of the cadets, with a view to consider whether some reduction in them could not be effected. The committee were satisfied that the amount now appropriated for the pay and subsistence of the cadet is barely sufficient to maintain him. There is no item of expense incurred by the cadet in which it appears a reduction could be made, unless it should be in the item of board, which is charged to the cadet at \$10 per month. Comparing this with the expense of boarding in other literary and scientific institutions in our country, the committee have been induced to suggest the inquiry whether the charge for board might not be reduced without injustice to any one.

CHARLES B. PENROSE, *Chairman of Committee.*

No. 4.

REPORT FROM THE TOPOGRAPHICAL BUREAU.

TOPOGRAPHICAL BUREAU, October 30, 1834.

SIR: In obedience to your instructions of the 15th of August last, I have the honor to submit to you a statement, marked A, exhibiting the amount drawn from the Treasury Department and remitted to the disbursing officers under the bureau from the 1st of October, 1833, to the 30th of September, 1834, inclusive, and also the amount of accounts rendered.

The topographical and civil engineers have been employed upon, and the funds appropriated for surveys for the year 1834 have been applied to, the following objects:

1. Surveying the cast pass into the Apalachicola bay and river, to ascertain the practicability and cost of removing obstructions and improving the harbor.
2. Surveying the Cumberland river, with a view to its improvement.

3. Survey of a canal route from the Cape Fear river, through Waccamaw lake, to Waccamaw river, North Carolina.
4. Survey of the Delaware river from Newcastle to Port Penn, and a survey of the Pea Patch island.
5. Reconnoissance of a route for a railroad from Memphis, Tennessee, to the Atlantic ocean.
6. Geological and mineralogical surveys and researches in the Territory of Arkansas.
7. Surveying a route for a railroad across the isthmus of Michigan.
8. Survey of the southern shore of Lake Huron, and of the eastern shore of Lake Michigan, in the Territory of Michigan.
9. Survey for ascertaining the propriety of granting the right of way at Harper's Ferry to the Winchester and Harper's Ferry Railroad Company, in pursuance of a joint resolution of Congress at its last session.
10. Reconnoissance for the route of a military road on the frontiers of the State of Maine.
11. The survey of the Susquehanna (with a view to a canal connexion between the Chesapeake and the lakes) was commenced, but suspended on account of the death of the engineer.
12. Survey of a route for a road from the Alabama line, by way of Mariana, to Apalachicola bay.
13. Survey at Newburyport harbor, with a view of ascertaining the damage sustained by a bridge by the erection of the public works at the mouth of the Merrimack river.
14. The survey of the St. Francis river, commenced last year and suspended on account of the high stage of water, was not recommenced this season on account of not having at the disposal of the bureau an engineer to assign to that duty.
15. The survey of the route for a road from Tallahassee to Cape Florida, under the act approved June 30, 1834, was not commenced on account of the inadequacy of the appropriation to carry the object of the act into effect.
16. A survey of a route for a road from Chicago, on Lake Michigan, to Fort Howard, on Green bay.
17. A survey of Provincetown harbor, with the view to the erection of fortifications.
18. In completing the report and drawings of a survey of a canal from Connecticut river to Lake Winnipiseogee, New Hampshire, by the way of the Oliverian and Baker's rivers.
19. In completing the drawings of a canal route to unite the waters of Lake Champlain with those of the Connecticut river.
20. In completing the drawings of a survey of Georgetown harbor, South Carolina, for military defences.
21. In completing the drawings of the reconnoissance of the sounds of North Carolina, for military defences.
22. In making a report and estimate for the construction of a canal from Akron, in Ohio, to Beaver, in Pennsylvania.
23. Examination of the Brandywine shoal, Delaware bay, for the erection of a light-house.
24. In superintending the construction of the Potomac bridge.
25. In superintending the construction of the aqueduct across the Potomac river
26. In paying the salaries of the civil engineers and agents employed on several of the foregoing items of duties.

Since the submission of the last annual report the following surveys for military and civil purposes have been completed, and several of the reports in relation to the same have been submitted to Congress:

1. Report of a survey between the waters of St. Andrew's bay and the river and bay of Chhattahoochee, and between Pensacola bay and Bon Secour, along the northern coast of the Gulf of Mexico, with a view to ascertain the practicability and cost of canals to connect said bays and rivers, under the act of Congress of July 4, 1832.
2. A survey of the route for a road in the Territory of Arkansas from a point opposite to Memphis to the house of William Strong, or some other point on the St. Francis river, under the act of March 2, 1833.
3. A survey of Portland harbor, Maine, with a view to the erection of a breakwater.
4. A survey of Throg's Point, New York, with a view to the erection of fortifications for the defence of the city of New York.
5. A survey of Burlington bay, Vermont, and Port Kent and Plattsburg harbors, New York, with a view to their improvement.
6. A survey of Vermilion river, with a view to its improvement.
7. A survey between the Pearl and Yazoo rivers, Mississippi, with a view to their connexion by a railroad or canal; also a survey of the "Yazoo Pass," in the same State.
8. A survey of the mouth of Chagrin river, Ohio, with a view to its improvement.
9. A survey of the Potomac river from Georgetown to Alexandria, District of Columbia, with a view to its improvement.
10. The report and maps of the Taunton and Weymouth canal, Massachusetts.
11. The drawings of a survey in order to ascertain the military defences of St. Mary's river, Maryland.
12. The surveys, reports, and estimates of a route for a railroad from Mad river to Lake Erie, in the State of Ohio.
13. The reports and drawings of the survey for a route for a railroad from Williamsport, Pennsylvania, to Elmira, New York.
14. A survey of the Monongahela river, with a view to its improvement.

The duty of carrying into effect the provisions of the appropriation which refer to geological and mineralogical investigations has been consigned to G. W. Featherstonhaugh, esq., who is now engaged upon it.

His report has not yet been received, but his known talents and industry, as well as the various letters which have been received from him, afford the most solid grounds for anticipating that it will be executed in a manner highly creditable to himself and to the government with which it originated.

It is not merely those questions of abstract science which are involved in his observations; it is not merely the additional light which will be thrown by his researches upon various subjects which now agitate and occupy the learned of all the world, which are to give interest to this duty, and which will place its patrons in the attitude of the enlightened and liberal friends of scientific truths; but it is the development of immense and hitherto unknown sources of wealth and of active inland trade; the exposing of the various deposits of coal, iron, lead, and of the precious metals, and the encouragement these will furnish to industry and the profitable employment of capital.

The application of steam to the propelling of boats has thrown, as it were, the western world upon

the borders of the ocean, and has given to the immense agricultural resources of that vast region a degree of activity and of value which if any one had predicted twenty years since he would have been classed among the wildest of visionaries. Now, if to these resources we add those of its mineral treasures, which the researches now being made will develop, may we not reasonably expect a proportionate increase in the extent and value of the results?

The joint resolution of Congress authorizing the President to cede to the Winchester and Harper's Ferry Railroad Company a right of way over the public grounds at Harper's Ferry being committed to this bureau in order to ascertain the facts involved in the exercise of the grant of power, Colonel Kearney and Captain Turnbull were ordered to survey and report in the case. The result of their investigation will be found appended to this report.

The facts exhibited rather indicate the necessity of additional legislation before the grant is consummated.

Having gone through with the exposition of the duties under the direction of this bureau, it becomes my duty, from an imperious sense of its necessity, again to call your attention to the reorganization and enlargement of the corps of topographical engineers. The defects of the present system not only expose this branch of service to serious errors, and to the most inefficient execution of the duties consigned to it, but violate true principles of economy, by producing a minimum of results at a maximum of expense.

I should feel justly obnoxious to reproof if I had not so frequently brought this subject to your consideration, as well in its general aspect as in its most minute details; and should also doubt the correctness of my views, from the failure of success which has so long attended them, if they had not so frequently met with your approbation and the support of your recommendation, as well as the favorable consideration of the Executive.

The corps now consists of six field officers and four captains. The modifications proposed would retain the same number of field officers; altering and increasing the rank of two, would add six to the number of captains, and that proportion of first and second lieutenants which would harmonize with other organizations, and meet the demands for topographical service.

These additions to the corps to be made by transfers and appointments from the army. The scientific and military knowledge absolutely necessary to such a corps, is (with rare exceptions) alone to be found among the graduates from the Military Academy. These now pervade every branch of the army; numbers of them have already acquired much practical knowledge by employment on these duties, thereby furnishing the means of completing the organization proposed, with the best materials and without delay. And if so organized, it would be the fault of him who might command it, if it were not in time to prove itself one of the most efficient and one of the most useful arms of the service.

Respectfully submitted.

JOHN J. ABERT, *Lieutenant Colonel, Top. Eng.*

HON. LEWIS CASS, *Secretary of War.*

A.

Statement showing the amount of money drawn from the treasury and remitted to the officers and agents disbursing under the Topographical bureau from the 1st October, 1833, to the 30th of September, 1834, inclusive; and the amount of accounts rendered by each within the same period.

Names.	On what account.	Amount remitted.	Am't of accounts rendered.

TOPOGRAPHICAL BUREAU, *October 23, 1834.*

SIR: I have the honor to lay before you the report of Lieutenant Colonel Kearney and Captain Turnbull, of the corps of topographical engineers, in reference to a resolution of Congress passed during its last session, authorizing the President to grant, under certain conditions, a right of way to the Winchester and Harper's Ferry Railroad Company over the public land at Harper's Ferry.

The report, 1st, describes the ground and the improvements which would be interfered with.

2d. It states the conditions which ought to be exacted in case the grant is made.

3d. It alludes to the power to make the grant under the limitation which appears to be placed upon that power in the resolution, and the circumstances which were found to exist.

Upon the last question the whole subject may be considered to depend; but as its interpretation properly belongs to authority higher than this bureau, it is respectfully submitted to your better judgment, with all the papers involved in its consideration.

I have the honor to be, sir, very respectfully, your obedient servant,

J. J. ABERT, *Lieutenant Colonel, Top. Eng.*

Hon. LEWIS CASS, *Secretary of War.*

WASHINGTON CITY, *October 7, 1834.*

Sir: Agreeably to your orders we have examined the ground on which the Winchester and Potomac Railroad Company propose to locate their road and depots at and near Harper's Ferry, as well as the effect of that location upon the property and interests of the United States, and we have the honor to report:

That the company intend, on leaving the main land near Strider's island, that the road shall traverse the islands which border the northern shore of the Shenandoah river, viz: Strider's, Throop's, Hall's, and Virginius islands, whence it will reach the narrow plains at Harper's Ferry, about forty-three yards above the foot-bridge at the lower end of the island. Upon one of these islands are the works erected by the United States for the manufacture of rifles; and on the main land, near the ferry, are the arsenals for the storage of arms, and many of the houses, offices, and other buildings, intended for the accommodation of the officers and workmen in the employ of the government.

Covered as the ground at the ferry is with houses, gardens, and fences, and crossed by streets and lanes, it would be difficult, if not impracticable, to construct a road of double tracks without interfering with some interest or convenience, and it would be equally difficult to avoid all improved property. The route which the company has traced is, in fact, almost altogether on improved property, on which are several houses, as the maps accompanying this report, and the statement marked F, will show.

We are of opinion, nevertheless, that it is liable to fewer objections on the part of the United States than any other route that the company could have selected on the public lands.

The company call for a breadth of thirty feet for their road in its passage over the islands, and to the eastward of the street or alley on which the Globe inn is situated. From this point (say thirty-four feet east of that street) to the eastern boundary of the United States property the company propose to increase the width of the ground on which their road is to be constructed to fifty feet, to enable them to lay four tracks.

The parallel lines (traced and shaded in red lake) upon the maps hereto annexed, and marked A, B, and C, exhibit the location of the road, which covers about 7,000 square yards of public land.

We are of opinion that a breadth of thirty feet is not more than will be necessary for a double track elevated above the natural surface of the ground; and the connexion of the road with that of the Baltimore and Ohio Company, which has a peculiar width between the rails, renders four tracks indispensable at the place where they unite with each other.

As a place of deposit, and for the general accommodation of the trade, the company ask for the ground lying south of their road and east of the paymaster's dwelling. This is also colored in red lake upon the maps, (marked A and B,) and contains about 2,900 square yards. It includes part of the paymaster's garden and a small house of little value, and it extends to the river shore.

This ground will probably be scarcely sufficient for the purposes for which the company intend it. The privilege of wharfing in front of it would enable the company to communicate directly with the river trade and enlarge their limits. Should the United States be disposed to grant more space than is here indicated, the grant ought to be confined to the ground lying between the railroad and the Shenandoah river, and east of the lane on which the Globe inn is situated.

Between the railroad and Shenandoah street, and to the east of the Globe inn, the United States has no more ground than is required for the establishments which it has formed there. It is through this ground, nevertheless, that the company wish to open a communication between the railroad and Shenandoah street, and they propose to erect a warehouse immediately north of and in connexion with the road, for the benefit of the trade of Harper's Ferry and its neighborhood, and for the general accommodation of passengers.

The company have chosen two modes, by either of which it would be willing to effect this object; that is, directly by the space lying between the arsenal and the master armorer's, and colored in red lake on map A, or otherwise through the Globe Inn lane, and thence between the northern rails and the red dotted lines shown upon the same map.

As it is intended to lay the rails along this part of the line at such a height that their surface will be nowhere less than ten feet above the natural surface of the ground, and as the ground can be easily graded to fourteen feet below the rails, they can be established on trestles or frames, or upon piers, so as to leave sufficient room under them for all purposes of transportation or intercourse between the depots south of the road and the Globe Inn alley, and thence to Shenandoah street.

Inasmuch as the ground which the company require for a depot on the southern side of their road necessarily approaches the paymaster's dwelling rather nearer than is supposed to be consistent with his comfort and convenience, or the safety of his property, and as the buildings which the United States have upon that lot are very conveniently situated for the purpose, and would be useful to the company for the accommodation of their officers and attendants at the depot, it is suggested whether it would not be to the mutual advantage of the parties to yield this lot and its improvements to the company for a fair price. We learn that there is an unexpended appropriation for enlarging the paymaster's establishment. Should it be considered advisable to locate him elsewhere, (on the hill, for example,) there could not be a fairer opportunity, nor one more in accordance with the interests of all parties, than the one now presented.

Should the President of the United States resolve to convey to the company the right of way over the public land, we conceive it to be our duty respectfully to suggest that, among others, the following conditions and restrictions ought to be embraced in the act of conveyance, viz:

Restraining the company from diminishing the watercourses by which the works on the Shenandoah are supplied with water; from impeding the free passage of the water through them; from diminishing the height, length, breadth, or strength of the embankments which now are or may be hereafter erected to protect the works or property against freshets or backwater; the like restrictions as to waste-weirs,

sluices, dams, &c.; from interrupting or reducing the water communication between these channels and the river; from impeding or injuring the navigation of the rivers near the United States property; from preventing or impeding the erection of any dam or other work that the United States may propose to erect upon the Shenandoah, reserving to the United States to add to, enlarge, diminish, or otherwise alter or change such channels, sluices, waste-weirs, dams, embankments, or other works, as now are or hereafter may be deemed necessary or convenient.

Further, we think that the company ought to be restrained from embanking any part of the ground over which their road is to be constructed near the public land without the express permission hereafter of the United States. The rails ought, therefore, to be supported, wherever they are elevated above the natural surface, upon frames or trestles, or upon piers or viaducts, so as to leave free and unimpeded, as far as practicable, the communication between the ground lying north of the road and that which lies next to the river, so that the passage across or under the road may always be free and open to the United States and to the public, so far, at least, as may consist with the safety of the property of the company; and, for this purpose, the surface of the rails ought not to be less than ten feet above the ground anywhere at Harper's Ferry, nor less than fourteen feet above the ground at and east of the Globe Inn alley.

This freedom of communication, so far as it relates to the ground on which the company's depot is to be situated, might be limited to the property of the United States, and to the officers and persons in their employment; and with that limitation might be connected a right to land stores and other property at the wharves and upon the grounds of the company at Harper's Ferry, and to transport them over the said grounds by the most direct and convenient routes, free of charge for wharfage, damage, or use of grounds. The company should be also restrained from obstructing the streets across which their road may be carried, and from interrupting the drainage of the ground north of it. It ought to be held to erect and maintain sufficient fences between its property and that of the United States wherever and whenever required. It ought to remove, at its proper cost, such houses, sheds, &c., as may fall within the limits conveyed to it, to such places as they may be reasonably required to remove them to, and to restore them in as good condition to their owners as they were in immediately before their removal; or (at the option of the owners) it should pay for them at a fair valuation. It ought also to be obligatory upon the company to use every precaution against fire, and to repair any damage or loss that the United States property may sustain in consequence of the proximity of the company's works to the same.

Whether there exists sufficient authority to make arrangements and conditions such as we have suggested, or whether any conveyance of the right of way over the property of the United States at Harper's Ferry at or near the line of location laid down on the accompanying maps, or on any other practicable line, can be made consistently with the provisions of the joint resolution, a copy of which accompanies this report, and especially whether such conveyance may be made consistently with the clause which requires that the ground to be conveyed shall be "at present not improved," we do not conceive to be within the sphere of our duty to inquire. It is for others to determine whether the authority to do so be sufficient or not. Our duty is confined to the simple statement of the facts which we have collected, and the restrictions and conditions which occur to us as being worthy of the President's consideration. If there are any other than those we have stated, they have escaped our attention, or have not appeared sufficiently important to be noted.

Very respectfully, we are, sir, your obedient servants,

JAMES KEARNEY, *Lieut. Col., and Top. Eng.*

WM. TURNBULL, *Captain, and Ass't Top. Eng.*

Lieut. Col. J. J. ABERT, *Topographical Bureau.*

F.

Explanation of maps accompanying the foregoing report.

At the eastern termination of the government land a high stone wall is erected, immediately on the line between the United States and Wager's.

No. 1, carriage-house of superintendent, value \$40; can be removed.

No. 2, carriage-house and stable of paymaster, value \$50; can be removed.

No. 3, carriage-house and stable of master armorer, value \$150; can be removed.

No. 4, dwelling, belonging in part to the United States, and the balance to George S. Butler—say, United States \$100, Butler \$140, as ascertained by appraisers. This building *cannot* be removed.

The other buildings laid down on the map in the line of the railroad are frame smoke-houses, privies, and sheds, of but little value, and can be removed with but little expense. The ground occupied by a kitchen attached to the paymaster's quarters is required for a part of the depot. This building is of frame, of little value, and also easily removed.

It may not be improper to remark that the fencing of the lots will be much increased by the opening of the contemplated railroad. It will also be necessary to secure a free passage along the streets extending from Shenandoah street to the river; that is, that the rails should be sufficiently elevated for the passage of wagons under them.

August 12, 1834.

No. 5

REPORT OF THE PAYMASTER GENERAL.

PAYMASTER GENERAL'S OFFICE, *Washington City, November 27, 1834.*

SIR: Enclosed herewith I have the honor to present a report of the transactions of the pay department for the fiscal year ending the 30th of September, 1834.

The unexpended funds in the hands of paymasters on the 1st day of October, 1833, and the sums advanced to them from the treasury between that time and the last day of September, 1834, amount to

one million six hundred and six thousand five hundred and sixty-two dollars and fifty-seven cents, all of which have been accounted for except fifty thousand nine hundred and twelve dollars and seven cents. I am daily expecting to receive vouchers for the disbursement of upwards of thirty thousand dollars of this balance; the remainder is charged to late Paymaster Phillips, who informs me that it will be paid over to the Treasurer as soon as his accounts are settled and he has received the credits he is entitled to. This I do not doubt, and am also confident that the government will not lose one cent by the transactions of the department for the last year.

As soon as the appropriations for the army were made Paymaster Stewart was despatched to Fort Gibson with sufficient funds for all the troops at that station, including the dragoons, with the hope that he would arrive before the latter left the post on their late tour of duty. This was impracticable, and the paymaster had to await the return of the regiment to the post. Unfortunately the muster-rolls of some of the companies were sent to Fort Leavenworth; in consequence of which he could only pay the officers of the regiment and the companies that remained at Fort Gibson. Apprehending that he might not fall in with the other companies, Paymaster Wright was instructed to use every exertion to have them paid immediately after their arrival in his district. He received funds for that purpose on the 10th of October, and intended leaving St. Louis to make the payment without delay. Unfortunately for the department, this valuable officer died on the 9th instant. I have no information that the duty was performed before his death, but from the circumstance of his not reporting to me any impediment in the way, and from his character for energy and zeal, I am of opinion that it was. I have official information of the payment of all the other troops to as late dates as is practicable with the present number of paymasters.

I beg leave, respectfully, to call your attention to the following extract from my report of last year on the state of the department:

"When the military establishment was reduced, in 1821, fourteen paymasters were retained for the army, and one for the engineer corps and West Point. Since then the number of troops has increased seven hundred, the number of posts is one-third more, and the annual disbursements half a million of dollars greater than they were, while the number of paymasters remains the same; and, in addition to the increased duty in paying the army, they are now required to pay all the militia called into service.

"It is not in the power of the department, with the present number of paymasters, to indulge them with furloughs, and great inconvenience is felt if one is prevented by sickness or any other cause from performing his duty.

"Under such circumstances, I earnestly solicit you, sir, to recommend to Congress to provide by law for the appointment of three additional paymasters; also to amend the law requiring paymasters to select clerks from the rank and file of the army, (where suitable qualifications cannot always be found,) and to authorize the appointment of citizens, with salaries not to exceed five hundred dollars per annum."

The situation of the department at this time forcibly illustrates the necessity of increasing the number of its officers, if it is expected the troops will be paid as often as the law contemplates. Owing to the death of two paymasters, and to other circumstances over which the department has no control, there are now four districts without a paymaster. It is impossible for the other officers to pay them without omitting a regular payment to the troops in their own districts. In other branches of the staff when vacancies occur, or when the duties of the officers are suspended, the commanders of the districts or posts can appoint officers to perform the duties until the heads of the departments are informed, who can then make permanent appointments from the line without delay. In this department paymasters must be first appointed by the highest authority, and then furnish bonds, to be approved by the Secretary of War, before they can be assigned to duty. Great delay must necessarily take place, and, in the meantime, no relief can be afforded the vacant districts with the present number of paymasters.

Many other arguments occur to me; I will only trouble you with the following: the regiment of dragoons (recently added to the army) will, from the nature of the duty it has to perform, be subject to frequent change of position, and unless a paymaster can be specially assigned to it, it will be necessary to keep all officers of the department who are liable to be called upon always supplied with sufficient funds to pay the regiment in addition to their districts. The advances to these must therefore be greater than heretofore—much more so than is desirable to the paymaster of the government.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. LEWIS CASS, *Secretary of War.*

No. 6.

REPORT OF THE COMMISSARY GENERAL OF SUBSISTENCE.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE,
Washington, November 15, 1834.

SIR: In compliance with instructions from the Department of War of the 15th of August ultimo, I have the honor to submit a statement of the moneys remitted and charged to contractors and to the disbursing officers of the commissariat in the first, second, and third quarters of the year, together with the balances in possession of the latter on the 31st of December, 1833, amounting to..... \$359,013 74 To which is to be added the amounts due them on the settlement of their accounts..... 1,758 16

Aggregating	360,771 90
The amount accounted for during the same period is	313,153 35
Leaving a balance of	47,618 55
From which is to be deducted this sum, charged to contractors as the difference in the price of provisions purchased to supply deficiencies	\$85 44
Amount expended at Indian treaty grounds, not brought to the credit of the officer, on account of subsistence.....	2,300 86
Amount expended in the quartermaster's department, not credited to the officer, on account of subsistence	1,000 00
Amount due by Lieutenant A. C. Fowler at his decease, and for which his sureties are liable.....	465 06
	3,851 36

Leaving 43,767 19 actually in the hands of the assistant and acting assistant commissaries applicable to the expenditures of the fourth quarter of the year.

Of one hundred and thirty-six officers who have disbursed the public moneys on account of subsistence for the period embraced in this statement the accounts of three only were not received at its completion; one of whom has rendered his account since; one has been absent some time from his station engaged in paying annuities to the Miami, Eel River, and Pottawatomie Indians; and the third has been so seriously indisposed since his return to Fort Gibson with the dragoons that the rendition of his accounts was totally impracticable; it is believed that the reception of these accounts would have reduced the balances about ten thousand dollars; but there is not the smallest doubt that they will reach the office in the course of this month, and that every cent in the hands of the disbursing officers of the department on the 30th of September last will be fully and promptly accounted for in the fourth quarter of the year.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Com. Gen. Subsistence.*

HON. LEWIS CASS, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from January 1 to September 30, 1834; the sums charged to them on account of failures, and the moneys accounted for by them; the balances in the hands of the disbursing officers of the department December 31, 1833; the moneys remitted to them in the first, second, and third quarters of 1834; the sums charged as transfers from one officer to another; sales to officers on the frontier posts; sales of surplus provisions, empty barrels, boxes, &c.; and the amounts accounted for by them for the same period; together with the balances in their possession at the expiration of the third quarter of the year.

GEO. GIBSON, *C. G. S.*OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November 15, 1834.*

No. 7.

REPORT FROM THE ORDNANCE DEPARTMENT.

ORDNANCE OFFICE, *Washington, November 18, 1834.*

Sir: In obedience to your order of the 15th August last, I have the honor to transmit a report of the general result of the proceedings and operations of this department between the 1st of October, 1833, and the 30th September, 1834.

The papers marked A and B present a general view of these concerns during the last-mentioned period, as well in regard to the amounts of the expenditures under the several heads of appropriations as in reference to their objects, and to the various ordnance stations where they have been made.

The first of these (A) shows the whole amount of funds remitted from the treasury to disbursing officers and contractors in this department during the year 1833, to have been \$1, 028, 606 09
That the portion of that sum which was expended and accounted for during the same period amounted to..... 963, 222 79

And that at the close of that year there remained unexpended and in the hands of disbursing officers, the sum of..... 65, 383 30
A balance which, it may be proper to remark, was promptly liquidated by the responsible disbursing officers early in the first quarter of 1834.

Statement B exhibits the total amount of funds remaining in the hands of disbursing officers at the close of the year 1833, and which have been remitted to them and to contractors during the first, second, and third quarters of the year 1834. This amount will be seen to have been \$834, 825 79
And the portion of this sum expended, and for which accounts have been rendered during the same period, will be seen in the same statement to have amounted to 766, 701 36

The unexpended balance exhibited in the same statement as being in the hands of disbursing officers at the close of the third quarter of 1834, having been 67, 824 43

Statement C presents a view of the general result of the operations at the several arsenals and armories of the United States, in the manufacture, repair, and purchase of the principal articles of ordnance, ordnance stores, and building materials. It exhibits the result of these operations to the extent to which they have been completed during the year between the 1st of October, 1833, and the 30th of September, 1834, indicating, among other articles of ordnance and ordnance stores which have been fabricated or procured, the following, viz:

Of artillery, 213 32-pounder cannon, 3 12-pounder and 3 6-pounder cannon, 3 24-pounder and 3 12-pounder howitzers, 10 32-pounder and 6 24-pounder casemate carriages, 6 10-inch mortar beds, and 44 field artillery carriages.

Of small arms manufactured and procured, viz: 26,126 muskets and 2,120 (Hall's) rifles, made at the national armories; and at the private factories, 1,030 carbines, (Hall's,) 300 rifles, (Hall's,) 11,140 muskets, and 2,900 artillery swords.

Of accoutrements for small arms, about 1,440 sets for infantry, 1,050 sets for riflemen, and 1,320 sets for cavalry.

Statement D shows the extent of the operations during the year, between the 1st of October, 1833, and the 30th of September, 1834, which have occurred in procuring ordnance and ordnance stores, under

the act of 1808, for arming and equipping the militia of the States and Territories. This statement presents also a view of the expenditures under the act, which have resulted during the same period in procuring the stores, amounting, for all objects, to \$190,539 36.

It exhibits, among other articles of ordnance stores procured, 26 field-carriages, with their equipments complete; 11,140 muskets, 300 (Hall's) rifles, 2,900 artillery swords, 1,200 sets of infantry accoutrements, 800 sets of rifle accoutrements, 1,950 sabre and sword belts, and 1,141 (pair) holsters.

Statement E exhibits the amount of ordnance and ordnance stores, valued in muskets, which have been apportioned for the year 1833, to the several States and Territories, under the act of 1808, for arming and equipping the militia. This apportionment being founded on the recent returns of the strength of the militia, as made by the adjutant general of the militia of the several States, to the adjutant general of the army.

Statement F shows the several articles of ordnance and ordnance stores which have been distributed to the militia of the States and Territories during the year, between the 1st of October, 1833, and the 30th of September, 1834.

Statement G presents a view of the munitions of war issued by this department during the year, between the 1st of October, 1833, and the 30th of September, 1834, to the army. In this it will appear that 4 24-pounder cannon and carriages, 5 10-inch mortars, with their beds, 17 field cannon, with their carriages complete, 750 pistols, 750 carbines complete, 750 sets of accoutrements for the dragoons, 750 sabres, 695 swords, and 204 sets of infantry accoutrements, are among the principal articles issued.

Statement H exhibits the operations of the lead mines for the year ending the 30th September, 1834; and statement I, the amount of lead made at these mines in each year, from the year 1821 to the 30th of September, 1834.

By these statements it will appear that the lead made during the present year amounts	
to	7, 971, 579 pounds.
Excess over the last year	29, 787 "
Total amount of lead made from 1821 to September 30, 1834	71, 817, 319 "
Total amount of rent lead accruing for the above period	5, 699, 631 "
Amount of rent lead due the United States September 30, 1834, yet to be collected.	322, 802 "

The mining operations have been successfully continued on the west bank of the Mississippi, in the country ceded to the United States by the Sac and Fox Indians, and should not the recent sales of lands in the mineral regions, and the locations made for the Indians there, materially interfere with the interests and operations of the mining establishments, the product of these mines may reasonably be expected to be greatly increased hereafter.

I take pleasure in being able to state that the most satisfactory results have been attained this year in the manufacturing operations at the national armories, and at the various arsenals of construction and repairs throughout the country.

The due execution of a just system of accountability for the immense material of war in the arsenals and magazines of the Union, and in the hands of the army, and the continual application of the most improved means of preservation to this material, have enabled the concerns of this department to attain an unusual degree of perfection. It is confidently expected that they will be still more benefited by the salutary operations of the new ordnance regulations adopted by the President on the 1st of May, 1834, but which could not be published to the army until the 19th of September last.

As regards the building operations progressing in this department at the St. Louis, Mount Vernon, Appalachian, and Detroit arsenals, and at the New York depot, I have the honor to state that they have proceeded to the extent of the last annual appropriations for those objects, and have been conducted in the most efficient and satisfactory manner by the several superintending officers.

I have the honor to be, sir, respectfully, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*

Hon. LEWIS CASS, *Secretary of War.*

No. 8.

REPORT OF THE SURGEON GENERAL.

SURGEON GENERAL'S OFFICE, *November 20, 1834.*

SIR: In compliance with the instructions of the department of the 15th of August, I have to report that there has been transmitted to the acting apothecary at New York during the three first quarters of the current year \$9,600, and that the amount for which accounts have been rendered for settlement by him during that period is \$8,918 26. The whole amount of accounts rendered for settlement during this period was \$25,369 56; of which \$10,564 67 were for the payment of private physicians, and \$14,804 89 for medical supplies.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. LEWIS CASS, *Secretary of War.*

No. 9.

REPORT OF THE COMMISSARY GENERAL OF PURCHASES.

COMMISSARY GENERAL'S OFFICE, *Philadelphia, October 28, 1834.*

SIR: In obedience to instructions communicated in a letter dated on the 18th of October, from the Acting Secretary of War, I have prepared, and have now the honor of enclosing, my moneyed estimate for 1835, marked A and B, as follows, viz:

A. For clothing, camp equipage, &c., for one year, ending 31st October, 1836.....	\$162, 387 85
B. For the expenses of the Commissary General's office during the year 1835.....	7, 050 00
Total.....	169, 437 85

I likewise enclose six statements, Nos. 1, 2, 3, 4, 5, and 6, prepared by order of the War Department, viz:

No. 1. Of moneys drawn from the appropriation for the purchasing department during the first three quarters of the year 1834.

No. 2. Of moneys received and disbursed during the first three quarters of the year 1834 on account of the purchasing department.

No. 3. Of moneys received and disbursed during the first three quarters of the year 1834 on account of the "regiment United States dragoons."

No. 4. Of moneys received and disbursed during the first three quarters of the year 1834 on account of "contingencies War Department."

No. 5. Comparative statement of the cost of clothing, &c., for the army of the United States during the years 1833, 1834, and 1835.

No. 6. Statement of the cost of clothing, &c., for the army of the United States during the year 1835.

I have deducted \$50,000 from the gross amount of the moneyed estimate A, for clothing, &c., that may remain on hand after the issues for this year have been completed, which is as much as can be deducted with any degree of safety. I presume these statements will be entirely satisfactory.

The balance of the appropriation for the year 1834 remaining undrawn, \$33,442 40, will be required to enable me to settle all accounts to the end of the year 1834, and to enable me to make up clothing during the winter of 1834-35, to be ready for early issue. I have therefore to request that this money may be reserved for the operations of the Commissary General's department, as my calculations in forming the moneyed estimate are founded on that expectation.

I have the honor to be, sir, with great respect, your most obedient servant,

C. IRVINE, *Commissary General of Purchases.*

Hon. LEWIS CASS, *Secretary of War.*

P. S.—The duplicates required are also enclosed, or will be sent by to-morrow's mail.

COMMISSARY GENERAL'S OFFICE, Philadelphia, October 28, 1834.

C. IRVINE, *Commissary General of Purchases.*

Hon. LEWIS CASS, *Secretary of War.*

No. 10.

REPORT FROM THE CLOTHING BUREAU.

CLOTHING BUREAU, Washington, November 28, 1834.

Sir: I have the honor to report that the clothing and equipage for the army has been procured at prices averaging two and one-half per cent. less than the last year, and have been forwarded to the several military posts in good season.

The clothing furnished for the army for this and the past year is of superior quality to any which has been supplied within the last twenty years; and, as far as information has reached this bureau, gives general satisfaction.

The commissary general of purchases has invited proposals for the supply of clothing and equipage for the ensuing year at a much earlier date than usual, and has allowed greater time for the fulfilment of contracts, thus opening a wider field for competition, which will undoubtedly have the effect still further to reduce the cost of supplies.

The issue of the old pattern clothing, in obedience to an order from the War Department, dated July 23, 1834, has had the effect to leave in the hands of company officers a partial supply of the new uniform, and in the possession of the commissary general of purchases a large supply of clothing materials, applicable to the issues of the ensuing year. Previously to the date of the order referred to, a portion of the old pattern clothing had been sold, and the amount, \$3,378 64, placed to the credit of the surplus fund.

Most respectfully, sir, your obedient servant,

JNO. GARLAND, *Major United States Army.*

Hon. LEWIS CASS, *Secretary of War.*

23D CONGRESS.]

No. 586.

[2D SESSION.]

ON GRANTING TO A RAILROAD COMPANY THE RIGHT OF WAY OVER THE GROUNDS OF THE ARMORY AT HARPER'S FERRY, VIRGINIA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 12, 1834.

Mr. THOMSON, of Ohio, from the Committee on Military Affairs, to whom was referred the resolution of the House of Representatives of the 9th instant, embracing so much of the report of the Secretary of War as relates to the joint resolution, of Congress, passed at the last session, providing for the construction of a railroad through the public grounds at Harper's Ferry, reported:

That the committee have examined the subject referred to them, and find that the Winchester and Potomac Railroad Company could not make the contemplated railroad without passing through the ground belonging to the United States, which had some small improvements erected thereon, and which, on an examination made by officers appointed by the proper authority for that purpose, may amount to about \$480; there are some other buildings on the line of the railroad, as now located, such as smoke-houses, sheds, &c., of little value, which can be removed with but little expense. The committee being of opinion that the completing of the Winchester and Potomac railroad, and forming a junction with the Baltimore and Ohio railroad at Harper's Ferry, is an affair in which the public feel a great interest, and that it is an undertaking which deserves every fair encouragement, recommend the passage of the accompanying joint resolution, as amendatory to the one passed at the last session.—(See antecedent document No. 581.)

23D CONGRESS.]

No. 587.

[2D SESSION.]

ON INCREASING THE NUMBER OF PAYMASTERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 16, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred so much of the President's message as relates to the report of the Secretary of War, and the public interest intrusted to the War Department, having had such of the documents accompanying the report of the Secretary of War as relate to the Pay department under consideration, reported:

That it appears, from the statement of the paymaster general, that when the military establishment was reduced in 1821, fourteen paymasters were retained, and were not more than sufficient to pay the army, as then organized and stationed, as often as the law requires. That, since the passage of the act of 1821, seven hundred additional troops have been added to the army; the military posts are more numerous and extended, and the disbursements of the Pay department increased half a million of dollars. That, at the time the law provided for fourteen paymasters, they were only required and expected to pay the regular troops, but, by a subsequent act, it is now made their duty to pay all the militia called into service; and that, in consequence of the great duty imposed on paymasters, it is impracticable for the present number to pay the troops as frequently as the law, the necessity of the troops, and the interest of the service require.

The committee have ascertained from the Secretary of War that he concurs fully in the statement and opinion of the paymaster general, and recommends that provision be made by law for the appointment of three additional paymasters, and that paymasters be authorized to employ citizens as clerks, with salaries not to exceed five hundred dollars per annum, when suitable non-commissioned officers or soldiers cannot be obtained from the line of the army.

After maturely considering the subject, the committee are of opinion that, under the present organization of the Pay department, it is impracticable to have the troops paid as frequently as the good of the service or the law requires, and report a bill to amend it.

No. 588.

[2D SESSION.]

ON INCREASING THE NUMBER OF OFFICERS OF THE CORPS OF ENGINEERS OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 16, 1834.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, to whom was referred that part of the President's message relating to an increase of the corps of engineers, reported:

That, having given the subject due consideration, they recommend to the House a concurrence in the suggestions of the President and Secretary of War. This useful corps of officers was established on its present footing, as to numbers, more than twenty years ago, just at the commencement of a war, a time when its organization as a military corps for service in the field was, no doubt, chiefly regarded; and when the extended calls for its services, even in a strictly military character, in preparing the permanent means of defence of our frontiers, although they may have been in some measure anticipated, could not have influenced the government in establishing, at that time, the number of its officers. Hence, as might have been expected, that force of the corps, as then arranged, has been found quite inadequate to the discharge of the numerous duties which have devolved on it; and as the evils incident on this state of things increase with time, the committee are of opinion that no further delay should occur in applying the only remedy which the case admits of. The evils here alluded to have been repeatedly set forth in the executive communications to Congress, and the necessity of removing them often urged from the same quarter. It is therefore only necessary for the committee to recall, in a general way, the attention of the House to this subject.

The principal military duties which by law and usage devolve on the corps of engineers in time of peace relate to the construction and preservation of permanent fortifications, and to the care of the Military Academy. An examination of the subject has satisfied the committee that the corps, in its present force, is insufficient even for the discharge of the services required of them under the first of these heads alone, as their numbers would scarcely admit, without any allowance for casualties, of placing one officer at each post; this will be seen by a reference to the chief engineer's report at the commencement of the present session.

By the laws of 1802 and 1812 the corps of engineers constitutes the Military Academy, and its officers are therefore, in strictness, responsible under the law for the government and improvement of that institution on which, at present, the character of the whole military establishment greatly depends; but such have been, and are, the demands for their services in other places that, to meet this responsibility, it has not been possible for many years to devote to this important object the services of more than one or two junior officers in addition to the superintendent; in consequence of which, also, is the neglect of the object contemplated by the institution of the academy, that of allowing to the officers of engineers opportunities of improving themselves in the knowledge of a profession, a perfect acquaintance with which requires constant study and reflection.

But whilst the number of officers is inadequate, as has been shown, to the proper discharge of their

military duties, the measures of the general government in relation to national internal improvements have created a class of new and most important duties, most of which, for the want of an organized corps of civil engineers, fall to the lot of the same body of officers, the laws having, in some of the most important cases, assigned the charge of such works to officers of the corps of engineers. The chief engineer's report of this year contains a list of fifty-six works of this character, the execution of which, involving an expenditure, during the year, of nearly one million and a half of dollars, has been assigned to the Engineer department. The committee conceive that the statement of this fact alone is sufficient to show that the President's recommendation of an increase of this corps is sustained by a regard to the interests of the country generally, and by the considerations of justice to a body of officers who are held responsible for the performance of services which it is impossible for them to render.

In view of these facts, the committee have inquired into the manner in which these services have been performed for several years past; and the result of their inquiries has tended to strengthen the opinion in favor of increasing the corps of engineers. They find, for example, that, at the close of the last fiscal year, large sums of money, appropriated for works of internal improvement, remained undrawn from the treasury, and the public service was necessarily postponed on account of the difficulty of finding persons to whom the management of works might be safely intrusted; and in the direction of many works, which it was impossible to assign to officers of the corps of engineers, officers temporarily detailed from other arms of service, or, in most cases, persons unconnected with the military establishment, and unaccustomed both to military control and to scientific operations, have been employed; and although, in many instances, especially of works under the direction of officers detailed from the line of the army, favorable testimony is borne as to the manner in which the duties have been discharged, yet it is no disparagement to these officers, or to persons who have not, like them, enjoyed the advantages of a strictly professional education, to assert that such works would be conducted with much greater advantage to the public by men whose stations and duties had been of a nature to add the benefits of experience and reflection to those of a proper education; added to which is the consideration of the greater interest which will always be felt in the discharge of duty by men whose standing and professional reputation depend *solely* on the zeal and ability they may display.

Documents placed on the table of the House during the last and present session support this opinion by showing that, in a short time, the operations on that important work, the national road, which have been placed, in pursuance of law, under the directions of engineer officers, have been retrieved from the disorder into which they were thrown, and the further waste of public money averted; and many members of Congress can, it is believed, bear testimony to the improved results obtained under the new direction—an improvement which may be anticipated in other similar works, should the means be afforded of extending to them a like superintendence.

In another way, also, the committee are satisfied that economy will be consulted by adopting the proposed measure, for the rate of wages to persons temporarily engaged for any service is necessarily much higher than that of salaries paid to those who have a fixed profession and a prospect of gradual advancement.

The committee are of opinion that, notwithstanding the demand for officers of the class in question, more injury than benefit might result from an immediate increase of the corps to the strength proposed to be finally given to it, as it is by application in early life that the science necessary for an accomplished engineer can be best attained; and with a view to the formation of an efficient corps, it is proposed to make the increase gradual, extending it through several years.

The committee therefore recommend to the House the adoption of the accompanying bill, drawn up in accordance with the principles here stated. They refer to document marked A as a part of this report.

A.

Extracts of communications of the Secretaries of War, made to Congress at different periods, in reference to the increase of the corps of engineers, showing the necessity of the recommended increase, and the footing on which it should be placed in regard to pay and emolument. Also a statement of the duties which have devolved on each officer of the corps of engineers during the year 1834.

Extract from a communication from the Secretary of War to the chairman of the Committee on Military Affairs, dated December 24, 1828.

The communication from this department to the chairman of the Committee on Military Affairs of the House of Representatives, dated January 10, 1826, sets forth so fully and clearly the expediency of increasing the number and pay of the officers of the corps of engineers that it is deemed almost unnecessary to say anything further concerning these points; I therefore refer the committee to that communication, which will be found in document No. 26 of the 1st session of the 19th Congress. It may be proper here to remark that the increase in the number of objects, both for fortifications and works of internal improvement, which have been conducted under the direction of the Engineer department since the date of the communication alluded to, calls still more imperiously for an increase in the number of officers of the corps of engineers, in order that all public constructions of the above character may be placed under the superintendence of those who are competent to direct them, and personally responsible to the government for the proper conduct of their operations. And, in addition to the strong reasons set forth in the same communication for increasing the pay of the officers of that corps, it may not be improper to state to the committee that, although the nature of their duties assimilates them to staff officers in point of responsibility and expenses, they not only receive inferior pay to those officers, but are rendered, by the very nature of these duties, ineligible to staff appointments which are held by officers of other arms of the service.

In the second section of the bill reported by the committee, and which accompanied the document above referred to, I would recommend an amendment, the justice of which will immediately occur to the committee; it is to place the captains on the same footing with regard to rations as the other captains of the army under the act of the 2d of March, 1827; the bill, unless so amended, will, in its operation, entitle the lieutenants to receive a greater number of rations than the captains.

I beg also to renew the recommendation heretofore made by this department, that the privilege of franking should be extended to the chief engineer, by which means delays in the despatch of business would be avoided, and the expenses of the Engineer department diminished; as many of its correspondents, through ignorance or inadvertence, address their communications and packets to the chief engineer directly, thereby frequently charging the contingent fund of that department with a heavy postage.

Extract from a communication from the chief engineer to the Secretary of War, dated November 18, 1829.

The establishment of this corps dates from the year 1794, at which time it was, however, connected with the artillery, under the denomination of the "corps of artillerists and engineers." On fixing the peace establishment in 1802, a separate corps, consisting of sixteen officers, was organized, which, having been found insufficient for the service, was increased in 1812 to include six additional officers, making a force of twenty-two, which has constituted the corps up to this time. Whether this number is adequate to the present wants of the service, will appear by a reference to the annual report, in which nearly all the operations enumerated under the heads of fortifications and civil constructions, as well as several of the surveys, are conducted by the officers of the corps of engineers; this will more clearly be seen by an inspection of the accompanying statement, exhibiting the duties in which they were engaged during the past year. This want of officers is not now felt for the first time, but has for several years past been the subject of communications to the Secretary of War, and to the Military Committees of Congress, by both of whom the required increase has been several times recommended, though the subject has never yet been discussed in either branch of the national legislature. A reference to the proceedings of Congress since the 1st session of the 19th Congress, and especially to the Secretary of War's letter to the Military Committee of the 10th of January, 1826, (Doc. No. 153 of the House of Representatives, 1st session 19th Congress,) will show the views which have been entertained on this subject by the War Department, and the progressive increase of duties gives additional force to the arguments then advanced in favor of the proposed measure. The advantage of having these duties performed by officers educated for, and permanently attached to, the corps of engineers, instead of by those temporarily detailed from other corps, or by persons not attached to the military service, engaged under the pressure of the moment, is too obvious to require further illustration.

The organization proposed is that recommended by the Military Committee of the Senate in the bill reported by them last February, a copy of which accompanies this letter. The number of officers to be added is barely sufficient for the discharge of their duties. With regard to the increase of pay, which is also proposed in the bill referred to, the measure is founded on justice and the usage of other services. The duties of engineers in all armies are considered of the highest order of military service, and as such they are specially recognized by our 63d article of war; but in our army alone, I believe, is this acknowledgment unattended with that demonstration of it which leads government to attach a higher emolument to a more elevated branch of service, not with a view of rendering, by pecuniary considerations, that station more desirable, which is, by such acknowledgment, rendered highly so, but with a view to maintain the character of its officers by enabling men of suitable talent and acquirements to continue in the service, without disregarding what is due to themselves. That this remark is not without force, is proved by the fact that within three years the corps has lost, by resignation, four young officers, discouraged by the small prospect of promotion, or by the reflection that years of experience and service would still find them with emoluments even much inferior to those of officers who had entered the army at the same time with them in other corps. These considerations are further strengthened by the circumstances of additional expenses to which they are often exposed from the nature of their duties, and of their exclusion from the emolument attending staff appointments, which are mentioned in the letter above referred to.

The delay and expense which sometimes occur in conducting the correspondence of this department, for want of the franking privilege being extended to its chief, have caused the insertion of the last clause of the bill, which proposes such an extension.

Extract from a communication from the Secretary of War to Hon. A. Stevenson, Speaker of the House of Representatives, dated January 13, 1831.

In obedience to a resolution adopted by the House of Representatives on the 7th instant, calling on the Secretary of War "to inform the House whether any, and if any, what, additions are necessary to be made to the corps of military and topographical engineers, exclusively for military purposes," I have the honor to report:

With regard to the corps of engineers. In my report to the President, accompanying his message to Congress in 1829, I expressed a concurrence in the opinion which has been urged for years past by this department, of the necessity for increasing the number of officers in this corps. The advantages which might result from such an increase, in the construction of fortifications and other works of general improvement, were not lost sight of.

The recommendation, however, had reference mainly to such an organization as it was believed would tend to greater economy and efficiency in the discharge of the military duties of the corps in time of peace.

The necessity of an increase of their number is illustrated by the fact that whilst every officer of the corps is now on duty, and but three of them employed in other than military duties, there are only four of the fortifications under construction, in the direction of which the superintending engineer is assisted by any officer of the corps; the necessity for such assistance in preparing detailed plans, and in superintending their proper execution, must be obvious to any who reflect on the varied and often complicated nature of those works. This deficiency in officers is imperfectly supplied in a few cases by an occasional and temporary detail from other corps of the army, or by the employment of citizens at high rates of compensation.

The number of officers which should be added to the corps will be regulated by considering the number of fortifications that will probably be under construction at any one time, with other duties to which the officers are liable. The table of "works projected," which accompanies the annual report from this department, will show that, in addition to those already commenced, forty-three have been planned for the Atlantic and Gulf of Mexico frontier; besides which, it will be remembered that no defenses are yet projected for the extensive frontier bordering on Canada.

Referring for the present to the works required for the defence of the seaboard alone, we may suppose that about twelve or fourteen of them will be under construction or repair at one and the same time, and the number of officers requisite for their superintendence may be estimated as follows:

On the eastern Atlantic frontier, say one field officer, two captains, and four lieutenants.

Middle Atlantic frontier, one field officer, four captains, and eight lieutenants.

Southern Atlantic frontier, one field officer, two captains, and three lieutenants.

Gulf of Mexico frontier, one field officer, two captains, and four lieutenants.

To which add, at the seat of government, one field officer and one lieutenant.

Military Academy, one field officer, one captain, and two lieutenants.

Board of engineers for fortifications to meet contingencies of the service, one field officer, two captains, and two lieutenants.

Making a total of seven field officers, thirteen captains, and twenty-four lieutenants.

By such an arrangement there would be in each great division of the maritime frontier one field officer, who, besides having the immediate charge of a particular work, could act as a general inspector, and whose experience would enable him, in cases of need, to aid by his advice other officers within his district.

It is in accordance with these views that the project for an increase of the corps, heretofore presented to Congress, has been prepared.

Extract from a communication from the chief engineer to the Secretary of War, dated January 19, 1832.

In compliance with your verbal instructions of yesterday, I have the honor to hand you herewith a statement, marked 1, showing the present distribution of the officers of the corps of engineers; and, as regards the wants of the service, for an increase of their numbers, I beg to refer you to the accompanying paper, marked 2, being a copy of a communication to the House of Representatives on the subject, made in conformity to a call of that House, in which is shown the distribution to be made of them, provided the additional number asked be authorized.

As to the increase of expense by the provisions of the 1st section of the bill reported in the House of Representatives at the last session, a copy of which is also herewith submitted, it will be—

For the first year.....	\$4, 004
For the second year.....	8, 009
For the third year.....	11, 822
For the fourth year.....	15, 635
For the fifth year.....	20, 678
For the sixth year.....	25, 702
For the seventh year, and thereafter.....	32, 700

This calculation is based on the supposition that cavalry pay will be granted; should the present pay be continued, then the increase will amount only to \$19,700.

In either case, it is firmly believed that true economy would result to the government, both in saving a great part of the sums now paid to persons employed in the superintendence of public works, and still more in the more efficient and judicious application of the public funds, which would result from the employment of none but well-instructed and experienced officers, in sufficient numbers to give the proper attention to all the details of construction, which, with the present force, is almost impracticable, and consequently the quality of the workmanship depends more than it should on the intelligence and faithfulness of the mechanics employed.

About \$20,000 a year is now actually paid as compensation to the civil agents superintending public works under this department.

The bill alluded to contemplates giving cavalry pay. The reason for this is, that, as the occupation of the engineer officer usually places him in isolated situations, where the expenses of messing cannot be divided with others, as is the case at all garrisons, it appears proper on that account, as well as others, that he should be better paid. He has to perform many of his duties on horseback, such as searching the country, in the neighborhood of his operations, to obtain materials, workmen, &c.; and as the nature of his profession requires the highest order of military attainment, besides being deprived, by the wants and usage of service, of participating in the benefits of staff appointments, as aides-de-camp, quartermasters, &c., it is but reasonable that he should be compensated, in part, for the loss of these by being designated on the statute-book for the small additional emoluments allowed.

Extract from the annual report of the Secretary of War, dated November 27, 1834.

I beg leave to ask your particular attention to that part of the report of the chief engineer which recommends an addition to the number of the officers of his corps. I believe the public service requires this measure. New duties have been imposed upon the engineer corps by express acts of Congress, while in other cases it has been found necessary, by executive regulation, to require from the officers services not originally contemplated in the organization of the department. The erection of fortifications, the construction of roads, the establishment of fixed points, by astronomical observations, in boundary lines, and the improvement of harbors and rivers, are among the objects committed to the engineer officers. And I feel bound to report to you that, as far as my observation or information has extended,

their duties have been performed in the most satisfactory and exemplary manner. In scientific acquirements, and in their practical application, these officers are deserving of high commendation; and it is very desirable that their numbers should be so far augmented as to insure their personal attention to all the objects within the control of the Engineer department. This cannot now be done, and the public service suffers in consequence of it.

Duties which have devolved on each officer of the corps of engineers, during the year 1834, viz :

Colonel C. Gratiot. Charged with the affairs of the Engineer department, to which was committed the care of the Military Academy, and supervision over the operations for constructing and repairing nineteen fortifications, seventeen roads, the improvement of thirty-nine harbors and rivers, the construction of nine light-houses and beacon lights, all of which have been worked on during the year; and making observations to establish the northern boundary of the State of Ohio.

Lieutenant Colonel J. G. Totten. This officer has personally superintended the operations for the construction of Fort Adams, Rhode Island; he has, as a member of the board of engineers, assisted in projecting plans and estimates for the fortifications at Foster's bank, Pensacola harbor, the Delaware river, Long Island sound, Boston bay, and Provincetown harbor, Cape Cod; and is now engaged in revising the project for improving the navigation of the Hudson river above Hudson. He has also made estimates for removing the light-house at the end of Goat island, and inspected and supervised, in a general way, the harbor improvements on the south shores of Massachusetts bay, Massachusetts and Connecticut.

Major S. Thayer has been charged with the immediate superintendence of the works of defence and harbor improvement in Boston harbor, the inspection and general supervision of the harbor improvements at the mouths of the Kennebec and Merrimack rivers. In addition to these duties, he has assisted, as a member of the board of engineers, in projecting plans and preparing estimates for the works enumerated above.

Major R. E. De Russey has superintended the Military Academy.

Captain J. L. Smith has been charged with the operations for constructing Fort Schuyler, and with those for repairing Castle William, Forts Columbus, Hamilton, and Lafayette, New York harbor.

Captain George Blaney has been engaged in finishing Fort Caswell, and in prosecuting the operations for the improvement of Cape Fear river, North Carolina.

Captain W. H. Chase has superintended the works for the construction of forts at Santa Rosa island and Foster's bank, Pensacola harbor; besides which, he has been charged with the inspection and general supervision of the several river and harbor improvements in Florida, Alabama, and Mississippi.

Captain R. Delafield has superintended the repairs of the Cumberland road east of the Ohio river, the operations for rebuilding Fort Delaware, and those for improving harbors on the Delaware river.

Captain A. Talcott superintended the construction of Forts Monroe and Calhoun till June, when he proceeded to Michigan to make observations for fixing the northern boundary of the State of Ohio. He returned to Hampton Roads in August, when he was relieved from duty there, and appointed the superintendent for improving the navigation of the Hudson, and is now engaged in revising the surveys and plans made for it.

Captain W. A. Eliason was in charge of the works at Charleston harbor, South Carolina, until April, when he was relieved for the recovery of his health, which was very bad, and in November he was put on duty at Fort Calhoun.

1st Lieutenant Thomas Leslie, paymaster to the Military Academy.

1st Lieutenant C. A. Ogden superintended the works for the construction of the fort at Mobile Point, and those for improving Mobile harbor, to their completion. In compliance with the act of the last session, he was transferred from the Gulf station to that of the Cumberland road in Indiana and Illinois, the operations on which he now superintends.

1st Lieutenant H. Brewerton has superintended during the whole year the construction of the Cumberland road in Ohio.

1st Lieutenant S. Tuttle. In arrest since May last.

1st Lieutenant George Dutton, employed on the improvements at Ocracoke inlet and in finishing Fort Macon, North Carolina.

1st Lieutenant Joseph Mansfield has superintended the construction of Fort Pulaski, and the works for improving the Savannah river, Georgia.

2d Lieutenant A. H. Bowman was assigned early in the year to duty at Fort Livingston, Louisiana, from which duty he was withdrawn in the month of July to superintend, under the act of Congress, the construction of the road from opposite Memphis to St. Francis, in Arkansas. To this duty is added that of inspecting the operations for improving the navigation of Red river, Mississippi, Ohio, and Cumberland rivers.

2d Lieutenant T. S. Brown has, since April, superintended the works in Charleston harbor, South Carolina.

2d Lieutenant W. H. C. Bartlett was the assistant in the Engineer department until November, when he received the appointment of professor of natural and experimental philosophy in the Military Academy.

2d Lieutenant R. E. Lee assisted, until November, Captain Talcott in the superintendence of the works at Forts Monroe and Calhoun. He is now the assistant in the Engineer department.

2d Lieutenant A. I. Swift, assistant to Colonel Totten, at Fort Adams.

2d Lieutenant R. Parke, assistant to Colonel Thayer, at Boston.

Brevet 2d Lieutenant F. A. Smith, assistant to Colonel Thayer, at Boston.

Brevet 2d Lieutenant J. G. Barnard, assistant to Captain Smith, at New York.

Brevet 2d Lieutenant G. W. Cullum, assistant to Colonel Totten, at Fort Adams, to the month of November. He is now second assistant in the Engineer department.

Brevet 2d Lieutenant R. King, assistant to Captain Talcott on the works at Hampton Roads; afterwards in establishing the northern boundary of Ohio, and now in improving the Hudson.

Brevet 2d Lieutenant W. Smith, a graduate of last June, assisting Captain Talcott.

Brevet 2d Lieutenant J. Saunders, a graduate of last June, assisting Lieutenant Ogden.

NOTE.—Neither of the eight last-named officers have much professional experience; they are for that reason kept where they can most readily acquire it.

23D CONGRESS.]

No. 589.

[2D SESSION.]

ON THE CLAIM OF COLONEL JOHN EUGENE LEITENSORFER, ON ACCOUNT OF MILITARY SERVICES UNDER GENERAL WILLIAM EATON AGAINST TRIPOLI IN 1805.

COMMUNICATED TO THE SENATE DECEMBER 16, 1834.

Mr. BENTON, from the Committee on Military Affairs, to whom was referred the petition of Colonel John Eugene Leitensdorfer, reported:

That the services and sufferings of the petitioner in the American cause, as set forth in his petition, are well and sufficiently proved by the evidences adduced, and seem to have been amply proven to the Congress of 1811, by which body an act was passed for his relief.

The chief question which the committee have found themselves called upon to decide is as to the sufficiency of the relief then granted; and they are of opinion that it was not sufficient.

The three hundred and twenty acres of land then granted to him, to be located west of the Mississippi, where no land office was opened for seven years afterwards, could be but an inadequate compensation for the risk and trouble of a journey from Grand Cairo to Upper Egypt in search of the exiled bashaw, Hamet Caramalli, of Tripoli; an enterprise in which the petitioner had a double danger to encounter—of death from the Turks, as a deserter to the Mamelukes under Ali Bey, then at war with the Sublime Porte, and death from the Mamelukes, as a spy from the Turks. It also bears no proportion to the value set by the American government on the co-operation, by land, of Hamet, the exiled bashaw, with the squadron of the United States in their maritime attack upon the reigning bashaw in Tripoli. From General Eaton's journal it appears that he advanced the petitioner but fifty dollars when he set out upon his perilous expedition; being most scantily supplied with funds by the American government, and entirely penniless before he had accomplished his enterprise. It is shown that the House of Representatives, in 1811, had proposed to raise the petitioner's compensation of land to 640 acres; and the committee now recommend this to be done, by granting him an additional quantity of 320 acres, as requested in his petition.

For his military services the act of 1811 allowed the petitioner the *pay*, without emoluments, of a captain of infantry, while the act itself, which made the allowance, recognized his true rank of adjutant and inspector general; and General Eaton attests that his rank was that of colonel, and his important services, both in the march from Alexandria to Derne and in the military operations at that place; a rank not to be considered extraordinary in an officer who had served in the finest armies of Austria: had been a colonel of chasseurs at the battle of Marengo; and was chief of the staff and director of artillery to the Turkish army in Egypt when he joined the enterprise of General Eaton, and placed all his hopes of rank and fortune upon the restoration of the true sovereign, Hamet Caramalli, to the throne of Tripoli. The committee, therefore, recommend that he be paid as colonel of cavalry during the seven months that he served, deducting therefrom the amount paid as captain of infantry.

The third item of compensation is the extra pay at the time of discharge. This was not given at all in the act of 1811, though always given in the American service, and fixed at three months' pay, without emoluments, and intended to defray travelling expenses from the place of discharge to the place of residence. It is believed that no case could occur in which the commutation for travelling expenses could be more properly allowed than that of the petitioner. Induced to quit the Turkish service to enter the American; discharged on a foreign shore in the midst of victory; compelled to abandon everything—horses, tents, and baggage, and to go on board a ship at midnight and by stealth—to escape massacre at the hands of those whom he was compelled to desert; a wanderer for four years before he could get to the United States; at one time sold into slavery; at another an enlisted soldier; and arriving at last, destitute and a foreigner, in the United States, which he had fixed upon as his last asylum and home. Under such circumstances the ordinary allowance for travelling expenses would seem to be an obligation of duty upon the government of the United States.

The application for a pension preferred by the petitioner, if the pension system of the United States stood as it did at the close of the late war, would not be favored by this committee; but since so many are receiving pensions who have done so little, no reason can be perceived upon which it should be denied to one who has done and suffered so much.

To complete the view of Colonel Leitensdorfer's case, the committee have to remark that he stands before Congress in a very different point of view now from what he did in 1811. He was then an alien, and might be taken for an adventurer; he is now a citizen of the United States; married to a native American; father of a family; for twenty-two years a cultivator of the ground, near St. Louis; and during all that time an honorable and industrious man.

The committee accordingly report a bill.

To the Senate and House of Representatives of the United States of America:

The petition of John Eugene Leitensdorfer, now and for twenty-two years past an inhabitant of the Territory and now State of Missouri, respectfully shows: That in February, 1811, he presented a petition to the two houses of Congress, which is hereto annexed and made part of this petition, and shows his case up to that time; that in pursuance of that petition the honorable House of Representatives passed a bill to grant him six hundred and forty acres of land and the pay of a captain of foot for seven months; which bill received the sanction of the Senate, except for the totality of the land, which was reduced to one-half; and your petitioner, under the law then passed, received the sum of two hundred and eighty dollars in money and a warrant for three hundred and twenty acres of land, to be located west of the river Mississippi.

In that petition your petitioner stated it to be his intention to become a citizen of the United States and to devote himself to agriculture, a statement which might well be considered at the time as so many

phrases to help out his case. But time has proved that they were not phrases; for the senators and representatives from Missouri now here, General Gratiot, of the engineers, and all St. Louis, if that people were here, might attest that since twenty-two years he is an inhabitant of the village of Carondelet, near St. Louis, married to a native, father of a family, and cultivator of the ground, an orchard, garden, and a vineyard; the fruits of which he sells in the market of St. Louis with the same hands which raised them.

But late years have not been favorable. Severe winters and late frosts have checked the produce of his garden and orchard and killed his bees; and some old wounds begin again, at the age of sixty-four, to be troublesome and to render him less able to work, when increased family and diminished income render work more necessary.

What he now has to propose to your honorable body is this:

1. That the original intention of the honorable the House of Representatives be made good by granting him the remaining half of the six hundred and forty acres of land.
2. That he be allowed pay and emolument according to his actual duties and rank of adjutant and inspector, and colonel; deducting therefrom the pay of captain of foot, which he actually received.
3. That he may be placed on the pension list of the United States.

JOHN EUGENE LEITENSORFER.

WASHINGTON CITY, December 12, 1834.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

The memorial and petition of Eugene de Leitensdorfer respectfully sheweth: That your petitioner is a native of the south part of Tyrol, in Europe, near the borders of Italy.

That, in the year 1804, he was engaged as chief engineer, chief of the staff, and director of the artillery of the Turks in Grand Cairo. In this honorable and lucrative situation he was found by General Eaton, when, in search of Mahmud Bacha, the expelled Pacha of Egypt, he arrived in Egypt. The views of General Eaton in this expedition are well known to your honorable body. But it is very evident that, without any acquaintance with the rulers of Egypt, without a knowledge of the language, and without any means of influence, he must have found insuperable difficulties in every attempt to accomplish his object. He applied to your memorialist. His plan appeared difficult but practicable; should it succeed, and the rightful Bacha be placed on the throne of Tripoli, all the objects of the war, carried on by the Americans against the usurper, would be secured, and the fortune of those to whom his restoration was due, amply provided for. General Eaton did not fail to place before the view of your petitioner all the advantages which he might derive from lending him his active aid, nor did he permit your memorialist in the smallest degree to doubt that, even in case of failure, he should find in the American people the most generous reward for the sacrifice of rank and fortune, the risks of life, and the hardships he might endure in their service. Your memorialist consented. At the peril of his life he quitted the Turkish army and went to the Mamelukes, where he found the expelled Bacha, and prevailed upon him to quit their service and to throw himself upon the protection of the American general. From that moment to the capture of Derne the life of your memorialist was in perpetual danger. For his house and establishment in Alexandria, for his safe and honorable military command in the Turkish army, and the certainty of promotion in their service, he received in exchange an appointment of inspector general and chief engineer in the army of General Eaton, and the hopes and prospects of future fortune in the capture of Tripoli, and the restoration of the Bacha whose cause he had espoused.

Your memorialist leaves it to General Eaton, and those brave officers who served with him, to point out how much the attack, the capture, and the defence of Derne owed to the military experience and knowledge of your memorialist as an engineer. This conquest had scarcely been achieved when the news of peace put an end to all his prospects, and left him in the most abject state of despondence. Having contributed to maintain himself in Derne until the embarkation could be accomplished, he arrived in Syracuse, and having sacrificed all his property and all his expectations in the American cause, he resolved to go in quest of his son and embark with him for America.

Your memorialist therefore departed for the Tyrol, his native country. Passing through Dalmatia, he was known and seized at Velona by the Turks, and made a slave. He had, however, the good fortune to escape on board an English schooner, and, totally destitute, he entered as a non-commissioned officer into the foreign corps raised at Malta, in which he served nearly six months. Having obtained his discharge he returned to Sicily, from whence he made another attempt to come to America in an imperial vessel. The ship was, however, captured by a French privateer, and your petitioner stripped of every thing. By the assistance of Mr. Appleton, American consul at Leghorn, your memorialist at last finds himself in this country, safe from the dangers to which his life has been exposed, but destitute of any regular means of subsistence, without employment, and without hopes, but such as he may be permitted to place on the generosity of the American people.

Unconnected now with any nation on earth but that to which he has sacrificed all other ties—his native country conquered, his estates confiscated—your memorialist solicits such reward as his actual services may appear to merit.

Should it appear to your honorable body, from the certificates and testimonials which accompany this memorial, and to which he refers, that he is deserving of your attention, and should you think proper to assign him a portion of land or any pecuniary compensation as a reward for his services, he hopes to become not a useless citizen of this happy and flourishing country; but, by the cultivation of the vine and olive, by the production of silk, and by those other arts of agriculture in which his youth has been spent, and which are here still in their infancy, to prove substantially his gratitude.

For the truth of the account which your petitioner has given of himself, he begs leave to refer to the certificates and testimonials which accompany this petition and memorial; and your petitioner will ever pray, &c.

GIOVANNI EUGENIO LEITENSORFER.

CITY OF WASHINGTON, January 15, 1811.

ORIGINAL PETITION OF 1811.

To the honorable the Senate and House of Representatives of the United States of America in Congress assembled :

The memorial and petition of Giovanni Eugenio Leitensdorfer respectfully represents; That your petitioner is a native of the south part of Tyrol, in Europe, near the borders of Italy. That, in the year 1804, he was engaged as chief engineer, chief of the staff, and director of the artillery of the Turks in Grand Cairo. In this honorable and lucrative situation he was found by General Eaton when, in search of Mahmud Bacha, the expelled Bacha of Tripoli, he arrived in Egypt. The views of General Eaton in this expedition are well known to your honorable body; but it is very evident that, without any acquaintance with the rulers of Egypt, without a knowledge of the language, and without any means of influence, he must have found insuperable difficulties in every attempt to accomplish his object. He applied to your memorialist; his plan appeared difficult but practicable; should it succeed, and the rightful Bacha be placed on the throne of Tripoli, all the objects of the war carried on against the usurper would be secured, and the fortune of those to whom his restoration was due be amply provided for. General Eaton did not fail to place before the view of your petitioner all the advantages which he might derive from lending him his active aid; nor did he permit your memorialist in the smallest degree to doubt that, even in case of failure, he should find in the American people the most generous reward for the sacrifice of rank and fortune, the risks of life, and the hardships he might endure in their service. Your memorialist consented. At the peril of his life, he left the Turkish army and went to the Mamalukes, where he found the expelled Bacha and prevailed upon him to quit their service and to throw himself upon the protection of the American general. From that moment to the capture of Derne the life of your memorialist was in perpetual danger. For his house and establishment in Alexandria, for his safe and honorable military command in the Turkish army and the certainty of promotion in their service, he received in exchange an appointment of inspector general and chief engineer in the army of General Eaton, and the hopes and prospects of future fortune in the capture of Tripoli, and in the restoration of the Bacha whose cause he had espoused.

Your memorialist leaves it to General Eaton and those brave officers who served with him to point out how much the attack, the capture, and the defence of Derne owed to the military experience and knowledge of your memorialist as an engineer. This conquest had scarcely been achieved when the news of peace put an end to all his prospects, and left him in the most abject state of despondence. Having contributed to maintain himself in Derne until the embarkation could be accomplished, he arrived in Syracuse; and, having sacrificed all his property and all his expectations in the American cause, he resolved to go in quest of his son and embark with him for America.

Your memorialist departed for the Tyrol—his native country. Passing through Dalmatia, he was known and seized at Vclona by the Turks and made a slave. He had, however, the good fortune to escape on board an English schooner; and, being totally destitute, he entered as a non-commissioned officer into the foreign corps raised at Malta, in which he served nearly six months. Having obtained his discharge, he returned to Sicily, from whence he made another attempt to come to America in an imperial vessel. The ship was, however, captured by a French privateer, and your petitioner stripped of everything. By the assistance of Mr. Appleton, American consul at Leghorn, your memorialist at last finds himself in this country, safe from the dangers to which his life has been exposed, but destitute of any regular means of subsistence—without employment and without hopes, but such as he may be permitted to place on the generosity of the American people.

Unconnected now with any nation on earth but that to which he has sacrificed all other ties—his native country conquered, his estates confiscated—your memorialist solicits such reward as his actual services may appear to merit.

Should it appear to your honorable body, from the certificates and testimonials which accompany this memorial, and to which he refers, that he is deserving of your attention, and should you think proper to assign him a portion of land or grant him any pecuniary compensation as a reward for his services, he hopes to become not a useless citizen of this happy and flourishing country; but, by the cultivation of the vine and olive, by the production of silk, and by the exercise of those other arts of agriculture in which his youth was employed, and which are here still in their infancy, to prove *substantially* his gratitude.

For the truth of the account which your petitioner has given of himself, he begs leave to refer to the certificates and testimonials which accompanied a bill from the Senate granting compensation to John Eugene Leitensdorfer; and your memorialist will ever pray, &c.

JOHN EUGENE LEITENSORFER.

CITY OF WASHINGTON, February 1, 1811.

Letter from General William Eaton to President Madison.

BRIMFIELD, December 23, 1809.

The bearer, Colonel John Eugene, of Leitensdorfer, served with me very faithfully in character of adjutant and inspector general in my expedition on the coast of Barbary, in 1805. He exhibited talents, courage, and perseverance. Before the battle of Marengo he commanded a regiment of Tyrolese *chasseurs*, He was extremely useful to us in passing the desert, and at Derne. He seeks an asylum in this country, and I hope he will find patronage.

With profound respect, I have the honor to be, your excellency's very obedient servant,

WILLIAM EATON.

His excellency the PRESIDENT of the *United States*.

SYRACUSE, July 15, 1805.

I certify that Colonel Genic, of Leitensdorfer, has been seven months in the service of the United States of America, in capacity of inspector general and chief engineer, with the allied forces on the coast

of Africa; passed the deserts of Lybia with them, and was extremely useful and active in the defence of Derne while in our hands; for which he merits the respect and protection of the citizens and government of the United States.

WILLIAM EATON,

U. S. Navy Agent of the several Barbary regencies, and late Commander-in-Chief of the forces at Derne.
Countersigned,

GEO. DYSON, *United States Navy Agent, Syracuse.*

CONSULATE OF THE UNITED STATES OF AMERICA.

This may certify that the within is the real handwriting of William Eaton, late navy agent for the United States, and commander of their forces at Derne, &c. In testimony whereof I have hereunto set my hand, at Lisbon, this 31st October, 1806.

W. APPLETON, *Consul.*

UNITED STATES, *Brimfield, December 23, 1809.*

The bearer, Colonel Jean Eugene, of Leitensdorfer—5 feet 9½ inches, dark complexion, hazel eyes, brown hair, and well proportioned—is the same mentioned within, and is hereby recommended to the patronage of the government of our country.

WILLIAM EATON.

Extract from the Life of General William Eaton, page 419.

"In December, 1809, he was visited by Leitensdorfer, or Eugene, the man whom he sent to Upper Egypt in search of the ex-Bashaw, and who acted as a colonel in the battle of Derne. No man ever appeared to be more gratified than General Eaton by this unexpected visit. Leitensdorfer tarried several days, then took his departure for the City of Washington, having first received from Eaton certificates of his unrewarded services, and recommendations to General Bradley, of the Senate, and other members of Congress, to enable him to substantiate and obtain his dues."

Extract from page 424.

"The generosity of the House of Representatives was manifested by the insertion of an amendment to give him a whole section of a mile square (six hundred and forty acres) of land, instead of three hundred and twenty; but the Senate disagreed to it, and the House receded, so that his grant remained as originally introduced."

Extract from General Eaton's Journal.

ALEXANDRIA, *February 16, 1805.*

"We arrived with the Bashaw and suite at the English cut, between Aboukir bay and Lake Mareotis, a week ago last Wednesday. The Bashaw had before come to a resolution to march by land to Derne and Bengazi; and he now moved round the lake to form his camp at the Arab's tower, about thirty miles west of the old port of Alexandria. We shall, therefore, take up our line of march through the desert of Lybia towards Derne, next Wednesday. Our party consists of five hundred men, one hundred of whom are Christians (of all nations) recruited on the spot, and employed in our service. We shall make a stand at Beruba, and wait the return of Captain Hull with supplies and reinforcements, to seize the provinces of Derne and Bengazi; for which purpose he sails for that rendezvous day after to-morrow. How glorious to see our fellow-citizens in captivity in Tripoli march in triumph from a dungeon to their tyrant's palace, and display the flag of the United States.

"Here is a ketch from Tripoli, sent with an envoy to prevent Hamet, Bashaw, from leaving Egypt; but not having the only agent which carries everything, (money,) he must return to give Joseph, Bashaw, information of the fate that awaits him. If our measures are supported, he must fly his kingdom or die."

The expedition marched with a caravan of one hundred camels and their owners and drivers, to carry their baggage; the distance six hundred miles—a desert all the way—and water extremely scarce. Almost every day the Arabs mutined; the Christians often stood to their arms to save themselves from being robbed and murdered. At the end of fifty-six days of painful and perilous marching, in the midst of every hardship and danger, they arrived at Derne, captured it, defeated the reigning Bashaw's troops, (1st of June,) and had every prospect of marching as conquerors upon Tripoli, but peace was made with the reigning Bashaw, (4th of June,) an article inserted in it to withdraw the American forces and give no aid to the rebels at Derne. On the 13th June the United States frigate Constellation anchored before Derne, sent information of the peace, and of the necessity of General Eaton, Hamet, and his chief followers to come on board; this was effected about midnight, and the greatest precautions were necessary to conceal the movement to prevent those who came on board from being massacred by the deserted and enraged multitude left behind. The following extract from General Eaton's letter to Commodore Rogers, commanding the squadron, will give some idea of it.

General Eaton to Commodore Rogers.

"I now communicated to Hamet Bashaw the news of peace with his brother. He said he had no safety but in leaving the country with us; and even this would be impossible with him, and hazardous for us, if the project should transpire before carried into effect; despair would drive his adherents to revenge, and we must all fall victims to it. I accordingly kept up the idea of an attack on the enemy, and sent ammunition and extra rations to Moorish and Arab troops. At eight in the evening I placed patrols of marines to stop intercourse between the town and our post. In the meantime all the Constellation's boats were laid alongside our wharf. I ordered the captain of cannoniers to embark his company, and after them the Greek company. This was done in silence. When the boats were seen returning I sent a message to Hamet Bashaw. Understanding the purport of this, he immediately repaired to the fort with his retinue, (about thirty persons, including Colonel Eugene Leitensdorfer,) dismounted, and embarked in the boats. The marines followed with the American officers. When all were securely off I stepped into a small boat, and had just time to save my distance, when the shore, our camp, and the battery, were crowded with the distracted soldiery and populace; some calling on the Bashaw Hamet, some on me, some uttering shrieks, some execrations."

(A massacre took place next day among those who did not save themselves by flying to the mountains and desert.)

Extract from the treaty of peace and amity between the United States and Joseph, Bashaw of Tripoli, June 4, 1805.

"ARTICLE 3 All the forces of the United States which have been, or may be, in hostility against the Bashaw of Tripoli, in the province of Derne, or elsewhere within the dominions of said Bashaw, shall be immediately withdrawn therefrom, and no supplies shall be given by, or in behalf of, the said United States during the continuance of this peace to any of the subjects of said Bashaw, who may be in hostility against him, in any part of his dominions; and the Americans will use all means in their power to persuade the brother of said Bashaw, who has co-operated with them at Derne, &c., to withdraw from the territory of the said Bashaw of Tripoli; but they will not use force, or improper means to effect that object; and, in case he should withdraw himself as aforesaid, the Bashaw engages to deliver up to him his wife and children now in his power."

It appears by a message of Mr. Jefferson to the Senate of the United States, November 11, 1807, that, by a declaration assigned by Mr. Lear, the negotiator of this treaty, *the day after it was made*, the Bashaw was allowed four years to deliver up the wife and children of his brother, and thereby got rid of the only clause in the treaty favorable to Hamet.

Hamet Caramalli to the people of the United States.

"SYRACUSE, September 1, 1805.

"It is known to the whole world that the reigning Bashaw at Tripoli, Jussuf, obtained the throne by the murder of our father and elder brother, and by my exile, who came next in succession. Driven by his impious and cruel usurpation, I took refuge in Egypt, where I was kindly received by the Mamaluke Beys, who gave me a distinguished rank in the military service. Reposing in the security of peace, I had ceased to repine for the loss of my throne, and regretted only the lot of my unhappy subjects, doomed to the yoke of my cruel and tyrannical brother.

"It was at this epoch that the arrival of General Eaton gave me hopes of better fortune; and, though I could not tell what were his powers, I trusted to the faith of a great people, of whom he was the ostensible representative, and threw myself into his arms. With our joint followers, we had already advanced six hundred miles into the kingdom of Tripoli, and a general defection had seized my brother's army, and all things prepared the *protected* of America to be hailed sovereign of his usurped throne. At this juncture a peace is concluded, in which a throne, acquired by rapine and murder, is guaranteed to its usurper; and I, the rightful sovereign, the friend and ally of America, am left unprovided for. No article in my favor; no provision for me and my family, and no remuneration for the advantages I had foregone in trusting to American honor, I am left at Syracuse, with thirty dependents, on the pittance of two hundred dollars a month.

"In this situation I appeal to the virtue, generosity, and candor of the people, and candor of America. I trust that a brave and free nation will interest itself in behalf of a fallen prince, who had trusted to its national honor and good faith. I trust the government will take my case into consideration, and at least send me back to Egypt, indemnified for those comforts lost by uniting my fortune to theirs."

An act for the temporary relief of Hamet Caramalli.

"That the sum of two thousand four hundred dollars be, and is hereby, appropriated, to be paid out of any moneys in the treasury not otherwise appropriated, to be applied, under the direction of the President of the United States, to the immediate and temporary relief of Hamet Caramalli, ex-Bashaw of Tripoli.—(April 21, 1806; vol. 4, p. 50, Laws U. S.)

Copy of a letter from Mr. Latrobe.

WASHINGTON, January 30, 1811.

SIR: In compliance with your desire, expressed in your letter of yesterday, I cheerfully add my testimony to that of others, respecting the character of Mr. E. Leitensdorfer. Mr. E. Leitensdorfer was brought to me for the purpose of enabling him to explain his situation and his wants to Congress. He was at that time without any means of providing the common necessities of life. I employed him in my office, in drawing and writing; and in the field, in surveying and levelling, for the Washington Canal and Turnpike Road Companies. With his history, prior to my knowledge of him, I could only be acquainted from the written testimonies in his possession, which no doubt have been all before you, and from his own information. I never had reason to hesitate as to his strict adherence to truth in those points in which I could decide on his veracity, and therefore am willing to give him credit for the truth of his account of himself throughout.

During the time of my acquaintance with him his personal conduct has been most scrupulously honorable and virtuous. Far from having any habitual vices, he is abstemious in all his enjoyments. He submits without a murmur to perform any duty, however menial, by which he can secure an independent existence; and has rigidly and perseveringly refused all gifts and subscriptions for his support. He has actually maintained himself since his arrival. As to his knowledge, it is very evident that he has had a liberal education, and is a good field engineer. He speaks several living languages, and is a good Latin scholar; with the cultivation of the vine and the management of fruit trees he is so well acquainted as to have been of singular service in the gardens of many of the inhabitants of this district. He professes, also, to understand the business of raising silk worms, and of the culture of the olive, and, in general, to be master of those branches of culture which all the nobility of Tyrol and the nobles of Italy depend upon for their incomes. To his virtuous and peaceable demeanor the inhabitants of the part of the city near the Capitol can bear unanimous testimony. I have now known him and narrowly observed him for more than a year. His conduct has been uniform, and I have no hesitation in declaring him to be a man whose principles and actions would honor any country, and whose knowledge, industry, and talents may be exceedingly serviceable to our own.

Yours, very respectfully,

HENRY LATROBE.

Hon. General BRADLEY.

"An act making compensation to John Eugene Leitensdorfer for services rendered the United States in the war with Tripoli.

"That the Secretary of War be, and he is hereby, directed to issue a land warrant to John Eugene Leitensdorfer for three hundred and twenty acres; which said warrant may, at the option of the holder or possessor, be located with any register or registers of the land offices on any of the public lands of the United States lying on the west side of the Mississippi then and there offered for sale, or may be received at the rate of two dollars per acre in payment of any such lands.

"SEC. 2. That the proper accounting officers of the treasury be, and they are hereby, directed to settle the account of John Eugene Leitensdorfer, and to allow him the pay of a captain from the 15th day of December, 1804, to the 15th day of July, 1805, being the time he served as adjutant and inspector of the forces of the United States in Egypt and on the coast of Barbary."—(February 13, 1811. Vol. 4, page 321 of the Laws of the United States.)

Letter from General Clark, of Missouri.

St. Louis, November 19, 1834.

The bearer hereof, Colonel Eugene Leitensdorfer, has been settled in the village of Carondelet, and in the neighborhood of the city of St. Louis, for the last twenty years; I have known him during that period, and believe him to be a high-minded, honorable man. It is known that he performed a conspicuous part in the attack upon Derne, under General Eaton, in 1805. As a cultivator of the soil he has been industrious, having necessarily to labor hard to raise and educate his children. Of late years the sickness in his family by cholera, and the entire destruction of his fruit trees by the repeated frosts for the last three years, have entirely destroyed his means of supporting himself and children.

As this gentleman has been wounded severely in the knee in the attack on Derne, it is believed that he has a just claim to assistance from the government.

WM. CLARK.

Discharge of Sergeant Eugenius Leitensdorfer from Count Froberg's regiment.

COUNT FROBERG'S REGIMENT.

Know all whom this may concern, that the bearer, Eugenius Leitensdorfer, born at Roita, in the Tyrol, aged thirty-eight years, five feet nine and a half inches high, brown complexion, dark hair and brown eyes, served in the above-mentioned regiment from December 1, 1805, to May 27, 1806, in the several capacities of corporal and sergeant, during which time he fully has deserved the esteem of his officers by his good conduct; and, on account of his procuring a substitute for himself, and in regard to his aforesaid good behaviour, is discharged from the above-mentioned regiment, and at full liberty to engage or render himself wherever he pleases.

Given under my hand and seal at Fort Recasoli, in the island of Malta, this twenty-eighth day of May, in the year of our Lord one thousand eight hundred and six.

A. SCHUMMELKETEL, *Commanding Officer.*

No. 590.

[2D SESSION.]

ON MAKING FURTHER PROVISION FOR THE REPAIR OF FORT MARION AND THE SEA-WALL IN FRONT OF ST. AUGUSTINE, FLORIDA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 7, 1835.

Mr. THOMSON, from the Committee on Military Affairs, who were instructed to inquire into the expediency of making a further provision for repairing Fort Marion, near St. Augustine, reported:

It appears from the papers submitted to the committee that Fort Marion, sometimes called Fort St. Mark's by the Spaniards, was erected at very great expense by the Spanish government according to the most approved modern plans of fortification. That it is situated near the town of St. Augustine, and commands the entrance into the harbor from the Atlantic ocean as well as the passage through the North river from the direction of St. Mary's. It is erected upon elevated ground, and from its position commands the gate and passage over the circumvallations which surround the ancient city of St. Augustine.

This fortification was in good repair, and garrisoned with Spanish troops, at the cession of Florida to the United States. Connected with it, and extending from it to the barracks of St. Francis, was erected a sea-wall of stone to preserve the town and fort from the encroachments of the sea. Soon after the transfer of the Floridas to the United States, some subordinate officers of the government, having occasion to use stone in the construction of a wharf leading to the barracks, removed a portion for that purpose of this sea-wall, erected at great expense by the Spanish government for the preservation of the town.

In consequence of this removal of a part of this sea-wall, and the encroachments of the sea, the fortification, which stands immediately on the bank, is about to have the foundation washed from under it, and the magnificent castle precipitated into the sea.

Upon the representations of the city council, and officers, civil and military, of the United States, Congress appropriated \$20,000 to repair the fort and reconstruct the sea-wall.

A portion of this sum, it appears, has been expended by the officer in charge of the work, without any beneficial result or satisfactory report. The officer is under arrest. It is represented that this fort cost \$2,000,000, and it is also stated that the city of St. Augustine, in consequence of the breach in the sea-wall, was nearly submerged upon one occasion of a very high tide. The repairs of this fort have been commenced after a careful consideration of all these facts and circumstances by Congress, without any report of engineers, and the committee are of opinion that it does not require such report to inform the representatives of the nation that such a work ought to be repaired and preserved. Justice, too, to the inhabitants of St. Augustine, as well as the interest of the people of the United States, requires that this sea-wall shall be repaired, reconstructed, and placed in the situation that it was when Spain surrendered it to the United States. This fort may not occupy a very favorable position in the plans of maritime defence as at present presented by the United States engineers, in consequence of the depth of water on the bar of the harbor. This, in the opinion of the committee, does not constitute a sufficient reason for abandoning a work commenced under the authority of a law of the United States, especially when we see that, by the reports of the engineers, a communication is contemplated from St. John's into the head of the North river, which will make the navigation continuous for steamboats from Charleston to St. Augustine.

A proposition is also before another committee, upon the report of the engineers, to deepen the bar of St. Augustine, or cut through an island, and make that the finest harbor on the southern coast.

While these projects are in contemplation, and whilst St. Augustine continues, and will long continue, from its healthy climate, a military post, the committee conceive that this work ought to be repaired and preserved. It appears by a report of the officer, and the various papers submitted, that it can be effectually done for \$44,181 94. They therefore recommend that the chairman move to insert the following clause in the appropriation bill for fortifications:

"For the repair of Fort Marion, and the reconstruction of the sea-wall between it and the St. Francis barracks, forty-four thousand one hundred and eighty-one dollars and ninety-four cents."

WAR DEPARTMENT, December 30, 1834.

SIR: In compliance with the requisitions of a resolution of the House of Representatives of the 11th instant respecting the fort and sea-wall at St. Augustine, Florida, I have the honor to transmit herewith a report from the chief engineer, with sundry accompanying papers, which contain the information called for.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. JOHN BELL, *Speaker of the House of Representatives.*

ENGINEER DEPARTMENT, Washington, December 30, 1834.

SIR: In compliance with the resolution of the House of Representatives of the 11th instant, I have the honor to enclose you a copy of the report of the officer charged with the repairs of Fort Marion and the construction of the sea-wall at St. Augustine, Florida, together with his estimate for the completion of the same.

This report has only been received within a few days, which will explain the delay that has occurred in complying with the directions of the House.

I am, sir, very respectfully, your obedient servant,

C. GRATIOT.

HON. LEWIS CASS, *Secretary of War.*

PLAN
of
A PART OF THE FRONT
of the
City of Saint Augustine, Florida.

and of
Fort Marion and the Sea-wall.

Scale 100 feet per Inch

23D CONGRESS.]

No. 590.

[2D SESSION.]

ON MAKING FURTHER PROVISION FOR THE REPAIR OF FORT MARION AND THE SEA-WALL IN FRONT OF ST. AUGUSTINE, FLORIDA.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 7, 1835.

Mr. THOMSON, from the Committee on Military Affairs, who were instructed to inquire into the expediency of making a further provision for repairing Fort Marion, near St. Augustine, reported:

It appears from the papers submitted to the committee that Fort Marion, sometimes called Fort St. Mark's by the Spaniards, was erected at very great expense by the Spanish government according to the most approved modern plans of fortification. That it is situated near the town of St. Augustine, and commands the entrance into the harbor from the Atlantic ocean as well as the passage through the North river from the direction of St. Mary's. It is erected upon elevated ground, and from its position commands the gate and passage over the circumvallations which surround the ancient city of St. Augustine.

This fortification was in good repair, and garrisoned with Spanish troops, at the cession of Florida to the United States. Connected with it, and extending from it to the barracks of St. Francis, was erected a sea-wall of stone to preserve the town and fort from the encroachments of the sea. Soon after the transfer of the Floridas to the United States, some subordinate officers of the government, having occasion to use stone in the construction of a wharf leading to the barracks, removed a portion for that purpose of this sea-wall, erected at great expense by the Spanish government for the preservation of the town.

In consequence of this removal of a part of this sea-wall, and the encroachments of the sea, the fortification, which stands immediately on the bank, is about to have the foundation washed from under it, and the magnificent castle precipitated into the sea.

Upon the representations of the city council, and officers, civil and military, of the United States, Congress appropriated \$20,000 to repair the fort and reconstruct the sea-wall.

A portion of this sum, it appears, has been expended by the officer in charge of the work, without any beneficial result or satisfactory report. The officer is under arrest. It is represented that this fort cost \$2,000,000, and it is also stated that the city of St. Augustine, in consequence of the breach in the sea-wall, was nearly submerged upon one occasion of a very high tide. The repairs of this fort have been commenced after a careful consideration of all these facts and circumstances by Congress, without any report of engineers, and the committee are of opinion that it does not require such report to inform the representatives of the nation that such a work ought to be repaired and preserved. Justice, too, to the inhabitants of St. Augustine, as well as the interest of the people of the United States, requires that this sea-wall shall be repaired, reconstructed, and placed in the situation that it was when Spain surrendered it to the United States. This fort may not occupy a very favorable position in the plans of maritime defence as at present presented by the United States engineers, in consequence of the depth of water on the bar of the harbor. This, in the opinion of the committee, does not constitute a sufficient reason for abandoning a work commenced under the authority of a law of the United States, especially when we see that, by the reports of the engineers, a communication is contemplated from St. John's into the head of the North river, which will make the navigation continuous for steamboats from Charleston to St. Augustine.

A proposition is also before another committee, upon the report of the engineers, to deepen the bar of St. Augustine, or cut through an island, and make that the finest harbor on the southern coast.

While these projects are in contemplation, and whilst St. Augustine continues, and will long continue, from its healthy climate, a military post, the committee conceive that this work ought to be repaired and preserved. It appears by a report of the officer, and the various papers submitted, that it can be effectually done for \$44,181 94. They therefore recommend that the chairman move to insert the following clause in the appropriation bill for fortifications:

"For the repair of Fort Marion, and the reconstruction of the sea-wall between it and the St. Francis barracks, forty-four thousand one hundred and eighty-one dollars and ninety-four cents."

WAR DEPARTMENT, December 30, 1834.

SIR: In compliance with the requisitions of a resolution of the House of Representatives of the 11th instant respecting the fort and sea-wall at St. Augustine, Florida, I have the honor to transmit herewith a report from the chief engineer, with sundry accompanying papers, which contain the information called for.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. JOHN BELL, *Speaker of the House of Representatives.*

ENGINEER DEPARTMENT, Washington, December 30, 1834.

SIR: In compliance with the resolution of the House of Representatives of the 11th instant, I have the honor to enclose you a copy of the report of the officer charged with the repairs of Fort Marion and the construction of the sea-wall at St. Augustine, Florida, together with his estimate for the completion of the same.

This report has only been received within a few days, which will explain the delay that has occurred in complying with the directions of the House.

I am, sir, very respectfully, your obedient servant,

C. GRATIOT.

Hon. LEWIS CASS, *Secretary of War.*

FORT MARION, *St. Augustine, Florida, December 8, 1834.*

Sir: At the request of some of the most influential citizens of this city, I have made, and have now the honor to transmit for your consideration, estimates for the necessary repairs of Fort Marion, and plans and estimates for the completion of that part of the sea-wall commenced under an appropriation made by Congress during the session of 1832-'33, which remains unfinished, and is entirely useless until it is completed; also an estimate for its continuance in front of the city of St. Augustine, as far as the wharf in front of the public barracks, beyond which the shores of the bay of St. Augustine are not affected by the violence of the waves of the Atlantic ocean during the prevalence of the severe northerly and northeasterly gales, which occasionally elevate the tide to the height of from six to ten feet above common low water, and overflowing a greater part of the city, and in many instances have caused great damage to both public and private property.

The repairs of Fort Marion estimated for are only such as are *absolutely necessary* for the preservation of the work, and do not extend to what would be necessary for putting the fort in a state of complete repair, for which purpose an estimate to cover all the expense of all the wood-work necessary in fitting up casemates either for quarters or storehouses would be required, there having been but three out of twenty-three fitted up under the appropriation above referred to. There would also be required an estimate for a new terrace, entire, for turning off the water from the terreplein, the present having been broken up in many places, and allowing the water to pass freely through to the arches.

The part estimated for is rendered absolutely necessary, for the following reasons: On an examination of the plan herewith it will be found that one bastion front of the work rests immediately on the bay shore, the sea-wall or water-battery of which has been completely undermined by the constant attrition of the waters of the bay, and the masonry is now daily tumbling to ruins, and in two different parts the water passes freely through into the ditch of the fort, and has commenced the same destruction on the body of the fort that has been effected with the sea-wall; and should some step not be taken soon to check the encroachments of the sea the whole structure must speedily and prematurely become a pile of ruins. On the other hand, should the government cause a few thousand dollars to be judiciously expended on it, it would remain for ages a monument, and not an unworthy one, of the Spanish nation, by whom it was erected, and a memento of events ever memorable in the history of our country. And should the government at any time find it necessary for the defence of this coast, it could in a short time, and at a moderate expense, be put in a state of perfect repair and defence. All of which I have the honor to submit, with the hope that the object may meet with your favorable consideration.

I, am, sir, very respectfully, your obedient servant,

F. L. DANCY, *First Lieutenant and Agent, &c.*

General CHARLES GRATOT.

Estimate of funds required for the repairs of Fort Marion and the re-construction of the sea-wall near the same, and its extension in front of the city of St. Augustine, Florida.

For reconstructing the sea-wall or water-battery of the fort, in length 590 feet, and a section of 45 cubic feet per running foot.....	265.50	squares of stone.
Deduct the old stone at present in the wall which may be used in re-building 200 square of stone (of 100 cubic feet)	200.00	"
Quantity required.....		65.50 squares.
For completing that part of the wall (commenced under a former appropriation) from its junction with the wall of Fort Marion, 870 feet south, to its termination at point A, (see plan) on an average height of 8 feet, and section of 40½ cubic feet per running foot.....	350.17	squares of stone.
Deduct stone already laid on the wall, being.....	251.67	"
Number of squares required.....		98.50 squares.
From point A to point B the old wall is in good preservation with the exception of an interval of 40 feet which will require 16.10 squares of stone.....		16.10 squares.
From point B to point C, distance 610 feet, section 40½ cubic feet is.....		245.52 squares.
From point C to point D, distance 314 feet, section 40½ cubic feet.....		126.38 squares.
From point D to point E at the barrack wharf, distance 1,128 feet, section 40½ cubic feet		454.00 squares.
For constructing two breakwaters 200 feet each in length, and section 192 cubic feet (see plan).....		768.00 squares.
Total quantity of stone required for reconstructing the water-battery and the sea-wall in front of the city of St. Augustine to the wharf in front of St. Francis' barracks		1,773.80 squares.
Cost of quarrying, hauling, and transporting the stone, at \$14 per square of 100 cubic feet is.....	\$14 10	
Cost of laying the masonry of the wall per square.....	4 00	
Total cost per square of 100 feet.....	18 00	
Amount required 1,773.80 squares at \$18 per square.....		\$31,938 40
For filling with earth and shells in rear of the wall a width of 50 feet and average height 3 feet, whole length 2,962 feet, will make 16,455 cubic yards at 50 cents per cubic yard.....		8,227 00
Amount required.....		40,165 40
Contingencies 10 per cent.....		4,016 54
Total amount of funds required.....		44,181 94

F. L. DANCY, *1st Lieutenant and Agent.*

23D CONGRESS.]

No. 591.

[2D SESSION.]

THE CONSTRUCTION OF FORT SUMTER, CHARLESTON HARBOR, SOUTH CAROLINA,
SUSPENDED BY A LAND PATENT COVERING ITS SITE GRANTED BY THAT STATE TO
AN INDIVIDUAL.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 7, 1835.

DEPARTMENT OF WAR, *January 6, 1835.*

SIR: In answer to the call of the House of Representatives of the 30th ultimo, in reference to the causes which led to the suspension of operations at Fort Sumter, in Charleston harbor, and, if any, what measures have been taken by the department in relation thereto, I have the honor to state that, on the 3d of November last the officer superintending the construction of that work was notified, by W. Laval, esq., that he had taken out, from under the seal of the State, a grant for all those shoals opposite and below Fort Johnson, on one of which Fort Sumter is erecting, and that he must consider that communication as a notice of his right to the same. On the 4th of the same month, the officer thus notified advised the department of the circumstance, and requested instructions in the case. In answer, he was directed to procure, through the district attorney, a copy of the ordinance upon which the grant in question was taken out, together with a copy of the grant, and all laws of a general nature relating to the subject, to be laid before the Attorney General for his opinion, and until this opinion was had to suspend all operations at that fort. All the information required has reached the department, a copy of which is sent for the further information of the House, and the originals will be submitted to the Attorney General for the purpose above stated.

I am, very respectfully, sir, your obedient servant,

LEW. CASS.

HON. JOHN BELL, *Speaker of the House of Representatives.*

ENGINEER DEPARTMENT, *Washington, January 2, 1835.*

SIR: I have the honor to hand you copies of sundry papers relating to the claim advanced by W. Laval, esq., to that portion of Charleston harbor proposed to be occupied by Fort Sumter, which have been furnished by the officer of engineers in charge of that work, in compliance with your directions.

I am, very respectfully, sir, your obedient servant,

C. GRATIOT, *Chief Engineer.*

HON. LEWIS CASS, *Secretary of War.*

FORT JOHNSON, *Charleston Harbor, November 4, 1834.*

SIR: I have the honor to forward to you a copy of a notice to this office from Major W. Laval, notifying the department of his right to the shoal on which the foundation of Fort Sumter has been commenced. Lieutenant Brown not having yet arrived at this post, and from the advice rendered me by the district attorney not to wait his arrival, but to communicate the fact to you immediately, I have, in compliance with that advice, enclosed you a copy of the notice.

I am, sir, very respectfully, your obedient servant,

ROBERT LEBLY, *M. D., Superintending fortifications Charleston harbor.*

Brigadier General CHARLES GRATIOT.

CHARLESTON, *November 3, 1834.*

SIR: You are hereby notified that I have taken out, from under the seal of the State, a grant of all those shoals opposite and below Fort Johnson, on one of which the new work, called Fort Sumter, is now erecting. You will consider this as notice of my right to the same; the grant is recorded in the office of the secretary of state of this State, and can be seen by reference to the records of that office.

W. LAVAL.

The UNITED STATES ENGINEER *resident at Fort Johnson.*

ENGINEER DEPARTMENT, *Washington, November 19, 1834.*

SIR: The copy of the notice to you from W. Laval, esq., stating his right to the shoal on which the foundation of Fort Sumter has been commenced, is at hand. It is the wish of the department that you obtain from the district attorney in Charleston a copy of the ordinance of the State upon which the grant to the shoals mentioned was taken out, and a copy of the grant, as well as all laws of a general nature relating to this subject; and that you prepare, with as little delay as practicable, a drawing showing the situation and condition of the shoal prior to the commencement of Fort Sumter, with a full report upon its present state, and showing whether, at any time, it ever appeared above water.

I have the honor, &c.,

C. GRATIOT, *Brigadier General.*

Lieutenant T. S. BROWN, *Corps of Engineers, Fort Johnson, Charleston Harbor, S. C.*

ENGINEER OFFICE, FORT JOHNSON, *Charleston Harbor, December 8, 1234.*

SIR: In obedience to the requirements of your letter of the 19th ultimo, I have the honor to submit the following report in relation to the foundation of Fort Sumter, and to the claim advanced by W. Laval, esq., to that portion of Charleston harbor which the fort occupies. The accompanying papers, numbered 1 and 2, were handed me by the district attorney for South Carolina, and consist, 1st, of a copy of the grant taken out by W. Laval, esq., for 870 acres of *low land*.

2d. Of copies of the law under which the grant was made, and of various other laws of South Carolina relating to land, and which are supposed to have some bearing upon the question, and to be embraced by the general clause in your letter requiring copies of "all laws of a general nature relating to the subject."

The following charts also accompany this communication, viz:

No. 1. A map of Charleston harbor, intended to exhibit the situation of Fort Sumter with relation to the channel, the other works for the defence of the harbor, &c.

No. 2. A chart exhibiting the situation of the shoal on which Fort Sumter is placed, before the work was commenced.

No. 3. A drawing intended to show the actual condition of the foundation of Fort Sumter.

An inspection of map No. 1 will show that Fort Sumter, which is supposed to be embraced within the limits claimed by W. Laval, is nearly in the centre of the lower part of Charleston harbor, by which, however, the tract is said to be *bounded* on the north and west. What is designated as "Morris's island creek" must refer to a small blind channel on the northwest side of Morris's island; and as to James's island creek, which is said to form part of the southern boundary, nothing can be discovered, either on the map or on the ground, to which the name can, by any degree of latitude of construction, be applied. No boundary is designated on the eastern side from which it may be reasonable to infer that if found at some future period to be convenient, the limits in that direction may be extended quite across the channel.

That part of your letter which requires a full report upon the present state of Fort Sumter, is supposed to be answered by drawing No. 3. The following observations, however, may be added as coming within your meaning:

The report of the board of engineers for fortifications, submitting the plan of the fort, since directed to be called Fort Sumter, is dated December 1, 1827. The general position and character of the work were, it is believed, decided upon several years previous, during the administration of the Department of War by Mr. Calhoun, and the laborious and accurate survey of Major Bache, which intervened, was necessary to enable the board to determine the precise situation and details of the structure. The first appropriation for the "fortifications in Charleston harbor" was made in 1828, and active operations on Fort Sumter began in 1829. Since that period the work has been steadily progressing, as rapidly as the tedious and difficult operation of procuring stone from the north for the formation of the foundation, and the attention and expense bestowed upon other important objects connected with the defence of Charleston harbor would admit.

Up to this period about \$220,000 have been expended on the foundations of Fort Sumter, and, as the drawing No. 3 indicates, they are now raised to a general level of about two feet above low water, and have reached the point at which it is proper to commence the regular masonry of the work.

The mole which has been formed appears, as far as it has yet been in the power of the superintending engineer to make observations, to have undergone no material change from settling; and nothing has occurred to suggest a doubt whether the work will possess the permanence of those which have been or which may be erected on the sandy margin of the harbor, above the level of the tide.

An idea has been thrown out that the formation of the mole for Fort Sumter is connected in some way with the rapid encroachments of the sea upon Sullivan's island, and that it has had an injurious influence; but it is impossible for me to perceive, from an attentive study of the chart of the harbor, and of all the circumstances which have a bearing upon the question, that there is a shadow of foundation for such an opinion.

With reference to the question whether the position occupied by Fort Sumter has ever, at any time, appeared above water, I have made diligent inquiries, and the conclusion to which I have arrived is, that it would be easy to prove, by testimony as direct as the nature of the question admits, that that spot was never left dry previous to the commencement of the work. The following gentlemen, who have had the most favorable opportunities for observation, express, in unequivocal terms, such to be their belief, viz: T. H. Jervy, surveyor of the port of Charleston, Doctor Johnson, president of the United States Branch Bank, Mr. Josiah Taylor, Captain Butler, Captain Fuller, Mr. Lee, pilot, William Smith, jun., Samuel Webber, &c. The list could be increased to any desired extent. Since the circuit formed by the stones has been rendered complete, with the exception of one gap left for the admittance of vessels at high tide, the sand has accumulated within, and a few square yards are now occasionally left bare at low water.

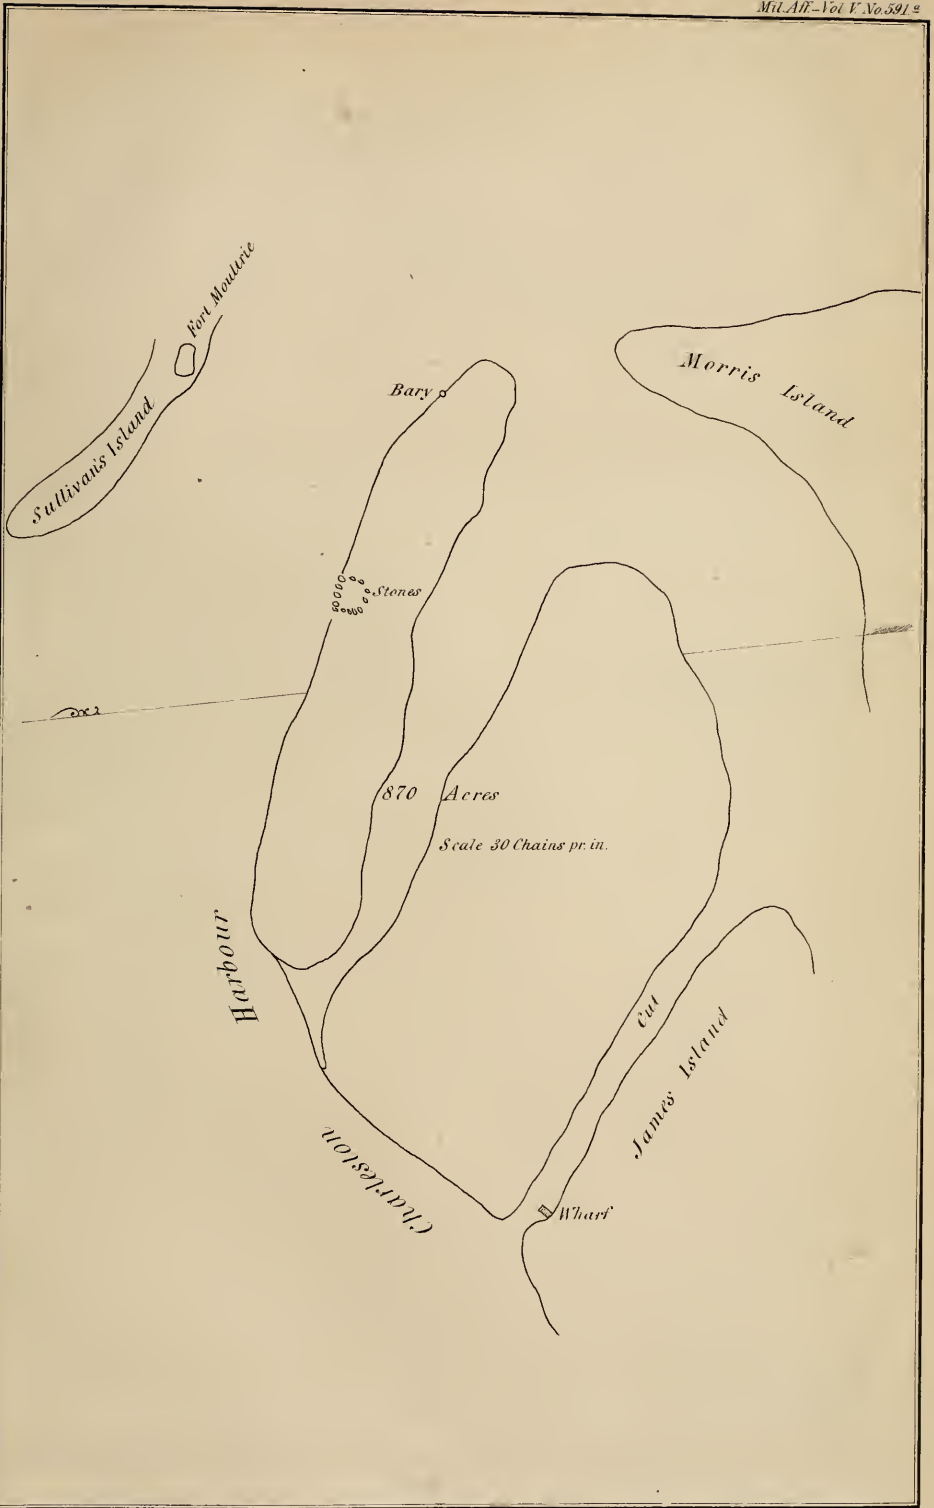

The plat accompanying the grant to William Laval bears, as will be perceived, no resemblance to the actual shape of the shoal which it purports to represent. It resembles, however, a delineation of the shoal on a chart of Charleston harbor, which is drawn on a large scale on the corner of "a map of South Carolina, constructed and drawn from the district surveys ordered by the legislature, by John Wilson, late civil and military engineer of South Carolina," from which it was probably copied. An actual survey, with chain and compass, of the 870 acres of low land which W. Laval claims was of course impracticable, as over much of it the water is at all times 8 or 10 feet deep; and it is even doubted whether the ceremony was gone through with of carrying surveyors' instruments to the nearest sandbank to the "plantation" in question.

This report would have been forwarded some days earlier but for the delay in procuring the necessary copies of laws.

I have the honor to be, very respectfully, your obedient servant,

T. S. BROWN, *Lieut. U. S. Engineers.*

Brig. Gen. C. GRATIOT, *Chief Engineer, Washington City.*

STATE OF CALIFORNIA

No. 1.

STATE OF SOUTH CAROLINA.

To all to whom these presents shall come, greeting:

Know ye that, in pursuance of an act of the legislature entitled "An act for establishing the mode of granting the lands now vacant in this State, and for allowing a commutation to be received for some lands that have been granted," passed the 19th day of February, 1791, we have granted, and by these presents do grant, unto William Laval, his heirs and assigns, a plantation or tract of land, containing eight hundred and seventy acres, surveyed for him the 24th March, 1834, situate in the district of Charleston, bounded on the north and west by Charleston harbor, on the south by James's Island creek and Morris's Island creek, having such shape, form, and marks, as are represented by a plat hereunto annexed, together with all woods, trees, waters, water-courses, profits, commodities, appurtenances, and hereditaments whatsoever, therunto belonging; to have and to hold the said tract of eight hundred and seventy acres of land, and all and singular other the premises thereby granted unto the said William Laval, his heirs and assigns, forever, in free and common soccage.

Given under the seal of the State.

Witness, his excellency Robert Y. Hayne, esquire, governor and commander-in-chief in and over the said State, at Charleston, this fifth day of May, anno Domini one thousand eight hundred and thirty-four, and in the fifty-eighth year of the independence of the United States of America.

R. Y. HAYNE, [L. M. S.]

And hath thereunto a plat thereof annexed representing the same, certified by

SAMUEL KINGMAN, *Deputy Surveyor General.*

MARCH 25, 1834.

SECRETARY OF STATE'S OFFICE, *Charleston, November 26, 1834.*

A true copy, taken from Grant Book O, No. 6, page 9, examined and certified by

SAMUEL KINGMAN, *Deputy Secretary of State.*

No. 2.

AN ACT for establishing the mode of *granting lands now vacant* in this State, and for allowing a commutation to be received for some lands that have been granted.

Whereas all the available lands in this State have already been granted, and such as are now vacant will remain so, if the sum of ten dollars, in indents, be required by the public for every hundred acres thereof, and no taxes will be paid for the same:

Be it therefore enacted by the honorable the senate and house of representatives now met and sitting in general assembly, and by the authority of the same, That so much of the first and second sections of an act entitled "An act for establishing the mode and conditions of surveying and granting the vacant lands within this State," passed the 21st March, 1784; and that so much of the first section of an act entitled "An act to alter and amend an act entitled 'An act for establishing the mode and conditions of surveying and granting the vacant lands within this State,' and for other purposes therein mentioned," passed the 24th March, 1785, as relates to the granting and selling such lands within this State as are now vacant, at the rate of ten dollars for every hundred acres, be, and the same is hereby, repealed; and that such vacant lands be granted to any citizens applying for the same on paying the fees of office.

And whereas grants for many thousand acres of land within this State have been obtained, at the rate of ten dollars, in indents, for every hundred acres, and some of the grantees have suffered their grants to remain in the secretary's office without applying for them; and where such lands have been put up for sale by the treasurers on account of the non-payment of the said ten dollars per hundred acres, the sums produced by such sales were very trifling:

Be it therefore enacted, by the authority aforesaid, That where lands have been so granted, and have not been resold by the treasurers aforesaid, it shall and may be lawful for the treasurers, and they are hereby required, on receiving four shillings and eight pence, specie or paper medium, from the grantees of the said land, for every hundred acres thereof, in lieu of ten dollars in indents, to give the grantee paying such commutation a discharge for the same, and an order on the secretary of state to receive his grant on paying the fees; and the said secretary is hereby required, on receiving such order and payment, to deliver the grants to the grantees, respectively, who shall be so entitled to them.

And be it further enacted by the authority aforesaid, That all grants of lands in the secretary's office, and which shall not be taken out within twelve months from the passing of this act, be then sold to the highest bidder by the commissioners of the treasury.

And be it further enacted by the authority aforesaid, That where any person or persons have paid aggregate sums into the treasury as a portion or part of the purchase money due to the State for divers tracts of land without ascertaining the particular tract or tracts which they would be understood so to have paid for; that in all such cases the commissioners of the treasury may sell such tract or tracts, or as much thereof as may be sufficient to make up the balance due to the State as have been granted to such persons and are not paid for as they may think proper, at public sale, under and by virtue of this act.

And be it further enacted by the authority aforesaid, That the governor, for the time being, be, and he is hereby, authorized and empowered to appoint a proper person as commissioner of locations in each of the location districts in this State, which commissioner shall observe all such regulations and restrictions as are by law established for regulating the mode and conditions of surveying and granting the vacant lands in the State.

And be it further enacted by the authority aforesaid, That this act shall not be considered to be of force so as to enable any survey whereon to found a grant under and by virtue of this act, nor any application to relapse any survey already made, to be effectual till after the 1st day of April next; but that all and every

person or persons who have already made surveys of any lands, or who shall make surveys of any land before the 1st day of April, may be at liberty to carry the same into a grant, on the payment of one dollar a hundred acres, as prescribed in the second enacting clause of this act.

DAVID RAMSAY, *President of the Senate.*

JACOB READ, *Speaker of the House of Representatives.*

IN THE SENATE, *February 19, 1791.*

AN ACT to extend the time for taking out of the secretary's office such grants of land as now lie in the said office.

Whereas by a clause of the act entitled "An act for establishing the mode of granting the lands now vacant in this State, and for allowing a commutation to be received for some lands that have been granted," passed on the nineteenth of February, in the year of our Lord one thousand seven hundred and ninety-one, it is enacted "that all grants of land in the secretary's office, and which should not be taken out within twelve months from the passing of that act, should be then sold to the highest bidder by the commissioners of the treasury;" and such lands have not yet been sold, and it is thought expedient to extend the time of sale still longer:

Be it therefore enacted by the honorable the senate and house of representatives, now met and sitting in general assembly, and by the authority of the same, That the sale of the said lands shall be postponed for twelve months and no longer; and that if any person shall, within that time, pay up the money due for the land, agreeably to the act for establishing the mode of granting lands now vacant in this State, and for allowing a commutation to be received for some lands that have been granted, together with the fees due on his grant, and the expenses incurred thereon, he shall be entitled to the said grant and the land thereby granted him, anything in the said clause of the said act to the contrary thereof in anywise notwithstanding.

DAVID RAMSAY, *President of the Senate.*

JACOB READ, *Speaker of the House of Representatives.*

DECEMBER 21, 1792.

AN ACT to close the land office for and during the term of four years, under certain limitations, and for other purposes therein mentioned.

Whereas a spirit of speculation and land jobbing hath gone forth, and many persons, greedy of gain, have embarked in such schemes, and have obtained, and still continue to obtain, large and excessive grants of land without any regard to their being granted, and even settled, and without distinguishing in the plats the numerous surveys included within the boundaries of their plats and grants, with a view to impose upon and deceive unwary foreigners by sales of such pretended vacant lands: and whereas no plan can be devised so effectually to check and defeat these iniquitous schemes as to shut up the land office, except for grants not exceeding five hundred acres, for a reasonable time:

Be it therefore enacted by the honorable the senate and house of representatives, now met and sitting in general assembly, and by the authority of the same, That from and immediately after the passing of this act the land office be and the same shall be so far closed for the term of four years that within that period no one person shall obtain more than one grant for land to be hereafter surveyed, which shall in no case exceed five hundred acres; and that no warrant of survey shall be issued by any commissioners of locations in this State for any number of acres exceeding five hundred acres, and not more than one such warrant to any one person during the aforementioned period of four years: *Provided always,* That nothing herein mentioned shall prevent any person from actually settling on vacant land; but bona fide settlers shall have liberty actually to survey, mark out, settle, and reside on any tract of vacant land not exceeding five hundred acres, and shall have a preference for a twelvemonth after the land office shall be opened to obtain a grant for the said survey.

And be it further enacted by the authority aforesaid, That where any warrants have been issued previous to the passing of this act, if any deputy surveyor, in locating them, shall knowingly and wilfully comprehend within the limits of any such location any plantation or tract of land before granted without noting the same; and if the said warrant shall be hereafter carried into grants, or where there are any grants for land now actually out, signed, and ready to be delivered; or where any plats are returned to the office of surveyor general, or secretary of the State, and shall be hereafter carried into grants, which plats or grants comprehend within their respective limits any plantation or tract of land before granted without the form being marked and noted, it shall be lawful for any of the proprietors of the plantations or tracts so before granted, or any other person interested therein, to bring his action of trespass against the grantee of the subsequent grant which comprehends the prior one, or any part thereof, his heirs or assigns, or any or all of them; and on his substantiating, by proof, to any district court and jury within whose jurisdiction the land lies, that his land or part thereof is actually comprehended in the subsequent grant a verdict shall be found in his favor, and the court shall declare the subsequent grant and every part thereof to be fraudulent and void to all intents and purposes, and the plaintiff shall recover such damages as the jury shall assess and treble costs of suit.

And whereas, since the passing an act entitled "An act for establishing the mode of granting the lands now vacant in this State, and for allowing a commutation to be received for some lands that have been granted," passed on the 19th day of February, 1791, divers grants of large tracts of land have been obtained, which included one or more surveys which have not been elapsed, the property of others, without taking notice of or designating the same in their plats, and without obtaining the consent of the said proprietors, and without their knowledge:

And whereas the lands in this State are so generally granted that no person could suppose that there were in this State such large bodies of vacant land, from which it appears that the intention of the aforementioned persons must have been to oblige the inhabitants who are settled within the boundaries and limits of the aforesaid plats to produce their titles, or, if they had lost them in the war, or by other accidents, to seize their lands as vacant, and, by producing such grants to unwary foreigners, may deceive them by the appearances of regularity and authority on the face thereof, and may involve them in pur-

chases ruinous to themselves and prejudicial to the credit and reputation of the State; in order, therefore, to prevent the alarm of the people, and the great litigation and numerous suits that may arise from the said unreasonable, excessive, and unlawful surveys and grant, and to prevent imposition on foreigners and citizens of this State:

Be it enacted and declared by the authority aforesaid, That the said surveys were made in violation of the instructions given to the deputy surveyors in this State; that the said grants have been obtained contrary to the intention of the legislature in establishing the mode of granting the lands now vacant in this State; that the governor must have been deceived when he signed the same; and that on its being proved, in the manner before enacted, to the satisfaction of any district court and jury within whose jurisdiction the land lies that such grants actually contained within their limits one or more settlements, the property of others under former surveys, without taking notice of or designating the same in their plats, and obtaining the consent (where such consent could have been obtained) to run the same, the court shall declare the said grants to be fraudulent, and the same shall be void to all intents and purposes.

And be it further enacted by the authority aforesaid, That every surveyor who shall have wilfully and knowingly violated the instructions of the surveyor general in not making out the boundary of all lands formerly granted, and which are within the survey by him or them made, shall be prosecuted by the attorney general and circuit solicitor of the respective districts, on proper application being made to either of them.

Whereas John Sloan and the Rev. John Monk and William Hill, junior, by their petitions to the legislature, have set forth that they had, at a considerable expense, erected a bloomery on South Edisto, in Edgefield county, for manufacturing of iron ore into bar iron: And whereas, under the existing laws of the State, and the regulations of this act, it is impossible for the said petitioners to run a sufficient quantity of vacant land to enable them to conduct and prosecute the said bloomery with advantage or effect, and it being an object of great national importance to encourage the manufacture of raw materials:

Be it therefore enacted by the authority aforesaid, That the commissioner of locations for the district of ninety-six be, and he is hereby, required and authorized to issue his warrants, one in behalf of John Sloan, for six thousand acres of land, and another in the joint behalf of said John Sloan, the Rev. John Monk, and William Hill, junior, for ten thousand acres of vacant land, the nearest to the said iron works, and that the said lands, so to be located, be granted to the said persons, anything in this act contained, or any law to the contrary thereof, in anywise, notwithstanding.

DAVID RAMSAY, *President of the Senate.*

JACOB READ, *Speaker of the House of Representatives.*

MAY 10, 1794.

AN ACT to extend the time of taking out of the secretary's office such grants of land as now lie in the said office, and for other purposes therein mentioned.

Whereas, by a clause of an act entitled "An act for establishing the mode of granting the lands now vacant in this State, and for allowing a commutation to be received for some lands that have been granted," passed on the nineteenth day of February, in the year of our Lord one thousand seven hundred and ninety-one, it is enacted "that all grants of land in the secretary's office, and which should not be taken out within twelve months from the passing of this act, should be then sold to the highest bidder by the commissioners of the treasury," and such lands have not been sold, and it is thought expedient to extend the time of sale still longer:

Be it therefore enacted by the honorable the senate and house of representatives, now met and sitting in general assembly, and by the authority of the same, That the sale of the said lands shall be postponed to the 15th day of December next, and no longer; and that if any person shall, before that time, pay up the money due for the land, agreeably to the act for establishing the mode for granting lands now vacant in this State, and for allowing a commutation to be received for some lands that have been granted, and the expenses incurred thereon, which expenses it is hereby declared shall not exceed five shillings for any one tract of land, he shall be entitled to the said grant, and the land hereby granted to him, anything in the said clause of the said act, or any such act or resolution of the legislature of this State to the contrary thereof, in anywise, notwithstanding: *Provided, however,* That nothing in this act shall be construed to authorize the taking out of grants for the excessive surveys of land which have been made since the first day of April, 1791.

And be it further enacted by the authority aforesaid, That ten commissioners be appointed by the governor in each circuit court district, who shall be required to return to the legislature, at their next meeting, an account of all such lands as have escheated to the State, agreeably to an act entitled "An act to appoint escheators and to regulate escheats," passed the 28th day of March, 1787, and that the reasonable expenses incurred by the commissioners appointed as aforesaid, in making the returns, be paid by the State.

DAVID RAMSAY, *President of the Senate.*

JACOB READ, *Speaker of the House of Representatives.*

MAY 10, 1794.

AN ACT to enable the United States to purchase a quantity of land in this State, not exceeding two thousand acres, for arsenals and magazines.

Whereas the late Secretary of State of the United States, in his letter to the late governor of this State, did request that he would take proper measures for obtaining the consent of the legislature of this State that the United States should purchase a quantity of land in this State whereupon arsenals and magazines might be erected:

Be it therefore enacted by the honorable the senate and house of representatives, now met and sitting in general assembly, and by the authority of the same, That the United States, or such person or persons as may

be by them authorized, shall have a right to purchase in any part of this State that may be thought most eligible, the fee simple of any quantity of land not exceeding two thousand acres, for the purpose of erecting arsenals and magazines thereon, agreeably to the act of Congress entitled "An act to provide for the erecting and repairing of arsenals and magazines, and for other purposes," passed on the 2d of April, 1794.

And be it further enacted by the authority aforesaid, That if the person or persons whose land may be chosen for the above-mentioned purpose shall not be disposed to sell the same, or if the persons appointed to make the purchase should not be able to agree upon terms with such owner or owners of the said land, the same shall be valued upon oath by a majority of five persons, to be appointed by the court of equity or court of common pleas of this State for that purpose; and the land shall be vested in the United States upon their paying the amount of such valuation to the owner or owners of such land.

And be it further enacted by the authority aforesaid, That the said land, when purchased, and every person and officer residing or employed thereon, whether in the service of the United States or not, shall be subject and liable to the government of this State, and the jurisdiction, laws, and authority thereof, in the same manner as if this act had never been passed; and that the United States shall exercise no more authority or power within the limits of the said land than they might have done previous to the passing of this act, or than may be necessary for the building, repairing, or internal government of the arsenals and magazines thereon to be erected, and the regulation and management of the same, and of the officers and persons by them to be employed in or about the same: *Provided, always, that the said land shall forever be exempt from any taxes to be paid to this State.*

DAVID RAMSAY, *President of the Senate.*

ROBERT BARNWELL, *Speaker of the House of Representatives.*

• DECEMBER 12, 1795.

AN ACT to authorize the secretary of this State to deliver out *grants of land* surveyed previously to the year one thousand seven hundred and ninety-two.

Whereas sundry inhabitants of this State have petitioned the legislature, setting forth that they are entitled to certain lands surveyed previously to the year one thousand seven hundred and ninety-two subject to the payment of a bounty, but for which the Secretary of State does not conceive himself at liberty to deliver out grants, and praying relief:

Be it therefore enacted by the honorable the senate and house of representatives, now met and sitting in general assembly, and by the authority of the same, That the secretary of this State be, and he is hereby, authorized and required to deliver out to the persons, their heirs or assigns, for whom surveys of land were made and duly returned previously to the 1st day of January, 1792, for any number of acres not exceeding six hundred and forty acres, grants of land so surveyed and returned as aforesaid, upon receiving from such persons, their heirs or assigns, the legal bounty and fees due for the same.

Provided, nevertheless, That this State shall in nowise be held to warrant to such grantees the lands so granted against the claims of others, or to refund any sum or sums of money which may be paid upon receiving such grants.

Provided, nevertheless, That whenever any grant, not exceeding six hundred and forty acres, shall be applied for previously to its being taken out, the person or persons who shall receive and take out the same shall, before the delivery thereof, declare on oath that the lands specified in the said grant or grants are truly and in reality applied for by the person or persons in whose favor the same is to be granted, or that the said land has been in part cultivated for one year, and that no person's name has been borrowed for obtaining the said lands.

And be it further enacted by the authority aforesaid, That the secretary of this State is hereby authorized to convey to Christian Faust a grant of six hundred and forty acres, being part of a grant to Thomas Cargill for nine hundred and twenty acres in Winton county, on payment of the bounty money and fees.

DAVID RAMSAY, *President of the Senate.*

ROBERT BARNWELL, *Speaker of the House of Representatives.*

DECEMBER 16, 1797.

AN ACT to alter and amend an "Act entitled 'An act for establishing the mode and conditions of surveying and granting the vacant lands within this State,' and for other purposes therein mentioned."

Whereas the act entitled "An act for establishing the mode and conditions of surveying and granting the vacant lands within this State" requires several alterations and amendments:

I. *Be it therefore enacted,* That all the lands mentioned and described in the first clause of the said act, which shall be surveyed by virtue of warrants hereafter to be issued, shall be granted and sold for ten dollars (instead of ten pounds) for every one hundred acres of the said lands, payable in indents.

II. Warrants for lands in Charleston district shall be granted by, and returned to, the surveyor general, in like manner as warrants for land in the other districts are granted by, and returned to, the commissioners of location in the said districts, respectively.

III. Grants shall be signed by the governor on the first Monday in every month. That the surveyor general may appoint as many deputy surveyors as he shall think proper, in each district, and which said deputy surveyors shall be confined to locate any warrant of survey to the respective districts of which they are or may be appointed, and no other; and that the 9th clause of said act be, and it is hereby, repealed.

IV. The first part of this clause repealed by act of assembly, October 12, 1785. That where any grant has been already, or shall hereafter be signed, without payment of the purchase money of the land granted, the land so granted shall not be subject to the debts, alienation, or disposition of the grantee, until the purchase money for the same shall have been actually paid; and that if the same shall not be paid within twelve months next after the date of the grant, the land shall be sold by the treasurer at public auction, after ninety days' notice in the State gazette of such sale, for the most money it will pro-

duce in indents. That the treasurers are hereby empowered to convey the said land to the highest bidder in fee simple, on the immediate payment of the price for which it shall be sold, and that the surplus of the money, if any, arising from such sale, shall be paid in indents (after satisfaction of the original price of the said lands, and interest thereon, with the expenses attending such sale from the date of the grant) to the grantee, his heirs or assigns, on applying to the treasurers for the same: *Provided*, That if, at the expiration of twelve months from the date of this grant, the person shall have an account in the auditor's office equal to the amount of the purchase money of the land, for a grant of which he applies, on his producing the auditor's certificate of such account, the governor may order the treasurer to suspend such sale for such time as to his excellency may appear reasonable; and that if no grant has been or shall be obtained for land within six months after the return of a plat of it into the surveyor general's office, the surveyor general shall certify the plat, and the governor shall sign a grant for the said land to any person who will apply for the same, and comply with the terms and conditions which the person for whom the said land was surveyed should have fulfilled, previous to the obtaining a grant for such land; that the secretary shall, at the end of every month, deliver to the treasurer a list of all grants which shall have been signed in the said month.

V. The surveyor general's office shall be kept in some convenient part of the State-house, and the surveyor general shall be entitled to the same fees for business done by him, with respect to land in Charleston district, as the commissioners of locations are entitled to for business done by them, with respect to lands in other districts; and the same allowance of land be given to the cavalry as was given to the infantry of this State.

VI. And whereas doubts have arisen concerning the fees allowed to officers upon the opening of the land office,

Be it therefore enacted, That it is not lawful for any other fees to be taken than such as are inserted in the act entitled "An act for establishing the mode and conditions of surveying and granting the vacant lands within this State," any law, usage, or custom to the contrary thereof, in anywise, notwithstanding.

VII. Caveats shall be determinable by the governor, or any two or more of the privy council. That witnesses being required by summons from the clerk of the privy council, by order of the governor, to attend on the hearing of caveats, shall attend accordingly, under the same penalties, and be entitled to the same allowance for attendance as witnesses in the court of common pleas, the said penalties and allowance to be recoverable in a summary way before a magistrate; and that the expense of the attendance of witnesses be paid by such of the parties as the governor, and any two or more of the privy council, in their discretion, shall think fit: *Provided*, That three commissioners for hearing caveats for lands, in each of the respective circuit court districts, shall be elected by ballot of the senate and house of representatives; the caveats for lands within the said district shall be heard by the said commissioners, respectively, or any two of them; and which said commissioners are hereby authorized and empowered finally to determine upon the said caveats; and before entering on their said offices the said commissioners shall take the following oath before some one justice of the quorum, to wit: I, A B, do swear (or affirm) that I will faithfully and impartially execute the office of justice of the court of caveats, so help me God. And the said commissioners shall hold a court of caveats on the first Tuesday in every month, in some convenient part within the district, at which time and place they shall cite the parties, with their witnesses, to appear; and in case of the non-attendance of either party, or the want of evidence, the cause shall be postponed for three successive hearings, and the same shall be determined at the third court after such citation hath been issued, and the said commissioners shall hear the parties by themselves, or by their attorneys; and when the case is finally determined the commissioners shall certify the same to the governor, or commander-in-chief for the time being, who shall sign the grant accordingly; and the said commissioners shall be entitled to receive a fee of nine shillings and four pence, and which fee shall be divided among them for their determination on each caveat, to be paid by the person who shall be cast.

VIII. Whereas disputes have arisen with respect to the boundaries of the 96th district,

Be it enacted, That from and immediately after the passing of this act the south branch of the Saluda river shall be deemed and taken as the division line between the said districts.

IX. Expired.

JOHN LLOYD, *President of the Senate.*

JOHN F. GRIMKE, *Speaker of the House of Representatives.*

MARCH 24, 1785.

AN ACT to alter and amend an act entitled "An act for establishing the mode and conditions of surveying and granting the vacant lands within this State." And another act entitled "An act to alter and amend an act entitled 'An act for establishing the mode and conditions of surveying and granting the vacant lands within this State,' and for other purposes therein mentioned."

Whereas an act of the general assembly, entitled "An act for establishing the mode and conditions of granting and surveying the vacant lands within this State," and an act entitled "An act to alter and amend an act entitled 'An act for establishing the mode and conditions of surveying and granting the vacant lands within this State,' and for other purposes therein mentioned," require alteration and amendment,

I. *Be it therefore enacted*, That the 10th, 11th, and 15th clauses of the act first above-mentioned shall be, and they are hereby, repealed. And whereas by the act last above-mentioned it is enacted in the words following, viz: that no grant for land shall in future be presented by the secretary to the governor to be signed until the grantee or some person in his behalf shall have produced to the secretary (who shall file and keep the same in his office) a certificate from one of the treasurers that the purchase money for the said land has been paid, or a certificate from the auditor general that the person in whose behalf application is made for the said grant has an account in the auditor's office, not passed, equal to the amount of the purchase money of the said land.

II. *Be it enacted by the authority aforesaid*, That as much of the said act as is above recited shall be, and the same is hereby, repealed.

And whereas several persons to whom lands have been granted have not as yet obtained indents from the treasurer to pay for such land, although some of them have accounts in the auditor's office not passed and others have accounts passed by the auditors and lying in the treasury equal to the amount of the

purchase money for the said land, and it is reasonable to allow a further time to the said grantees to pay for the said land,

III. *Be it therefore enacted*, That no land which has been granted since the passing of the act first above mentioned shall be sold by the treasurer for non-payment of the purchase money of such land until the first day of June next, anything in the act last above-mentioned to the contrary hereof, in anywise, notwithstanding.

IV. *And be it further enacted*, That a person making a survey of land shall be allowed six months from the time of making such survey to obtain a grant for the said land, and in default of obtaining a grant within that time, any person may at the expiration thereof apply for, and shall obtain, a grant for the said land on paying for it; and any grant obtained for land within six months from the time of its being surveyed, except by the person for whom it was surveyed, shall be, *ipso facto*, null and void.

JOHN LLOYD, *President of the Senate.*

JOHN F. GRIMKE, *Speaker of the House of Representatives.*

OCTOBER 12, 1785.

AN ACT for establishing the mode and condition of surveying and granting the vacant lands within the State.

I. Whereas the granting of the vacant lands of this State will be greatly conducive to its strength and prosperity by increasing the agriculture and population thereof,

Be it enacted, That all the lands lying and being to the northwest of the ancient boundary line heretofore established between the Cherokee nation of Indians and this State, running from Savannah river north 50° east to Reedy river and then due north until it intersects the North Carolina boundary, shall be granted and sold for the sum of £10 sterling for every 100 acres, in the manner and form and under the several regulations and restrictions hereinafter mentioned.

II. Any person or persons who have located lands within the ancient limits of this State on or before the 1st day of January, 1775, on warrants of survey legally obtained, and were prevented from procuring grants of the same by the abolition of the British government, or other good and sufficient causes which shall appear upon oath to be made before the commissioner of locations of the district where such lands were located, within six months after the passing of this act, shall be, and they are hereby, entitled to grants for the said lands; and that any persons who have settled vacant lands within the ancient limits of this State, and have been prevented by the aforesaid reasons from surveying and obtaining grants for the same, shall be, and they are hereby, entitled for the term of six months to the preference of the said settled land; and that all lands coming within the above description, and also all other vacant lands within the limits of this State, shall be granted and sold for the sum of \$10 per hundred acres.

III. A commissioner of locations shall be appointed in each circuit court district who shall take and receive the original entry of all vacant lands lying and being within the ancient boundaries of such districts (except for the district of 96, where two commissioners shall be appointed, one to reside on the north side of Saluda river and the other to reside on the south side of the same river, and which said river shall be the division line between the said two commissioners,) for which a warrant of survey shall be demanded, and shall thereupon issue such warrant of survey directed to some deputy surveyor authorizing and requiring him within two calendar months from the date of such warrant to lay off and locate the lands directed to be surveyed; which said warrant when executed, together with a true and correct plat of the survey, shall be received by the said commissioner, who shall make a fair record of the same, and within three months after such return shall transmit the original plat to the office of the surveyor general of the State for the time being, where the same shall be delivered.

IV. Each and every of the said commissioners of locations shall be appointed in the same manner as the surveyor general is by law to be appointed, and shall enter into bond for the faithful discharge of his duty, together with two good and sufficient securities, in the full and just sum of £10,000 sterling, payable to the treasurer of this State for the time being, in trust, and to and for the use of this State; and shall, also, at the same time, before some magistrate, take and subscribe the following oath: I, A B, do solemnly swear (or affirm) that I will well and faithfully execute the office of commissioner of locations for the district of ———, without giving a preference to any through favor, fear, or reward, according to the best of my skill and ability: so help me God.

V. The surveyor general of this State, on the return of the entry and plat of survey to this office from the office of commissioner of locations, shall make out a plat of the lands surveyed as aforesaid, and record and transmit the same, certified, to the office of the secretary of the State, who shall cause a grant to be prepared for the same, and the great seal affixed thereto; and shall, within three months thereafter, cause a fair record of all such grants to be made and kept in his said office, with alphabetical indexes; and on every third Friday in the months of January, April, July, and October, the said secretary of the State, on the said days respectively, shall lay before his excellency the governor for the time being all such grants by him prepared as aforesaid, who is hereby empowered and directed to sign the same, and thereupon to deliver them to the secretary of the State, to be delivered to the respective grantees or to their order: *Provided*, That, in all cases previous to signing of the said grants, where there shall appear to be any fraud or collusion in the progress of the said entry, warrant, and survey, the governor and commander-in-chief for the time being, and five members of the privy council, shall have full power and authority to cause all parties to appear before them, and without delay, in a summary manner, decide in such as to justice and equity shall pertain.

VI. The said surveyor general shall enter into bond for the faithful discharge of his duty, with two good and sufficient securities in the same sum, payable in the same manner, and shall also take and subscribe the same oath or affirmation before the secretary of this State, in the presence of his excellency the governor, as is hereinbefore prescribed to be entered into and taken by the several commissioners of locations to be appointed as aforesaid; which bond and oath or affirmation shall be thenceforth recorded in the secretary's office.

VII. The surveyor general shall have full power and authority to appoint such and so many deputy surveyors in each of the said districts as he may judge sufficient, not exceeding six for each district, for executing all such warrants of survey as shall be to them directed by the respective commissioners of

locations, for whose conduct in office the said surveyor general shall be responsible both to the State and the party aggrieved, anything herein contained to the contrary notwithstanding.

VIII. The said deputy surveyors of the respective districts shall take the same oath or affirmation of office on their appointment, and in the same manner as is hereinbefore prescribed to be taken by the commissioners of locations, before they shall be qualified to locate any warrant of survey, under the penalty of being forever disabled to act in the said office; and shall, also, within three calendar months from the date and delivery of all warrants of survey to them directed, well and faithfully locate and survey the same, and return a fair and correct plat thereof to the office of commissioners of locations, from whence the same had issued; and the said deputy surveyors are hereby required, authorized, and empowered, to administer the following oath to the chain carriers, to wit: I, A B, do solemnly swear (or affirm) that I will well and faithfully execute the employment of chain carrier, without favor or affection.

IX. Repealed by act of assembly, 24th March, 1785.

X. and XI. Repealed by act of assembly, 12th October, 1785.

XII. *On all creeks or rivers navigable for shipping or boats, whereon any vacant lands shall lie, the deputy surveyors shall be, and they are hereby, directed to lay off the same, by measuring four chains back from such river or creek, for every one fronting on and bounded by the same; and all surveys not made and regulated by this rule, and any grants which may be obtained thereupon, are hereby declared to be null and void, to all intents and purposes.*

XIII. All treasury indents of money due and payable by this State to individuals shall be, and they are hereby, declared to be a lawful tender at the treasury for so much money, in payment of all moneys accruing and to become due to this State for lands hereby directed to be sold, anything herein contained to the contrary notwithstanding.

XIV. The following fees, and no other, shall be demanded or taken by the secretary of the State, surveyor general, commissioners of locations, and deputy surveyors, who shall make out a table of the same, and keep posted up in some conspicuous place in their said offices; and each and every of the said respective officers, who shall demand or receive any greater or other fees than are allowed by this act, each and every such person shall be liable to an indictment for extortion, and, on conviction thereof, shall pay a fine of £100 sterling, one half to be paid to the prosecutor, and the other to the treasurer for the time being, for the use of the State.

Secretary of State's fee.

For making out the grant, recording the same, and fixing the great seal thereto, 10s. sterling.

Surveyor General's fee.

For every search, 1s. 2d. sterling.

Copy plat, 4s. 8d. sterling.

Recording and sending the same to the secretary's office, 7s. 6d. sterling.

Commissioners of Locations' fees.

For receiving applications, making entries, and granting warrants of survey, under hand and seal of office, 4s. 8d. sterling.

Receiving returns and recording plats, and transmitting the same to the surveyor general's office, 7s. sterling.

Deputy Surveyor's fees.

For surveying every acre, $\frac{1}{2}$ d. sterling.

Platting and returning the same, 11s. 8d. sterling.

For running of old lines for any person, or between parties, 14s. sterling per day.

XV. Repealed by act of assembly, October 12, 1785.

XVI. The said surveyor general hereby to be appointed shall not, during the time he is in office, on any pretence whatever, hold any other place or office of emolument under the United States in Congress assembled, or under the legislature of this State.

XVII. And whereas many persons have caused surveys of land lying beyond the Indian boundary to be made, which practice is not only founded in deception but contrary to the regulations heretofore established for taking up vacant lands:

Be it therefore enacted, That all grants and surveys passed or made for lands lying beyond the Indian boundary hereinbefore mentioned before the passing of this act shall be and are hereby declared to be null and void.

XVIII. The commissioners of locations in the several districts shall keep their respective offices at or near the centre of the district wherein he is commissioner, and shall give regular attendance every day, (Sundays excepted;) and no entry shall be made, or warrant given to survey any lands, until two months after the passing of this act, in which time the surveyor general shall appoint and qualify the several deputy surveyors respectively hereinbefore mentioned to be appointed: *Provided,* That nothing in this act contained shall extend to entitle any person or persons to lay warrants of survey, or receiving grants of land appropriated by the resolution of the legislature as a provision for the officers and soldiers of the continental line of this State, except such persons as are entitled thereto under the said resolution.

23^d CONGRESS.]

No. 592.

[2^d SESSION.]

ON THE INEXPEDIENCY OF ABOLISHING THE OFFICE OF MAJOR GENERAL OF THE
ARMY OF THE UNITED STATES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 13, 1835.

Mr. R. M. JOHNSON, from the Committee on Military Affairs, to whom was referred the resolution of the House of the 9th of December, directing them to inquire and report upon the expediency of abolishing the office of major general commanding in chief, and of providing for a fixed allowance, and for a reduction and more equitable distribution of the pay, rations, and emoluments of the general and staff officers of the army, reported:

That, in the year 1815, the army was reduced from a war to a peace establishment of ten thousand men, with two major generals and four brigadier generals, and other staff officers suitable to the establishment. In 1821 a further reduction took place, when one major general and two brigadier generals were retained, and a suitable staff. The number of regiments composing the present peace establishment is four of artillery, seven of infantry, and one of dragoons, exclusive of engineers and ordnance; making, in the whole, an aggregate of seven thousand one hundred and ninety-eight officers and men; and these regiments are at present only the skeleton of what they would be in case of war, when the number of men would be doubled. The proportion of general officers seems to be as few as is consistent with the greatest economy, and the organization is as perfect as could be desired for a peace establishment. There is one major general to command the whole army, and one brigadier general to each division of it. It does not appear to the committee that a less number of general officers could be assigned to such a force without endangering the military spirit of the army, as well as its discipline, which at present appears, from the reports of the President and the Secretary of War, to be highly satisfactory. The committee are, therefore, of opinion that the office of major general ought not to be abolished.

With regard to the equitable distribution of the pay, rations, and emoluments of the general and staff officers of the army, the committee do not see any objection to the present distribution of them. They have been settled by repeated legislation on the subject, and with a view to the circumstances connected with the duties required to be performed by the officers. The committee therefore beg leave to be discharged from the further consideration of the subject.

Pay and emoluments of the Major General of the Army.

The act of the 11th of January, 1812, section 6, fixes the pay of the major general at two hundred dollars a month, and fifteen rations a day; and the act of the 12th of April, 1808, section 6, estimates the ration at twenty cents.

The act of the 24th of April, 1816, section 12, fixes the allowance of forage for each horse, when forage is not drawn in kind, at eight dollars a month, the number of horses not to exceed the number authorized by existing regulations, which give to a major general seven.

The act of the 24th of April, 1816, section 12, provides that all officers be allowed for each private servant actually kept in service, not exceeding the number authorized by existing regulations, the pay, rations, and clothing of a private soldier, or money in lieu thereof. The regulations referred to fix the number of private servants for a major general at four.

The regulation of the 25th of August, 1812, gives the generals commanding separate armies double rations, founded, it is presumed, on the act of the 3d of March, 1797, section 4, which gives to the brigadier general while commander-in-chief, and to each officer while commanding a separate post, twice the number of rations to which they would otherwise be entitled; and on the act of the 16th of March, 1812, section 5, the regulations of the department allow to a major general six rooms as his quarters, one of which as a kitchen; and, when not furnished in kind, an allowance in lieu thereof of six dollars a room a month while on duty.

The same regulations allow, under the same circumstances, during five months of the year, one cord of wood per month to the major general, and two feet eight inches to his four servants; and, during the other seven months of the year, six cords of wood a month for the major general, and five feet four inches a month for his four servants; making in all fifty-two cords two feet and eight inches of wood a year, at five dollars a cord.

The pay and emoluments, then, of a major general per year are as follows:

Pay	\$2,400 00
Subsistence	1,095 00

He is, besides this, allowed as follows:

For four servants, provided he actually keeps them, and does not employ soldiers from the line, each the pay and emoluments of a private soldier.....	\$700 00
Forage for seven horses, provided he actually keeps them in service, at eight dollars a horse per month.....	672 00
Quarters and fuel, provided he is on duty, and they are not furnished in kind....	698 66
	2,070 66
Double rations while in command of the army.....	1,095 00
	6,660 66

It will be seen by the foregoing statement that the items of servants, forage, fuel, quarters, and double rations, are contingent allowances, and that there is no emolument derived from them; that a general cannot do his duty without horses and servants. The horses are purchased at his own expense, and eight dollars a month a horse will not pay the expense of his keeping.

WAR DEPARTMENT, *December 24, 1834.*

SIR: In conformity with your request, I have the honor to transmit a report showing the pay and emoluments of all descriptions appertaining to the office of major general commanding the army by the laws and regulations now in force.

You request me to submit to you any views concerning that office which may occur to me. I am not aware that anything which I can say on the subject will be useful to the committee; but I still think it proper that I should lay before you the ideas which have occurred to me.

In 1815 the army was reduced from the war to a peace establishment, and two major generals were retained. In 1821 it was still further reduced, and only one major general retained. In that condition it has remained until the present period.

Two great objects were held in view in these reductions. One was to preserve such a force as might be necessary to garrison our seaboard, and to afford adequate security to our inland frontier. The other was to continue such an organization as would readily admit of a proper extension in the event of the occurrence of any difficulties rendering an increase necessary. The present organization seems to have attained these objects. The army is efficient without being too numerous, and the military arrangements are such that new troops may be engrafted upon it, and the benefit of experience preserved, without those losses and delays which inevitably occur where new forces are suddenly embodied.

I consider the office of major general essential to the unity of command. He is stationed at this city to superintend and direct those parts of the administration of the army which are strictly military in their character, and which, to be properly conducted, require not only the advantage of military experience, but of a military connexion with the army. If the office of major general should be abolished, and but two brigadier generals retained, they must either remain in command of separate districts, and this department thus be deprived of the assistance and advice of an officer of high rank in the management of those concerns which peculiarly affect the army, or one of them must be stationed here exercising an authority over the whole service. The latter arrangement would certainly be liable to objection, and would be inconsistent with the established principles of the military service. These principles look to the union of separate bodies or corps under one individual. Companies are united into battalions, battalions into regiments, regiments into brigades, and brigades into divisions, and an officer is placed at the head of each of these bodies charged with its general concerns, and responsible for them. This point of union I consider proper, if not essential. The principle has heretofore been preserved, and I should regret to see it departed from.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. R. M. JOHNSON, *Chairman Committee on Military Affairs, H. R.*

P. S.—The resolution enclosed by you is herewith returned.

23D CONGRESS.]

No. 593.

[2D SESSION.]

ON THE EXPEDIENCY OF REPAIRING THE FORTIFICATIONS IN THE HARBOR OF BOSTON,
MASSACHUSETTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 13, 1835.

WAR DEPARTMENT, *January 12, 1835.*

SIR: In conformity with the resolution of the House of Representatives of the 8th instant, I have the honor to transmit a report from the chief engineer, communicating the information called for.

The resolution requiring my opinion upon the expediency of executing the repairs proposed in the report of the board of engineers, I beg leave to remark that that document, together with the first report of the board, furnishes all the information in my possession upon this subject. Looking at these, I am satisfied that the defences of the harbor of Boston cannot be rendered complete without the repairs contemplated. But the proper time for doing this is a subject exclusively for the consideration of Congress.

The security of Castle island from the effects of the sea is highly important; and should Congress think proper to restrict the operations to that object, the sum of eight thousand dollars, which is asked for, in addition to the amount now on hand, will be sufficient. Should they, however, decide that the reconstruction of the fort is now necessary, then an appropriation of about one-third of the sum estimated for by the engineer board will be necessary.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. JOHN BELL, *Speaker of the House of Representatives.*

ENGINEER DEPARTMENT, *January 10, 1835.*

SIR: In compliance with the resolution of the House of Representatives of the 8th instant, I have the honor to hand you herewith the report and estimate of the board of engineers for repairing Fort Independence, in the harbor of Boston.

The report and estimate contain all the information on the subject which can at this time be furnished. It may, however, be proper to state that Fort Independence is an important part of the defensive system adopted by the board of engineers for the protection of Boston harbor. The work is old and in a dilapidated condition. To repair it properly would amount almost to a reconstruction, as all its masonry requires to be rebuilt; its parapets, ramps, and slopes to be reformed, and its gateways, posterns, and traverses renewed. The island on which it is situated is much exposed to the easterly storms which prevail on that section of the coast, and is liable to great injury from the encroachments of the water upon it. It is covered on the southeast by a stone wall, and was formerly protected on the northeast by a wharfing of timber; the latter, however, having decayed, that part of the island is again exposed, and it is proposed to cover it by the construction of a permanent wall. An estimate of the repairs required upon the island was made by a board of officers in 1831; but, owing to the impossibility of commanding the services of an officer of engineers to execute them until within the year 1833, this estimate was found to be insufficient, owing principally to the rise in the prices of the materials to be used. Another estimate was made within 1833, based upon what was supposed would be the average prices during the continuance of the work, and on the supposition, as in the former estimate, that the present plan of the work, in all its parts, would be retained. The first was \$36, 173 06, and the latter \$56, 094 80. It having been determined to convene the board of engineers in the fall of 1833 for the revision of several new works, it was deemed advisable to bring before it the condition of Fort Independence; and the report on that work, herewith submitted, is the result of their deliberations on the subject. It will be perceived that the board recommend certain additions and improvements to the work as originally designed. These additions the position of the fort in reference to the other points to be occupied for the defence of the harbor and city of Boston renders necessary, especially as it must be occupied in time of war, not only for the purposes of general defence, but also as a general depot for stores and recruits, and for the establishment of military hospitals.

I am, sir, very respectfully, your obedient servant,

C. GRATIOT, *Chief Engineer.*

HON. LEWIS CASS, *Secretary of War.*

(For other documents and estimates, see antecedent No. 573.)

23D CONGRESS.]

No. 594

[2D SESSION.]

ON THE SUBJECT OF A COMPROMISE OF TITLE WITH THE CLAIMANT TO PEA PATCH ISLAND, IN DELAWARE RIVER, ON WHICH FORT DELAWARE STANDS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 23, 1835.

Mr. THOMSON, of Ohio, from the Committee on Military Affairs, to whom were referred the messages of the President of the United States of the 19th of February, 1831, and the 20th of January, 1832, recommending that provision be made by Congress to carry into effect a compromise of the title of the claimant of the island in the river Delaware, called "The Pea Patch," on which Fort Delaware is constructed, reported:

That Doctor Henry Gale, of the city of New York, many years since, claimed title to the said island, and instituted judicial proceedings to establish his claim against the United States. These proceedings had been long depending in the courts, when, on the 18th February, 1831, an agreement in writing was entered into between the agent and attorney of Doctor Gale and the Secretary of War, by which Doctor Gale was to surrender up all title to said island to the United States for the sum of seventeen thousand dollars, which was to be paid when the government was satisfied that the title of said Gale was valid.

The President of the United States immediately transmitted the agreement to Congress, in order that an appropriation might be made to enable the Department of War to carry it into effect. On the 21st February, 1831, a bill was reported to the House which provided that when it should be ascertained that the title to the Pea Patch was not in the United States, the Secretary of War was directed to enter into a contract with the person in whom the title should be found to be vested, to pay the value of said island, with the damages for its occupation by the United States, as found and assessed by the verdict of a jury. This bill was not acted upon during the session, which closed in a little more than a week after it was reported.

At the succeeding session of Congress, on the 20th January, 1832, the President of the United States again brought the subject before the House by special message, and urged that provision be made to give effect to the compromise agreed upon on the 18th February, 1831. On the 1st of February following a bill was reported to carry the compromise into effect, but the bill was not acted upon during the session, and the subject has not been touched in the House since that time.

Congress having failed, for two sessions, to make any provision for giving effect to the proposed compromise, the parties conceived the stipulations which had been entered into between the Secretary of War and the agent of Doctor Gale, the claimant, as no longer binding, and the proceedings in the judicial tribunals were resumed.

By letter dated March 2, 1833, from the attorney of the claimant, addressed to the Secretary of War, it appears that the Secretary contemplated carrying into effect the original agreement, out of the appropriation then about to be made for the repairs of Fort Delaware, and the agent makes inquiries as to the course which it was the wish of the government to pursue.

On the 26th of March, 1833, General Gratiot, the chief of the Engineer department, answered the attorney that the government had determined to purchase the title of the claimant if the Attorney General should be of opinion it was valid, and requested the claimant to come to Washington prepared to execute the original agreement. The agent came to Washington, but as Congress provided no funds for the purchase, he declined to renew the agreement of February 18, 1831, and returned to New York.

On the 23d November, 1833, the claimant proposed to the Secretary of War that if he would undertake to procure, during the then approaching session of Congress, the original sum offered, (\$17,000,) with interest from the date of the agreement, he was still willing to carry into effect the said agreement.

The Secretary of War immediately transmitted to the United States attorney for the State of New Jersey all the papers in the case, together with the last offer of the claimant, and requested the advice of the attorney as to whether it would be advisable to accept the compromise offered, or to let the case pursue its course to a legal termination.

On the 2d December, 1833, the district attorney of New Jersey answered the Secretary of War that it was his opinion that the title of the claimant was valid, and that he would ultimately recover against the United States, and he advises that the compromise offered by Doctor Gale be accepted by the United States. He promises to make a full brief of the case, and to transmit it to the Secretary thereafter, to enable the Attorney General of the United States to determine the propriety of executing the agreement of compromise.

The Attorney General, having examined the brief and papers in the case, informed the Secretary of War, on the 31st December, 1833, that there would seem to be much reason for contending that the title to the island in question was in Doctor Gale, the claimant, but declined, from the documents then before him, to give a decisive opinion; he also says that the documents, however, sufficiently show that the title of the United States is a doubtful one.

On the 9th June, 1834, the attorney of the United States for the district of New Jersey transmitted to the Secretary of War the brief in the case promised in his letter of the 2d December, 1833. This brief was immediately handed over to the Attorney General, who, on the 16th June, 1834, again reports to the Secretary of War that, upon the facts disclosed, and the opinion of the district attorney, he should have little difficulty in coming to the conclusion that the title to the island in question was, in 1831, in the State of New Jersey, and that by the act of the legislature of that State, of the 24th November, 1831, it was vested in Henry Gale, the claimant. The Attorney General again declined to give a *positive* opinion, but said he had no doubt as to the expediency of extinguishing the claim of Mr. Gale, if it could be done on reasonable terms.

The Secretary of War, on the 17th June, 1834, immediately upon receiving the last communication from the Attorney General, addressed a letter to the chairman of the Committee of Ways and Means of the Senate, expressive of his opinion of the propriety of forthwith extinguishing the title of Doctor Gale, and requested that an appropriation of \$20,000 for that object should be inserted in the bill then pending making appropriations for fortifications for 1834.

It thus appears, from the official documents which accompany this report, that it has been the constant desire, since February, 1831, to extinguish the claim of the present claimant to this island, which it is so vitally important that the United States should possess; and the only obstacle which has interposed to prevent it has been the want of an appropriation for that purpose. Congress have not acted upon the subject further than to report bills which have remained upon the files unacted upon. Every year's delay adds to the amount to be paid, as the claimant insists that if he now executes the original agreement, interest must be paid for the delay; and the papers which accompany this report show that the *claimant himself* contemplated a much larger sum, but was compromised by the *unadvised act* of his agent.

Under all the circumstances of the case, the committee believe that the interest of the public will seriously suffer by further delay; they therefore report a bill conformably to the agreements of the parties as expressed in the documents in the case.

(For message of the President of February 19, 1831, see antecedent No. 478.)

(For message of the President of January 20, 1832, see antecedent No. 501.)

(For message of the President of March 27, 1822, see Vol. II on Military Affairs, No. 224, page 376.)

(For message of the President of February 24, 1824, see same volume, No. 253, page 624.)

Agreement, dated February 18, 1831, for	\$17, 000 00
Interest, according to subsequent agreements between the Secretary of War and the claimant, four years, at six per cent.	4, 080 00
	<hr/>
Amount due on February 18, 1835.	21, 080 00
	<hr/> <hr/>

NEW YORK, March 2, 1833.

SIR: I had the honor a few weeks since of an interview with you on the subject of the claim of Dr. Gale on the island on which Fort Delaware is now situated. You then informed me that, in case the bill then pending in Congress on that subject should not pass this session, the claim would be extinguished out of the appropriation to be made for rebuilding the fort.

As Congress has now adjourned, I take the liberty of addressing you for instructions as to what preliminary steps will be required of the claimant. To whom shall he present the documents establishing his title? Will it be necessary for him or his agent to visit Washington to make the conveyance? By so doing, can the whole arrangement be concluded?

The justice of the claim, and the great solicitude of the claimant to terminate in some way a matter which he has been urging nearly twenty years without success, will, I trust, be a sufficient apology for pressing it upon your early attention.

With the highest respect, I have the honor to be your most obedient servant,

WILLIS HALL.

His Excellency LEWIS CASS, *Secretary of the War Department, Washington.*

ENGINEER DEPARTMENT, Washington, March 26, 1833.

SIR: In answer to your communication of the 2d instant, addressed to the Secretary of War, on the subject of Dr. Gale's claim to the Pea Patch island, on which Fort Delaware is situated, I am instructed to inform you that the government has determined to purchase that island from Dr. Gale, provided his title to the same shall prove, on examination by the Attorney General of the United States, to be good. Should the views, therefore, of the claimant as to the compromise heretofore offered by him remain unchanged, he is requested to come to this place in person, or to send an agent duly authorized to sell his title to the island, subject to the approval of Congress at its next session.

I am, sir, very, &c.,

C. GRATIOT, *Brigadier General.*

WILLIS WALL, Esq., (or HALL,) *Agent of Dr. Gale, New York.*

NEW YORK, November 23, 1833.

SIR: I am instructed by my constituents to say that if the Secretary of War will undertake to procure during the next session of Congress the original sum offered (\$17,000) for the Pea Patch island, *with interest* from the date of said original offer, an arrangement to that effect may be made.

Should the Secretary be disposed to make such an arrangement, I will visit Washington immediately for the purpose of making it, if necessary.

The parties hope for an early reply, which, if in favor of the above proposition, I shall immediately direct the legal proceedings heretofore instituted to recover the island to be suspended until the result of another application to Congress is known.

With great respect, I have the honor to be your obedient servant,

WILLIS HALL, *Agent for the Claimants.*

HON. LEWIS CASS, *Secretary of War.*

DEPARTMENT OF WAR, November 26, 1833.

SIR: I have the honor to enclose herewith the following papers, to wit:

A letter from the Secretary of War to the President of the United States, relating to the Pea Patch island, dated February 18, 1831.

The agreement between the agent of H. Gale and the Secretary of War, referred to in the preceding, and of the same date.

A letter from Willis Hall to the Secretary of War, dated March 2, 1833.

A letter from the Engineer department to Willis Hall, dated March 26, 1833.

A letter from Willis Hall to the Secretary of War, dated November 23, 1833.

You will perceive, by the last named, that the attorney for the claimants of the Pea Patch proposes to suspend the legal proceedings heretofore instituted to recover the island in the event of the arrangement proposed by him in the same communication be acceded to. The object in addressing you now is to obtain your advice in the matter as to whether it would be advisable to accept the compromise offered, or to let the case pursue its present course to a legal termination. The other papers are sent that you may be advised of the course pursued by this department. In accordance with the suggestion in the letter from the Engineer department of the 26th of March last, the agent visited Washington, but finding that Congress had made no provision of funds for the purchase, declined to renew the agreement made with Mr. Eaton when Secretary of War. Since the visit of that gentleman, you are aware of the course pursued by the claimants.

I am, sir, respectfully, your obedient servant,

LEWIS CASS.

G. D. WALL, Esq., *United States District Attorney, Burlington, New Jersey.*

BURLINGTON, *December 2, 1833.*

SIR: I had the honor of receiving your favor of the 26th ultimo, with the enclosures therein referred to.

I have heretofore had the honor of submitting my opinion in respect to the title of Dr. Gale to the Pea Patch. I think that his title is valid, and that he must ultimately recover against the United States. As far as I have been able to investigate the title, that held by the United States under the grant of Delaware is invalid. Delaware at the time of the grant had neither possession, right of possession, title, nor jurisdiction over the island. It lies within the jurisdiction of New Jersey. It is my opinion that the United States had better accept the compromise offered. I will, as soon as I can collect the materials, send you a brief of the titles to the island under the State of Delaware and under the State of New Jersey. This brief will enable the Attorney General at once to determine the propriety of compromising. I shall be able to forward the brief before the 1st of January.

I have the honor to be, sir, with great respect, your obedient servant,

GARRET D. WALL, *Attorney of United States, New Jersey District.*

HON. LEWIS CASS, *Secretary of War, Washington.*

ATTORNEY GENERAL'S OFFICE, *December 31, 1833.*

SIR: I have perused the brief, and examined the accompanying papers, referred to in your communication of the 28th instant, on the subject of the title to the Pea Patch island, in the Delaware river. From the documents cited and the facts alleged in these papers, there would seem to be much reason for contending that the title to this island is in the claimant under the colony and State of New Jersey; but I find it impossible, in the present state of the case, and on the evidence before me, to give a decisive opinion on this point. It seems that when the government took possession of the island it was claimed by the State of Delaware, and that the United States entered under a grant from that State, whose title to it was then, and has been since, strongly supported by the opinions of several eminent jurists. The documents submitted to me are sufficient to show that the title derived from the State of Delaware is a doubtful one, but this is all that I now feel myself authorized to say.

I have the honor to be, very respectfully, your obedient servant,

B. F. BUTLER.

HON. LEWIS CASS, *Secretary of War.*

The papers are herewith returned.

NEW YORK, *January 16, 1834.*

SIR: I have the honor to enclose you a letter from James La Tourrette, former agent of Dr. Gale, in reply to some inquiries respecting his contract with the late Secretary of War for the sale of the Pea Patch island. I submit it for the purpose of showing the propriety of the offer made by me in my communication of the 23d November last. In my letter of that date I offered to dismiss the suit now pending, and make satisfactory conveyances of the island for \$17,000, the original offer, and interest from the date of the offer, equal to \$20,000. My object was to make an offer as favorable to the government as the one originally made by Mr. La Tourrette.

On the 17th of December last I received a letter from General Gratiot, of date of 15th, informing me that G. D. Wall, esq., to whom my letter had been referred, had reported favorably of the title of Dr. Gale, and promised "to submit the facts on which his opinion is founded for the examination of the Attorney General." The letter concludes as follows: "I am, in consequence, directed by the Secretary of War to say to you that the proposition made in your letter above referred to will be acceded to, provided the opinion of the Attorney General shall be in accordance with that of Mr. Wall."

In consequence of this letter, I repaired to Washington with the documents requisite to establish Dr. Gale's title. I should not have incurred the expense and loss of time, but for the letter from General Gratiot, in which I am informed that "my proposition will be acceded to in case the title is approved by the Attorney General." With this impression, I was much surprised, the morning I left Washington, by being informed by General Gratiot that everything could be arranged at once, provided I would take \$17,000. I had supposed everything was arranged but the title, that the terms were settled, and had so informed my principals. I could not accept this new proposition without again referring to my principals for instructions. One of them, most interested, lives in Illinois, and some weeks must elapse before he can be heard from.

Let me again urge the proposition contained in substance in my letter of the 23d of November, which is to convey the title for \$20,000. The moderation of this offer will commend it to your sense of justice; it is the same, in effect, as the one accepted by your predecessor; it is less in fact to the claimants, for heavy expenses incurred in prosecuting the claim, and in procuring the title of the *State of New Jersey*, (which was not in Dr. Gale when the contract was made with Major Eaton,) are now to be deducted from the sum received. It is true that \$17,000 would not pay the sum expended by Dr. Gale since 1815 in prosecuting this claim. It is not the interest of the government to deprive any citizen of his just rights, and such a result, I am confident, would be deprecated by no one more than by yourself. I only ask for the claimants your frank, unbiassed consideration of their claim.

If you have doubts as to the propriety of giving a larger sum than \$17,000, I am willing to make a conveyance of the title for that sum, and appeal to Congress for a further compensation for *mesne profits*. After the title is conveyed, it will, of course, be optional with Congress to give anything in the name of *mesne profits* or not. Perhaps this course will obviate all difficulties. It is one which my principals formerly intimated their readiness to adopt. I respectfully suggest it for your consideration.

With great respect, I have the honor to be your obedient servant,

WILLIS HALL.

Hon. LEWIS CASS, *Secretary of War*.

NEW YORK, *January 16, 1834.*

DEAR SIR: Relative to the inquiries concerning my contract with Major Eaton, late *Secretary of War*, I will answer—

1st. The demand I was to make was \$30,000, allowing but \$10,000 for insulting Doctor Gale and his people, in driving them unceremoniously from the island, tearing down their fishing houses, &c.

2d. From Major Eaton's own suggestion, I was induced to say what I would take from an individual, *cash paid in hand*, rather than the delay of a probable lawsuit.

I reflected, the long time, and the cares attending a lawsuit, I would take \$17,000 *cash, and be at peace with government*. Honorable to Major Eaton, he instantly made the contract the next day. The President of the United States sent a message to the Senate, and it was approved, and passed unto a committee, and there it has remained.

3d. I would not have taken \$17,000 had I expected it would have been delayed until now, nor \$25,000.

I am your friend and obedient servant,

JAMES LA TOURRETTE.

WILLIS HALL, Esq.

BURLINGTON, *June 9, 1834.*

SIR: I have the honor of sending herewith the papers which were furnished to me by the War Department, in relation to the Pea Patch. I also send a brief of the title of Dr. Gale to the Pea Patch, and of the State of Delaware to the same.

I am under the necessity of throwing myself on the indulgence of the department for not sending these papers at an earlier day. I had given the papers confided to me by the department to a young gentleman in my office to copy, and he went off to Alabama without making the copies, and without returning them to me; and it became necessary for me to write to him, and wait for his answer. He had placed them in the office out of the appropriate place, and, in order to find them, it became necessary to make a search through papers which had accumulated for upwards of thirty years' extensive practice. I was fortunate enough to find them last week, and immediately entered upon the duty of preparing the enclosed brief. This was a work of some labor, and more research; and I hope will enable the Attorney General to make up an opinion without much labor.

I have the honor to be, sir, with great respect, your obedient servant,

GARRET D. WALL, *Attorney United States, New Jersey District.*

Hon. LEWIS CASS, *Secretary of War, Washington.*

In the third circuit court of the United States for the New Jersey district.

JOHN DEN, EODEN HENRY GALE,
vs.
HENRY BEALING, BENJAMIN COOPER, JOHN JEFFERSON, JOHN GARNER, JOHN CORKRIN, and
WILLIAM LONG.

In ejectment for three hundred acres of land situate in the township of Lower Penn's Neck, in the county of Salem and district of New Jersey, commonly called the Pea Patch.

The ejectment in this case was returned to the term of October, 1833, and issue is joined.

The title of the plaintiff (with which I am familiar) is as follows:

* King Charles II, by patent dated March 12, 1664, for the consideration therein mentioned, did give and grant unto his brother James, Duke of York, his heirs and assigns, "all that part of the main land of New England, beginning at a certain place known by the name of St. Croix, next adjoining to New Scotland, in America, and from thence extending along the sea-coast unto a certain place called *Pettuaguine*, or *Pemaquid*, and so up the river thereof to the furthest head of the same as it tendeth northward, and extending from thence to the river of Kenebeque, and so upward by the shortest course to the river of Canada northward. And also all that island or islands commonly called by the several name or names of

^o Paterson's Laws of New Jersey, Appendix 1. Grants and concessions, and original constitutions of New Jersey, by Aaron Learning and Jacob Spicer, pages 3 and 4.

Matowacks, or Long Island, situate, lying, and being towards the west of Cape Cod, and the narrow Higansets, abutting upon the main land between the two rivers there, called or known by the several names of Connecticut and Hudson's river, together also with the said river called Hudson's river, and all the lands from the west side of the Connecticut to the east side of Delaware bay. And also all those several islands called or known by the names of Martin's Vineyard and *Nantukes*, or otherwise *Nantukett*. Together with all the lands, islands, soils, rivers, harbors, mines, minerals, quarries, woods, marshes, waters, lakes, fishings, hawkings, huntings, and fowlings, and all other royalties, profits, commodities, and hereditaments to the said several islands, lands, and premises belonging and appertaining, with their and every of their appurtenances; and all our estate, right, title, interest, benefit, advantage, claim, and demand of, in, and to the said lands and premises, or any part or parcel thereof; and the reversion and reversions, remainder and remainders, together with the yearly and other the rents, revenues, and profits of all and singular the premises, and of every part and parcel thereof. To have and to hold all and singular the said lands, islands, hereditaments, and premises, with their and every of their appurtenances, hereby given or granted, or hereinbefore mentioned to be given and granted unto our dearest brother James, Duke of York, his heirs and assigns, forever."

This patent also grants the powers of government, &c., *in extenso*, over the premises granted.

* James, Duke of York, by deeds of lease bearing date June 23, 1664, and release bearing date the 24th June, 1664, for the consideration therein mentioned, did grant, bargain, sell, release, and confirm unto *John Lord Berkeley* and Sir George Carteret, their heirs and assigns, forever, "all that tract of land adjacent to New England, and lying and being to the westward of Long Island and *Manhitas* island, and bounded on the east part by the main sea and part by Hudson's river, and back upon the west Delaware bay or river, and extending southward to the main ocean as far as Cape May, at the mouth of Delaware bay; and to the northward as far as the northernmost branch of the said bay or river of Delaware, which is forty-one degrees and forty minutes of latitude, and crosseth over thence in a straight line to Hudson's river, in forty-one degrees of latitude, which said tract of land is hereafter to be called by the name or names of New Cæsarea, or New Jersey. And also all rivers, mines, minerals, woods, fishings, hawkings, huntings, and fowlings, and all other royalties, profits, commodities, and hereditaments whatsoever to the said lands and premises belonging, or in anywise appertaining, with their and every of their appurtenances, in as full and ample manner as the same is granted to the said Duke of York by the before-recited letters patent; and all the estate, right, title, interest, benefit, advantage, claim, and demand of the said James, Duke of York, of, in, and to the same, or any part and parcel thereof, and reversion and reversions, remainder and remainders thereof."

Under this deed John Lord Berkeley and Sir George Carteret entered into possession of the premises, and colonized the State.

Up to the time of the grant, and for some time after, New Jersey was in possession of the Dutch, who held New York and New Jersey under the title of *New Netherland*.

† Colonel Richard Nicolls, Sir Robert Carr, and Samuel Maverick were sent out with a fleet to put the Duke of York in possession. Nicolls's commission bears date April 2, 1664.

In September, 1664, the Dutch surrendered New York to Nicolls, and on October 1, 1664, Newcastle, and all the possessions of the Dutch and Swedes on Delaware bay and river, to Sir Robert Carr, who entered the Delaware with his ships.

In the summer of 1665 Captain Philip Carteret, who was the first proprietary governor of New Jersey, arrived with several settlers, who received grants under Berkeley and Carteret, and began the first English settlement of New Jersey.

In 1672 New York surrendered to the Dutch, who, under Commodores Cornelius Everye and Jacob Benkes, conquered the fort at New York.

‡ The people of New Jersey sent deputies to New York, and swore allegiance to the States General and the Prince of Orange, and the governor of the Duke of York returned to England.

On the 9th of February, 1674, the treaty of peace between England and the States General was signed at Westminster, by which New York and New Jersey were restored to the English.

In order to remove all doubts as to the will of the Duke of York and his grantees, by reason of the conquest from and by the Dutch, and cession made by the Dutch to the English by the treaty of the 9th of February, 1674, § King Charles II, by letters patent dated June 29, 1674, granted to the Duke of York the State of New Jersey in the same manner and by the same description as he had previously granted the same. ¶ Previous, however, to this patent, King Charles II, by letters patent dated June 13, 1674, acknowledged the rights of the proprietors of New Jersey and their powers of government.

On the 29th July, 1674, the Duke of York, by deed of that granted, &c., to Sir George Carteret, East New Jersey, in the same manner as before granted to John Lord Berkeley and Sir George Carteret. ¶ On the 18th of March, 1673, John Lord Berkeley conveyed his moiety of New Jersey to John Fenwick.

** By deeds dated February 9, 1674, and February 10, 1674, Edward Byllynge, William Penn, Gawn Lawry, and Nicholas Lucas, became seized of John Fenwick's moiety.

By deed of division, bearing date July 1, 1676, New Jersey was divided into East and West New Jersey; East New Jersey being allotted to Sir George Carteret, and West New Jersey to Edward Byllynge, William Penn, Gawn Lawry, and Nicholas Lucas.

On 7th November, 1743, the council of proprietors of West New Jersey, by warrant of that date, directed their surveyor general to survey to Samuel Atkinson and wife six hundred acres of unappropriated land anywhere in the western division of New Jersey, below the falls at Trenton.

April 6, 1744, Samuel Atkinson and wife conveyed the whole of the said warrant to John Robbins, by deed of that date.

October 6, 1784, Elias Robbins, eldest son and heir-at-law of John Robbins, conveyed to Edward Hall fifty-two and a half acres, and half a tenth of said warrant.

August 7, 1782, the council of proprietors of West New Jersey, by warrant of that date, directed their surveyor general to survey to Daniel Ellis 5,000 acres of unappropriated land anywhere in the western division of New Jersey.

§ *Ibid.*, 41.

¶ *Ibid.*, 49.

¶ *Ibid.*, 64.

¶ *Ibid.*, 65.

Daniel Ellis, by deed dated August 8, 1783, conveyed to John Lawrence 600 acres of said warrant.

September 1, 1784, John Lawrence conveyed to Clement Hall and Edward Hall 126 acres of said warrant

By virtue of the above warrants, on the 8th October, 1784, Edward Hall and Clement Hall caused a survey to be made on the island in the river Delaware, in the county of Salem, in New Jersey, called the Pea Patch, thus described:

An island in the river Delaware, called the Pea Patch, situate in the county of Salem, about one mile west from Ferr's Point, in Penn's Neck, and is about west of the mouth of Salem creek, and a little above Reedy Point; also nearly southeast and by east from Hamburg about two and a half miles, and about south one and a half point west from the Tile house at Newcastle, distant about four and a quarter miles, and bounded, &c., containing 178 acres of marsh land, bank, and mud flats, and allowance for roads.

The survey was made by Elnathan Davis, a deputy surveyor of the surveyor general, and the return is dated October 27, 1784.

On the 3d November, 1784, it was approved by the board of proprietors, and ordered to be recorded, and recorded accordingly.

This deduction of title is perfect according to the laws of New Jersey, and vests in the said Edward Hall and Clement Hall all the title derived from the grant made by the King to the Duke of York in the premises in question.

Edward Hall and Clement Hall entered on the island at the time of the survey, and it was staked out, and they took possession as far as it was capable of possession.

The Pea Patch is an island which has arisen within memory. It appeared first about sixty or seventy years ago, and arose from the sinking of a vessel loaded with peas, and thus acquired its name. By gradual alluvions and deposits it has assumed its present state.

Shortly after the survey the Halls rented the island to one John Mugway for twelve dollars and fifty cents, or fifty muskrat skins, per annum, and he paid the rent for two years.

The Halls possessed the island during the lifetime of Clement Hall.

In December term, 1811, the administrators of Clement Hall applied to the orphans' court of the county of Salem for the sale of his real estate, and the said court decreed the Pea Patch to be sold.

The moiety of Clement Hall was sold accordingly, and purchased by Henry Gale for \$500, and on the 27th February, 1813, the administrators of Clement Hall conveyed, by deed, to the said Henry Gale, the one moiety of the Pea patch.

On 27th February, 1813, Edward Hall and wife conveyed the other moiety of the Pea Patch to the said Henry Gale by deed of that date.

Doctor Henry Gale went immediately into possession, cleared a fishery on the island, and occupied it during the fishing season for two years, and until he was expelled by force by the United States, who took possession under a grant from the State of Delaware.

No possession had ever been taken of this island until the United States forcibly entered, except by Doctor Gale and those under whom he claimed. Neither the State of Delaware nor any other claiming under it, or adverse to the New Jersey claim, had any possession of the island from its first formation until the United States entered.

This island lies ten or twelve chains nearer to the Jersey shore than to the Delaware shore; and the ship channel, or main channel, runs between the Pea Patch and the Delaware shore.

*The State of New Jersey, by an act passed on the 24th November, 1831, entitled "An act vesting in Henry Gale, his heirs and assigns, all the right and title of the State of New Jersey of, in, and to an island called the Pea Patch, in the river Delaware, in the county of Salem and State of New Jersey," for the consideration therein mentioned, granted and conveyed all the right and title of the said State to the said Henry Gale, his heirs and assigns, forever, in as full and ample manner as the said State hath right and title to grant and convey the same, reserving the right of jurisdiction and sovereignty.

From the above deduction of title, it is obvious that if the grant made by the King to the Duke of York passed any interest in the river Delaware, it is now vested in Doctor Henry Gale. It may be justly argued that it passes by the terms of the grant, which are as comprehensive as can be well imagined.

The grant made by the King to the Duke of York was for the purpose of colonization. It is true that the western boundary is thus limited, "halting upon the west Delaware bay or river;" yet it is manifest that this is not designed to limit anything more than the extent of land, for the grant goes on to pass "all rivers, mines, fishings, royalties, commodities, and profits whatsoever to the said lands and premises belonging, or in anywise appertaining."

† August 6, 1860, the Duke of York, by deed of confirmation, reciting the different grants hereinbefore stated, confirms the moiety of John Lord Berkeley and others, to William Penn and others, with all islands, bays, rivers, forts, waters, royalties, franchises, and appurtenances whatsoever to the same belonging, or in anywise appertaining: as also the free use of all bays, rivers, and waters leading into, or lying between, the said premises, or any of them, in the said parts of America, for navigation, free trade, fishing, or otherwise; and also all the powers of government as fully as they were granted by the King to the Duke of York; and also it is declared that the said several powers and authorities were given and granted to the Duke of York, and his assigns, by the King, for the "planting, peopling, and improving" of the lands, places, and territories, thereby granted, and for transporting thither subjects, &c., as also for the defending, guarding, and keeping the same.‡ The Duke of York, also, by deed of confirmation, dated March 14, 1682, confirmed to the grantee of Sir George Carteret East Jersey in a similar manner.

§ On November 23, 1683, King Charles II confirmed these deeds.

New Jersey has always claimed and exercised jurisdiction over the Delaware bay and river.

|| In 1679 and 1680 Sir Edmund Andros, the governor of the Duke of York, of the colony of New York, which was conveyed (*inter alia* with New Jersey) to the Duke by King Charles II, imposed a duty of 10 per cent upon all European goods imported in the Delaware, which was collected at the Hoar kills, or Lewistown; it was discontinued at the instance of the proprietors of New Jersey, who, in their remonstrance, insist that they have a right to land anywhere in the Delaware bay, as the bounds of the country they bought; that the right of colonizing was part of their bargain; that they bought the soil and right of government together; and that the powers of government limited them to erect no polity contrary to the laws of England; and that with this restriction they had the right of making laws for the good of the

§ Ibid., 151.

|| Smith's History of New Jersey, 116, &c.

adventurer and planter; that if the Duke claims it by the *jure regale*, that power over the Territory constituting New Jersey is vested in his *alienees*.

* In 1682 the legislature of New Jersey resolved that the land and government of New Jersey were purchased together.

† In 1676, in the concessions and agreements of the proprietors, freeholders, and inhabitants of West New Jersey, convenient portions of lands are granted for wharves, quays, and harbors; and it is declared that all the inhabitants of West New Jersey have the liberty of fishing in Delaware river.

‡ In 1681 the commissioners chosen for settling and regulating lands within the province prescribe that the surveyor shall measure the lands from St. Pink creek, (Assinpink creek, at Trenton,) and from thence down to Cape May, and that each proprietary should have their proportion of front to the river Delaware.

§ In 1683 the assembly of New Jersey resolved that the proprietary of Pennsylvania be treated with in reference to the rights and privileges of this province *to or in* the river Delaware.

|| On April 15, 1702, the proprietors of East and West New Jersey surrendered the powers of government to Queen Anne, which was accepted by the Queen on April 17, 1702.

¶ In the proposals made by the proprietors of New Jersey to the lords of the council of trade and foreign plantations, (which is always considered part of the surrender,) the proprietors** stipulate for the confirmation of the soil and lands of the province to the proprietors, and it is acceded to without objection.

‡‡ That the proprietors may be lords of the soil; and it is acceded to.

‡‡‡ And the council say that the rights accruing to the proprietors from the seas adjacent cannot be well circumscribed.

§§ As early as 1765 the legislature of New Jersey passed an act regulating the fisheries in the river Delaware, and have continued to do so ever since.

||| In April, 1783, New Jersey and Pennsylvania entered into an agreement respecting the islands and jurisdiction of the Delaware from the station point to the circular boundary of the State of Delaware, adopting, as the general principle, that the islands should belong to that State to which they lay nearest.

From a very early period the proprietors have passed surveys of islands in the river Delaware, and all the islands in the Delaware are held under surveys approved by the council of proprietors of West New Jersey.

There are few islands in the Delaware below the circular boundary of the State of Delaware.

Egg island and Stipson's island are the only ones now recollected which lie nearest the Jersey shore, and they are both held under surveys on warrants issued by the proprietors of New Jersey.

The several sand flats which have arisen are also now held where they lie nearest to the Jersey shore under surveys on like warrants.

¶¶ In 1693 the assembly of New Jersey passed an act reciting that "the whalery in Delaware bay has been in so great a measure invaded by strangers and foreigners, &c.; and enacting that all persons not residing within the precincts of this province, or within the province of Pennsylvania, who shall kill or bring on shore any whale or whales *within Delaware bay, or elsewhere within the boundaries of this government*, to pay one-tenth of the *oyl* to the governor," &c.

On November 28, 1822, the legislature of New Jersey declared the *ship channel* to be the Delaware boundary of Salem, Cumberland, and Cape May counties.

*** On November 7, 1820, the legislature of New Jersey passed an act to appoint commissioners to meet commissioners to be appointed on the part of Delaware to meet and conclude an agreement between New Jersey and Delaware "defining their respective boundaries, jurisdiction, rights to islands, subaqueous soil, fisheries, and products of the river and bay of Delaware southeastwardly of the circular boundary between the States of Delaware and Pennsylvania."

No commissioners were ever appointed by Delaware.

New Jersey made repeated efforts to induce Delaware to pass similar laws regulating the fisheries in the river Delaware, but without success.

The State of New Jersey has, and for near fifty years has had, laws regulating the fisheries in the Delaware, which assert her jurisdiction, and regulate the exercise of the right of fishing in the whole extent of the Delaware river and bay.

The right of the State of New Jersey to the island in question, it is supposed, may be defended upon the following principles; and if the island is within the jurisdiction of New Jersey the claim of Dr. Gale cannot be well questioned.

1st. By the grant to the Duke of York the islands in the Delaware nearest the shore did or did not pass.

If they did pass, then there is an end of the question, for the Pea Patch lies on the Jersey side of the channel, and is twelve chains nearer to the shore of Jersey than Delaware.

It may be contended that it did pass, by the express terms "all the islands," &c.

1. The best expounder of the rights under those ancient and public grants for colonization and government, is the occupation and enjoyment. For more than sixty years New Jersey has exercised an adverse dominion, under a claim of right, over the waters of the Delaware. This will bind nations as well as individuals.—Vattel, 182, s. 266-4.

2. By the terms of the grant the Delaware is made the western boundary; it was granted expressly for colonization, and the powers of government were granted with the soil. Upon the purchase of so large a tract as New Jersey, bounded on its whole western border by the Delaware, it would be difficult to presume that any right in that river was excluded. It was essential to the purposes of the grant, and all presumption must be in its favor.

3. The claim and holding have always been to the middle of the Delaware. Usurpation and prescription are much more necessarily used between sovereign States than individuals.—Vattel, 254, s. 147.

Prescription composes a title as firm and just as that of property itself, established and supported by the same reasons.—Vattel, 253, s. 141-2.

||| Patterson's N. J. Laws, 57.

¶¶ Leaming and Spicer, 519.

*** Revised Laws, 794.

The State of New Jersey always permitted the proprietors to grant the islands and subaqueous soil of the Delaware. Her courts sanctioned the right, and it has always been acquiesced in. Penn, while proprietor, and the State of Pennsylvania, recognized that right.

2d. If the right to the Delaware did not pass to the proprietors, then it has never been granted. This is undoubtedly the better opinion.

* In 1721 the attorney and solicitor general, Robert Raymond and Philip York, gave an official opinion to the lords commissioners of trade and plantations on the question whether, by the grants of Pennsylvania and New Jersey, the river Delaware passed; that by the said grants "no part of the river Delaware, or the islands lying therein, passed, but the right remained to the crown."

† This is also the opinion of Judge Washington, an opinion entitled to very great respect.

‡ If it remained in the crown until the treaty of peace it was extinguished by that treaty, in which the King acknowledges the several States to be sovereign and independent, not only as to government, but as to the propriety and territorial rights of the same. The effect of the revolution and treaty of peace was to extend the limits of New Jersey to the middle of the bay, from its mouth upwards.

§ By the general law of nations, where a river lies between two States, and is not included within the bounds of either, each holds to the middle of the stream; and the island existing or rising in the river must be allotted to that State to which it is nearest.

I think the right of New Jersey is undeniable if no adverse grant can be shown; none such can be shown which has or ever had validity.

Delaware never was granted by the King, the only rightful grantor. If the question was *de novo* I think that no doubt would exist that the grant under which the three lower counties of Delaware are held would be invalid. If it is good at all it is because possession has ripened it into a title. But it can go no further than the possession goes.

Delaware is not claimed under the grant made by King Charles II to William Penn, on March 4, 1681; it is not included within the boundaries.

The only grants pretended are: 1. A deed of feoffment, August 24, 1682, by the Duke of York to William Penn, for "all that the town of Newcastle, otherwise called Delaware, and all that tract of land lying within the compass or circle of twelve miles about the same, situate, lying, and being upon the river Delaware, in America; and all islands in the said river Delaware, and the said river and soil thereof lying north of the southernmost part of said circle of twelve miles about the said town, together with all rents, services, royalties, franchises, duties, jurisdictions, liberties, and privileges thereunto belonging." And the Duke of York, by deed of feoffment, dated August 24, 1682, granted to William Penn "all that tract of land upon Delaware river and bay beginning 12° south from the town of Newcastle, otherwise called Delaware, and entering so to the Hoar kills, otherwise called Cape Henlopen, together with the rivers, &c., situate in or belonging unto the limits and bounds aforesaid."

There is no doubt but the terms of these grants include the river Delaware. The objection is that the Duke of York had no title whatever to the premises granted. That could only be acquired by a grant from the King; none such was ever made, or can be produced.

It is true that Colonel Nicolls, the governor of New York under the Duke of York, conquered Delaware from the Dutch; but that gave no title to the conquered lands to the Duke; he was then a subject, and no principle is better settled than that all conquests made by a subject enure for the benefit of the crown.

This title by conquest would seem to be the one relied on by the Duke. This is confirmed by the mode of conveyance, *by deed of feoffment*, an extraordinary mode of conveying wild lands, &c., and best adapted to convey a possessory right.

It may be well doubted whether *subaqueous soil*, incapable of possession, as well as rights of jurisdiction and other rights, incapable of delivery, would pass by a deed of *feoffment*.

§ In October, 1717, Edward Northey and W. Thompson, attorney and solicitor general, in their opinion to the lords commissioners of trade and plantations, deduce the title of William Penn to Delaware. It is manifest that they are not aware of any valid grant from the King.

|| Also, in 1721, Robert Raymond and Philip York are manifestly ignorant of any valid grant of the Delaware river; and it is hardly to be supposed that not only the law officers of the Crown, but the lords commissioners of trade, &c., should be ignorant of so important a conveyance from the Crown. It is sufficient, however, to say that no such grant can be produced.

These opinions of the law officers, before referred, render it certain that none was ever made.

Then there is no valid grant from the King to any person for the river Delaware; and the right arising from the revolution and the treaty of peace, as well as the general law of nations, allots to the contiguous States, respectively, the jurisdiction and propriety in the river to the middle of Delaware, from its mouth upwards.

In looking at the grant made by the Duke of York to William Penn of Newcastle and the twelve-mile circle, it is obvious that it would include a considerable portion of the county of Salem, the whole of the town of Salem, and several other places then actually settled and inhabited under former grants made by the Duke of York, under title derived from the King. The several deeds of feoffment made by the duke to William Penn being *void*, cannot be extended beyond what was actually possessed under it; and it must now be limited by that possession.

I am not aware that Delaware has ever asserted her claim to the waters of the Delaware, even to the channel, except in the cession made to the United States.

Even if there were doubts about the validity of the Delaware title, which I do not think is the case, yet I think the United States ought to compensate Doctor Gale.

When Delaware ceded the island to the United States, Doctor Gale was in possession, under a title valid within New Jersey. The United States received a conveyance from the State of Delaware when out of possession, and upon that title forcibly ejected and dispossessed Doctor Gale, who was in possession under title derived from those who had been in possession, peaceable and undisturbed, for thirty years at least.

GARRET D. WALL, Attorney United States for the district of New Jersey.

BURLINGTON, June 9 1834.

§ Chalmers's Opinions, pp. 40 to 57.

|| Ibid., p. 61.

ATTORNEY GENERAL'S OFFICE, *June 16, 1834.*

SIR: In answer to your inquiry concerning the title of the United States to the Pea Patch island, upon which you have again requested my opinion by your letter of the 14th instant, I have the honor to state that upon the facts disclosed in the statement and opinion of the district attorney, Mr. Wall, I should have little difficulty in coming to the conclusion that the title to this island was in 1831 in the State of New Jersey, and that by the act of her legislature, passed on the 24th of November in that year, it was vested in Henry Gale, the present claimant. Mr. Wall, however, differs from Messrs. Rodney and Read in regard to several material facts, and especially in respect to the title and jurisdiction heretofore claimed and exercised by their respective States in and over the waters of the Delaware. Mr. Wall states that "for more than sixty years New Jersey has exercised an adverse dominion, under a claim of right, over the waters of the Delaware," and that "the claim and holding have always been to the middle of the Delaware." On the other hand, Mr. Read, in his opinion of the 7th of September, 1818, affirms that the State of Delaware, according to the limits defined in the deed of feoffment from William Penn, (which includes the island in question and the whole river,) "has uniformly asserted and exercised jurisdiction over the river to the low-water mark of the State of New Jersey." And the same fact is substantially stated in the joint opinion of Messrs. Rodney and Read, enclosed in their letter to the Secretary of War of the 2d of July, 1820. With this point unsettled and debated, it would be difficult and unsafe to say more than was expressed in my communication to you of the 31st of December last, to which, therefore, I must yet adhere; though I have no doubt as to the expediency of extinguishing the claim of Mr. Gale, provided it can be done upon reasonable terms.

I am, sir, with great respect, your obedient servant,

B. F. BUTLER.

The papers are herewith returned.

HON. LEWIS CASS, *Secretary of War.*

WAR DEPARTMENT, *January 20, 1835.*

SIR: From the enclosed copy of a letter of the 17th of June last to the Hon. Daniel Webster, which I have the honor to transmit to you, you will perceive that the papers asked for in your letter of the 17th instant, in relation to the island on which Fort Delaware stood, were transmitted during the last session of Congress to the Finance Committee of the Senate, to whom I must refer you for them, as they have not yet been returned to the department.

Very respectfully, your most obedient servant,

MAHLON DICKERSON, *Acting Secretary of War.*

HON. R. M. JOHNSON, *Chairman of the Committee of Military Affairs, House of Representatives.*

DEPARTMENT OF WAR, *June 17, 1834.*

SIR: I have the honor to enclose herewith certain papers mentioned in the accompanying list. They have just been received from General Wall, the United States district attorney for the State of New Jersey, to whom they were referred for his opinion in the case to which they relate. This opinion, with the papers, has been submitted to the Attorney General, whose opinion you will also find enclosed.

On the whole it is deemed advisable to extinguish the title of Mr. Gale, by the payment of the sum proposed, to wit: \$20,000, and with this view I have the honor to request you to propose the necessary provision, when the bill making appropriation for certain fortifications, now before the House, shall reach the Senate.

When you shall have no further use for the papers will you have the goodness to return them to the files of this department?

With great respect, I am, sir, your obedient servant,

LEWIS CASS.

HON. DANIEL WEBSTER, *Chairman of the Committee on Finance, United States Senate.*

BURLINGTON, *New Jersey, January 24, 1820.*

SIR: As measures are taking to bring on the trial of the action of ejectment brought by Henry Gale for recovering the Pea Patch at the circuit court of the United States to be held at Trenton on the 1st day of April next, I think it proper to call your attention to that subject. Mr. Read, of Delaware, will, I understand, attend the trial on the part of the United States, and I have no reason to doubt but that they will be ably defended. In a case, however, of so much importance, to be tried by a jury of New Jersey, and involving a question as to the territorial limits of the State, in which its citizens are deeply interested, I would respectfully ask whether it would not be prudent to engage on the part of the government the most influential and able counsellor at our bar—I mean Richard Stockton, esq., of Princeton. Should you be of that opinion, it cannot be done too soon, as he would not only require time to investigate the adverse claims, but his advice might be useful in preparing the cause for trial.

I am, very respectfully, your obedient servant,

J. McILVAINE, *Attorney of United States for New Jersey District.*

HON. JOHN C. CALHOUN, *Secretary of War.*

NEWCASTLE, *September 7, 1818.*

Captain Babcock of the United States engineers has submitted to my consideration a communication addressed to him from the Engineer department, instructing him to institute an inquiry as to the title to the island in the river Delaware commonly called the Pea Patch, and has requested me to give him my views in relation to the matter.

My opinion is that any claim of title not derived from the State of Delaware is entirely groundless. By the deed of feoffment of the Duke of York to William Penn, anno Domini 1682, "of Newcastle and the twelve miles circle," there is granted "all that the town of Newcastle, otherwise called Delaware, and all that tract of land lying within the compass or circle of twelve miles about the same, situate, lying, and being upon the river Delaware, in America; and all islands in the said river Delaware, and the said river and the soil thereof lying north of the southernmost part of the said circle of twelve miles about the said town." By this deed are defined the boundaries by which are limited the sovereignty and jurisdiction of the State of Delaware, and according to such limits the State has uniformly asserted and exercised jurisdiction over the river to the low-water mark of the State of Jersey. In conformity to this established right the State of Delaware, by an act of assembly passed May 27, 1813, ceded to the United States the jurisdiction and soil of the island called the Pea Patch, which is about six miles below Newcastle, and nearly equidistant from the shores of Delaware and Jersey. No title other than that of the United States is known of, derived from the State of Delaware. A warrant, it is said, was taken out of the land office of the last-mentioned State to survey the island in question, about twenty-five years since, but no return was ever made or any location effected that is believed, and the land office was soon after closed, and has ever since so remained. It may be remarked that no cession was asked for except from the State of Delaware previously to the proposed erection of fortifications by the general government, although the commanding general of the military district of which Delaware formed a part was a distinguished citizen of New Jersey, and from the place he occupied in her councils and at her bar, must have been well aware of all her rights.

It is not intended to discuss elaborately the validity of a title the grounds of which are not stated, but, as it is presumed to be derived under and from a New Jersey patent, it may not be out of place to take a brief view of the grants, &c., under which, if at all, New Jersey could give a title to the island in question.

In 1664 King Charles II made a grant to the Duke of York of a large territory, which included New Jersey, the western boundary of which is made the river Delaware: "all the lauds from, &c., to the east side of the Delaware bay." In the same year the Duke granted to Berkeley and Carteret the part of the said territory now called New Jersey, and thus describes its western boundary: "and hath upon the west Delaware bay and river."

In 1702 a surrender was made of their rights of government by the then proprietors of East and West Jersey to Queen Anne. This instrument recites the two last-mentioned grants, and surrenders the territorial government according to the boundaries therein mentioned, thus acknowledging those limits to the jurisdiction of Jersey as having been heretofore accepted, and this acknowledgment made, too, at a period subsequent to that which fixed those of the neighboring government. And what is remarkable, too, the above-mentioned grant of Charles, recited in the surrender, grants the river Hudson by name, "together also with the said river, called the Hudson river," while it merely mentions the Connecticut in marking the eastern, and the Delaware in defining the western boundary.

There was, then, nothing to prevent the Duke of York granting the river and soil thereof to William Penn, and such a grant entitled the State of Delaware to that complete title which, by cession, is now in the United States of America.

GEORGE READ, JR., *Attorney of United States for Delaware District.*

OFFICE OF THE ATTORNEY GENERAL, *January 8, 1820.*

SIR: It is only within a few days back that I have been put in possession of copies of all the documents that can be found relative to the title to the island in Delaware river, called the Pea Patch. Even yet the grant from the crown, on which the title of the State of Delaware to that island is founded, has not been procured and forwarded.

If such a grant ever existed, (which the district attorney for Delaware doubts,) and its production should hereafter become necessary, it may be, I presume, obtained through our minister at London. But I apprehend it will not be necessary on the trial of the suit which Dr. Gale has instituted against the officers of the United States, because the plaintiff must show a title in himself before the defendant in possession can be required to produce any proof of title; and Dr. Gale, according to the evidence before me, can show no title himself, and because if he could exhibit proof which would call upon us to show our title, we can rest, I think, securely on our length of possession under the title derived from the Duke of York, afterwards King of England.

The territorial title of the State of Jersey, under which Dr. Gale claims, takes for its western boundary, in the most express terms, the east side of the Delaware bay and river. Such is the language of the grant of the Duke of York; and such the language of that Duke's deed to John Lord Berkeley and Sir George Carteret. Dr. Gale, by stopping at the east side of the Delaware, will never get to the Pea Patch, and consequently cannot show such a title in himself as to authorize a judgment in his favor.

The State of Delaware (whose title we hold) claims under a deed from the Duke of York to William Penn, conveying to him the town of Newcastle, and all that tract of land lying within the compass or circle of twelve miles about the same, situate, &c., upon the river Delaware, and all the islands in the said river, and the said river and soil thereof, *lying north of the southernmost part of the said circle of twelve miles about the said town.* If any question could exist whether the *twelve miles about the town* here mentioned indicated a circle whose radius (and not whose diameter) was twelve miles, it would be removed by reference to the next or supplemental deed from the Duke of York to William Penn, which, designing to cover the residue of the present State of Delaware, takes for its beginning a point on the Delaware river, *twelve miles south of the town of Newcastle*, clearly manifesting that the former deed was considered as covering the title to that point. All that part of the river, with all the islands in it, which lies to the north of this

point, having then been conveyed to William Penn, and the Pea Patch being an island in the river to the north of that point, it seems clear to me that it is included in this deed, and consequently that the United States, who claim under it, have the best, and, indeed, the only valid title.

I have the honor to be, sir, very respectfully, your obedient servant,

WILLIAM WIRT.

Hon. JOHN C. CALHOUN, *Department of War.*

WILMINGTON, July 2, 1820.

SIR: In compliance with instructions received from the Department of War, and from Major Babcock, of the corps of engineers, charged with the erection of works on the island in the Delaware called the Pea Patch, we attended the late term in April, of the circuit court of the United States for the district of New Jersey, at Trenton, to contribute our aid in the defence of an ejection brought to recover possession of that island.

On our arrival we found there were several suits on the list of trials prior to that in which the United States were concerned, which would occupy the court during the whole term. The case of the Pea Patch was, of course, continued until the ensuing term, in October next. This, however, enabled us to obtain a rule for the trial of the cause by a special jury, and it afforded us an opportunity of collecting more testimony.

After our return it occurred to us that it might not be unacceptable to yourself, or the Attorney General, who has been consulted, if we were to prepare a report on the subject of the case, so interesting and important to the United States. This we concluded to do as soon as all our courts were over, and they terminated but a few days since.

We have now the honor to present you with a paper on the subject,* drawn up with some attention, though not with all the care and deliberation, perhaps, which the magnitude of the case required.

We regret that separated as we are from the able and eminent counsel concerned for the United States in New Jersey, we could not have the benefit of their aid in the execution of this task. But we acknowledge ourselves indebted to them for important information, communicated when we were at Trenton.

We have the honor to be, very respectfully, your obedient servants,

C. A. RODNEY,
GEORGE READ, JR.

BURLINGTON, N. J., April 20, 1822.

SIR: I have the honor to inform you that, at the last session of the circuit court of the United States, held in New Jersey, the action of ejection, prosecuted by Doctor Henry Gale against Major Babcock, to obtain possession of an island in the Delaware river, commonly called the Pea Patch, was discontinued by the plaintiff. It would seem that his counsel have at last become convinced, either that he has no pretence of title or that, such as it is, it can only be maintained by the weight of the State. Some weeks ago, a notice was served on me, stating that a motion would be made in the circuit court to include the State of New Jersey in the controversy, by making it one of the lessors of the plaintiff. The motion, founded on an act of our legislature, passed some months ago, appropriating \$2,000 to defend the jurisdiction of the State, and on the assent of the governor to make the State a party to the suit, was made accordingly; but the judges being of opinion that the act was not intended to embrace the case presented to them, and if it was that it would be improper to let the State into the dispute in the manner proposed, refused the application. The plaintiff immediately discontinued his action, declaring his intention to bring another in the supreme court of the State, in which the State would be made a party. Believing that such an action will be instituted, Mr. Stockton unites with me in recommending an application by the government of the United States to the legislature of New Jersey to pass an act corresponding with that passed by the State of Delaware. There can be no doubt, considering the benefits which New Jersey may at some future period derive from the fortifications erecting on the Pea Patch, that the legislature would receive and act on the application in the most friendly manner, not, however, impairing the rights of individuals, but leaving them to stand as they now do.

For your information, and to prevent too much confidence in the title derived from the State of Delaware, and to satisfy you that the application to the legislature of New Jersey, above recommended, would at least be a prudent measure, I take this occasion to mention, within a very narrow compass, the title of Gale, of New Jersey, and of the State of Delaware, to the Pea Patch.

1. *Gale's title.*

In 1664 Charles the Second granted to James, Duke of York, "all the land from the west side of Connecticut to the east side of Delaware bay;" and in the same year the Duke of York conveyed to Lord Berkley and Sir George Carteret all the (now) State of New Jersey "in as full and ample a manner as the same was granted to him." From these persons Gale derives his title. Now as the island in question lies west of the east side of Delaware bay, it is manifest that it was not included in the grant from the King to the Duke of York, and that the Duke, and those claiming under him, never had any title to it.

2. *The title of New Jersey.*

The advocates of the title of New Jersey insist: 1st. That the island has been formed within sixty years, and being nearer to New Jersey than to the State of Delaware, belongs to New Jersey. 2d. That whether of ancient or modern formation the title remained in Charles the Second and his successors until New Jersey became a sovereign and independent State, when it vested and still is in the State.

3. *The title of the State of Delaware, or of those claiming under William Penn.*

1st. It is said that Charles the Second granted to James, Duke of York, all the land that forms the present State of Delaware, with all the river, and all the islands in the river, opposite the shores of that

*This statement of the case by C. A. Rodney and George Read, jr., will be found in vol. 2 on Military Affairs, No. 224, page 376.

State. 2d. That in 1682 the Duke of York made a grant to William Penn, the terms of which are extensive enough to include the Pea Patch, and that Delaware derives title from Penn.

It is true that the grant to William Penn extends to the *east* side of Delaware bay, and includes the river and all the islands, but on the part of New Jersey it is objected that the Duke was not authorized to make such a grant, never having received one himself from the King. I have examined all the books and records that can be found relating to the subject, and am satisfied that a grant from Charles to the Duke of York for the property conveyed by the Duke to William Penn cannot be found, and in all probability was never made. There is some ground for believing that, in 1683, (one year after the grant from the Duke to William Penn,) the Duke obtained from his brother a warrant for *passing a patent*, but there is no evidence that it ever was done, or even of the *contents* of that warrant.

On the whole, it will be found that the islands in the Delaware have never been granted by the sovereign; that in regard to the Pea Patch, Delaware, to say the least, has no better title to it than New Jersey; and that it is a fair subject of negotiation and settlement between the two States. With respect to the islands lying between New Jersey and Pennsylvania, it has always been conceded that they belonged to the two States as sovereigns, and were not transferred by any of the grants of Charles the Second.

At the request of Mr. Stockton, I enclose the account for his services in the controversy with Gale. He will be obliged to you to remit the amount as early as convenient. Considering that he has been principally relied on, that he has attended at two or three terms, when the cause has been noticed for trial, and that he argued in opposition to the motion before mentioned, his charge appears to me reasonable. As the *title* of the State of Delaware was not likely to be called in question, I did not think it necessary, on that occasion, to request the assistance of Messrs. Rodney and Read.

I have the honor to be, very respectfully, your obedient servant,

J. McILVAINE, *Attorney for New Jersey District.*

HON. JOHN C. CALHOUN, *Secretary of War.*

WILMINGTON, *March 4, 1823.*

MY DEAR SIR: I understand that new proceedings have been instituted for the recovery of the Pea Patch. Ever since the claim under a title from New Jersey was set up, I have naturally felt anxious on the subject, because I believe that I was the first person to direct the attention of government to this spot as the most eligible site for a fortification to defend the passage of the Delaware. This was many years since, when a member of Mr. Jefferson's administration. I beg leave, therefore, respectfully to recommend the immediate employment of Mr. Van Dyke to defend the title of the United States to the Pea Patch. There can be no objection, as the term of his senatorship has expired. Of his character, knowledge, and talents, it is unnecessary for me to say a single word. He is every way qualified for the important task.

I shall be very glad to receive a cadet's letter for Gustavus Binny, of Philadelphia, whom I have so warmly recommended.

Yours, very respectfully and sincerely,

C. A. RODNEY.

BURLINGTON, *New Jersey, July 24, 1823.*

SIR: In my last communication relative to the Pea Patch I had the honor to state, that although Judge Washington at the term of October, 1822, on the application of the counsel of the United States, suffered the action of ejectment brought by Henry Gale against Major Babcock, in the supreme court of this State, to be entered for trial in the circuit court of the United States; yet that I had apprehensions, arising from information lately received, that he had altered his opinion as to the jurisdiction of the latter court in a case in which the State of New Jersey is a party; and that at the ensuing April term he would probably direct the cause to be sent back to be tried in the court in which it originated. He did so, and the trial will take place either in the county of Salem, before *one* of the justices of our supreme court, or at Trenton, before *all* of them. Which course the counsel for the plaintiff intend to take is uncertain; but considering the importance of the points of law to be decided, and the present value of the property, I conclude they will prefer to have the opinion of *all* the justices; and that the cause will be tried at Trenton, either on the first Tuesday of September, or the second Tuesday of November next. If, therefore, it is your intention to employ counsel from Delaware to assist in the argument of the cause, it cannot be done too soon. You will recollect that Mr. Rodney was associated with Mr. Reed; and much reliance was placed on his knowledge of the rights of the State of Delaware.

I have the honor to be, very respectfully, your obedient servant

J. McILVAINE.

HON. J. C. CALHOUN, *Secretary of War.*

NEWCASTLE, *August 24, 1823.*

SIR: In conversation with my friend, Mr. Rodney, on the subject of the suit relative to Fort Delaware, shortly before he sailed, I was informed that he and the other counsel for the United States had some time ago prepared a statement of the case, embracing the facts within their knowledge, for your view, but he had no copy of the paper. Will you be so good as to order a copy of that statement, if in your possession, to be made for me?

Very respectfully, sir, your most obedient,

N. VAN DYKE.

HON. J. C. CALHOUN.

BURLINGTON, *New Jersey*, November 26, 1822.

SIR: I have the honor to enclose to you a copy of the report of the committee appointed by the house of assembly of this State, on the application of the United States for a cession of the Pea Patch, from which you will learn the reasons which have prevented a cession at this time. The legislature met on the 22d of October. From the tenor of Governor Williamson's letter to you, I presumed that, without further solicitation, he would, at an early period, present the subject to the legislature for consideration; and under this impression, I waited until the first of this month, when I thought it best, as nothing appeared to have been done, to call on his excellency, and request that the business might be placed in a course for decision. He assured me it should be done immediately, and that he had only delayed it that he might have some previous conversation with me relative to objections to a cession at the present time, and under existing circumstances, which, on a deliberate consideration of the subject, had arisen in his mind, (the same stated in the report,) and which he wished to have removed if possible. This I was unable to do satisfactorily to his mind, and I left him after receiving an assurance that a communication should be made to the house of assembly the ensuing week. On the 12th of November I again went to Trenton, to remind him of his promise. He mentioned that he had been continually engaged since our last interview, but that on the following day he would send a message, with all the papers relating to the subject—which he did accordingly. In this message he recommended a cession, provided it could be made without prejudicing New Jersey in her controversy with Delaware. A committee was appointed to investigate the subject, before whom I was heard at full length in support of the application, and from whom I received an assurance that, as they could perceive no reasonable objection to the measure, they would make a favorable report. I remained at Trenton until the 18th, expecting their report, and for the purpose of furnishing such further explanations as might be required. On that day the dangerous illness of one of my family obliged me to go home. On the 22d I returned to Trenton, and was surprised to find that the committee, instead of reporting as I expected, had reported against a cession for the present. Upon inquiry, it appeared possible to have the report rejected, and to procure the passage of a bill granting the island to the United States, in the lower house; but, at the same time, I was convinced that it would be negatived in council, where the governor, who is opposed to any such measure at present, presided, and whose opinion upon the important questions involved in the dispute with Delaware would be received, and justly too, with great respect and confidence. Under this conviction, I declined troubling the legislature further. Neither on the part of the legislature nor of the governor could I discover the least hostility to the measure, except as above stated; and whenever the obstacles stated in the report shall have been removed, the cession can be obtained without the smallest difficulty.

In my last communication to you, respecting the Pea Patch, I mentioned that in consequence of a refusal by the circuit court of the United States to suffer the State of New Jersey to become a party to the first action of ejectment which Gale commenced against Major Babcock, Gale discontinued it, and commenced another in the supreme court of this State, in which New Jersey is made one of the lessors of the plaintiff. With a view to a more impartial decision, I took measures for carrying this action into the circuit court of the United States, and, after much opposition, on the ground that that court has not jurisdiction of such a case, succeeded in getting the action regularly removed. I am, however, informed that the judges, after a more deliberate view of the subject, have changed their opinions, and will, at the next April term, remand the cause to the supreme court of the State. In this event it will be tried either at the bar of the court, before all the judges at Trenton, in May, or before a single judge, at *nisi prius*, in June next, in the county of Salem. I shall prefer the former.

I have the honor to be, very respectfully, your obedient servant,

J. McILVAINE.

Hon. J. C. CALHOUN, *Secretary of War*.

The committee to whom was referred a communication from his excellency the governor, covering a correspondence with the Secretary of War respecting an island in the Delaware bay called the Pea Patch, respectfully report:

That it appears by the documents submitted to them, and from other information upon which your committee rely, that in the year 1813 the United States having determined to erect fortifications for the defence of the Delaware bay and river, selected the Pea Patch as a position suitable for that purpose. This island lies within the jurisdictional limits of New Jersey, and was at that time in the peaceable occupation of one of our citizens, claiming under a grant of the West Jersey proprietors, made in 1784. No application was, however, made to the authorities of this State on the subject, but military possession was taken by the United States officers, and the occupant dispossessed. The district attorney of the State of Delaware and other legal characters in that State and Pennsylvania, it seems, were consulted, who were of opinion that the title to the soil and territory was with the State of Delaware.

The legislature of Delaware made a cession, and under that title the United States took possession and commenced constructing a fort. The individual dispossessed instituted a suit against the engineer, which is now pending before the circuit court of the United States. A difference unhappily subsists between New Jersey and Delaware relative to their boundary and their respective rights in the river and bay of Delaware; and this difference is not limited to the Pea Patch, but embraces other subjects of dispute. In 1820 the legislature of this State having been made acquainted with the facts above stated, and with the circumstance that a suit was pending, actuated by a desire to a speedy and amicable settlement of the controversy, as well in relation to this particular subject as to all other questions growing out of the disputed boundary, passed an act for the appointment of commissioners to meet commissioners to be appointed on the part of Delaware, with full power to make and conclude an agreement between the two States, defining their respective boundaries, jurisdictions, rights to land, &c., in the river and bay of Delaware. To this overture the State of Delaware did not think proper to concede, nor was any answer ever returned to the proposal.

In the year 1821 the legislature of this State passed an act (among other things) to authorize and empower the governor to appropriate a sum of money, at his discretion, to prosecute or defend to final

issue or judgment any suit or suits which he might deem necessary for trying and finally determining the jurisdictional line between the two States. The attempt to effect an amicable settlement having failed, it was believed that the pending suit afforded a favorable opportunity of obtaining the decision of an impartial and enlightened judicial tribunal. The United States claiming under Delaware, and the former occupant under this State, the jurisdictional line will fairly come in question. This must inevitably happen unless the plaintiff should fail on account of some technical defect in his title. It would therefore be manifestly unsafe to leave the question of jurisdiction to be tried and determined by an action brought solely by an individual free from all control and interference of the State. Though the State could not be concluded by such a trial and decision, yet its rights might be greatly injured by the action being brought to trial without the advantages which might arise from a direct interference by employing counsel and taking the management and control of the suit.

The Secretary of War, under the direction of the President, now asks for a cession from the State for the purpose of further strengthening the title of the United States, and enabling them the better to resist the claim of our citizen. Your committee are decidedly of opinion that were the subject freed from the danger of affecting as well the rights of our citizen who has been deprived in the manner stated of his possession, as the question of boundary between this State and Delaware, the required cession ought to be unhesitatingly made. The position is deemed by the Secretary of War a very valuable one, not only as it regards the defence of the State of New Jersey, but the country bordering on the Delaware. Whatever opinion we might be disposed to entertain on this point as individuals, it would certainly be yielded to the decision of the distinguished officers composing the board of engineers, approved, as that has been, by the able and enlightened officer at the head of the War Department.

New Jersey has at all times evinced a sincere desire to afford every facility to the measures of the general government, and your committee are well aware that the present is a time when we are particularly called on to encourage by all proper means the laudable effort to arrange and complete a well digested system of defence. Your committee, however, are of opinion that, taking into view all the circumstances, it will be most prudent, and consist better with the dignity and interest of the State to delay a cession of the island in question. No injury can result from such a course. The works commenced will not be interrupted in their progress, and in the meantime the controversy existing between this State and Delaware may be settled by a judicial decision, and the claim of our citizen decided in the same manner. The general government will duly appreciate the motives by which we have been governed, and cannot impute to this State any desire to obstruct or delay the completion of the fortifications now erecting. In the event of a determination adverse to our claim, no cession will be necessary; and should the contrary, as we confidently believe, be the result, we can then with more propriety transfer our right in the manner requested, and, at the same time, protect the interests of the individual claimant. Your committee therefore respectfully propose that the documents referred to them be recommended to the consideration of the next legislature.

By order of the committee.

LUCIUS Q. C. ELMER, *Chairman.*

BURLINGTON, N. J., November 11, 1824.

SIR: I have the honor to inform you that yesterday the supreme court of this State, on the deposition of Major Babcock, ordered that the Pea Patch case shall be tried by a foreign jury, to be taken from the county of Middlesex. This is what I have wished from the commencement of the action, and would have been ordered last September had not a packet made up by my direction, addressed to Richard Stockton, of Princeton, and put in the post office of Newcastle by Major Babcock, been totally lost. It is of great importance to the United States that the cause should come before a jury taken from a county not bordering on the river Delaware, and wholly disinterested, as we believe the people of Middlesex are. The only inconvenience resulting from this proceeding on our part will be a delay of the trial till May next, when the cause will be brought before all the judges of our supreme court, at Trenton.

Mr. Stockton advises the employing of Mr. Wood as assistant counsel on the part of the United States; residing in the county of Middlesex, he is personally acquainted with every person who will probably be selected as a juror, and will be very useful in striking the jury; besides he is a gentleman of great influence in that county, and not inferior in talents to any one at the New Jersey bar. Should you think proper to employ Mr. Wood, a retainer of fifty dollars, as a retaining fee, will be necessary. He resides at New Brunswick, in this State.

I am, very respectfully, your obedient servant,

J. McILVAINE.

HON. JOHN C. CALHOUN, *Secretary of War.*

BURLINGTON, N. J., November 8, 1825.

SIR: I have the honor to state, for your information, that the action of ejectment brought by the State of New Jersey, Dr. Gale, and others, against Major Babcock, of the engineer corps, to obtain possession of the island in the Delaware river, commonly called the Pea Patch, was noticed for trial at the present term before the supreme court of New Jersey, at Trenton. Of this, early notice was given to Mr. Van Dyke and Mr. Read, of the State of Delaware, and every requisite preparation made on the part of the counsel residing in the State of New Jersey, who were anxious to bring the cause to a termination. Letters, however, have been received from Mr. Van Dyke, stating that he is confined with sickness, which totally incapacitates him from attending to his professional business, and from Mr. Reed, who states that he cannot attend our court without great inconvenience; both requesting that the trial might be postponed. Considering that the attendance of these gentlemen at the present term was not to be expected, and knowing that great reliance was placed on their exertions in behalf of the United States, although the counsel employed in New Jersey were prepared and desirous of proceeding in the business, they thought it right to yield to the request for a postponement. A proper application was therefore made and granted, and

the cause now stands adjourned to the second Tuesday in May next. Major Babcock, I understand, is removed from his former station, and it did appear to me that the cause could not have been fairly tried without his aid. He is in possession of charts and maps which will be much wanted; besides, he is acquainted with some important facts which he has derived from persons residing near the Pea Patch, whose names are known only to himself; Mr. Stockton joins me therefore in requesting that he may be directed to be here by the 15th of April next. The witnesses summoned on the part of the United States were such as I had accidentally discovered some time ago.

Herewith I send a bill for fees due me at this time in the present action of ejectment, the amount of which I will be glad to receive as soon as you can find time to give an order to that effect; I would merely remark, that my accounts in the two preceding actions have been paid, and that the charge relates solely to the last action, in which neither Mr. Stockton nor myself have received one cent, although the business on the part of the United States has been transacted by us alone.

I have the honor to be, very respectfully, your obedient servant,

J. McILVAINE.

HON. JAMES BARBOUR, *Secretary of War.*

23D CONGRESS.]

No. 595.

[2D SESSION.]

ON THE CLAIM OF DANIEL PARKER, AS ADJUTANT AND INSPECTOR GENERAL OF THE ARMY, TO THE PAY AND EMOLUMENTS OF A BRIGADIER GENERAL, AND OTHER ALLOWANCES.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 2, 1835.

Mr. BANKS, from the Committee on Claims, to whom was referred the claim of General Daniel Parker, reported:

That the claimant sets forth in his memorial that, under the act entitled "An act for the better organization of the general staff of the army of the United States," passed the 3d day of March, 1813, he was appointed adjutant and inspector general, with the rank, pay, and emoluments of a brigadier general; that he was the only incumbent of that office from the passage of said law until the last reduction of the army, by the "Act to reduce and fix the military peace establishment of the United States," passed the 2d of March, 1821; that in the settlement of his accounts he has not received all the emoluments allowed to other brigadier generals of the army; that while the accounting officers of the treasury have acknowledged the justice and equity of his claim, they have not felt themselves authorized to make such further allowance for forage, fuel, quarters, and rations as have been paid to others. He further states that when his services as adjutant and inspector general ceased under said law he was assigned to the office of paymaster general in the army; that he discharged the duties of said office until the completion of the organization under the act of the 2d of March, 1821, when his public services terminated; that he is justly and equitably entitled to such pay and allowances for fuel and quarters as have since been allowed and paid to his successors in that office. He also claims the three months' pay provided by the 13th section of the act of the 2d of March, 1821. He asks that a law may be passed authorizing the settlement of his account upon just and equitable principles.

The petitioner's claim may be classed under three separate heads:

1st. He claims the right to receive, for and during the term that he held the office of adjutant and inspector general, all the emoluments which were allowed and paid to brigadier generals by Executive regulation.

2d. That he has a right to receive, for the term during which he held and discharged the duties of the office of paymaster general of the army, the same pay and allowance for fuel and quarters as have been since allowed and paid to his successor in that office.

3d. That he is entitled to three months' pay under the thirteenth section of the act of 2d of March, 1821, as a supernumerary officer, discharged from the service of the United States.

This claim has been long contested in the department before the proper accounting officers, and is rendered somewhat complicated by the different opinions which have been expressed by different officers in regard to it, as well as by the confused mass of papers which have been laid before the committee.

The committee have examined the case with much care and attention, and will take up and present the claim in the order in which they have above stated it.

The claimant was appointed to the office of adjutant and inspector general of the army on the 22d of November, 1814.

The office was created by the act of the 3d of March, 1813, which in its first section provides "that the Adjutant General's, Inspector General's, and Quartermaster General's department shall consist of the following officers; that is to say, an adjutant and inspector general, with the rank, pay, and emoluments of a brigadier general."

It is provided by the fourth section of an act entitled "An act fixing the military peace establishment of the United States," passed the 16th of March, 1802, that there shall be paid "to the brigadier general two hundred and twenty-five dollars per month, which shall be his full and entire compensation, without a right to demand or receive any rations, forage, travelling expenses, or other perquisite or emolument whatsoever, except such stationery as shall be requisite for his department."

It is further provided by the fifth section of said act that there shall be allowed "to the commanding officer of each separate post such additional number of rations as the President of the United States shall from time to time direct, having respect to the special circumstances of each post."

By the act of the 12th of April, 1808, it is provided "that each brigadier general shall receive one hundred and four dollars per month, twelve rations per day, or an equivalent in money, and sixteen dollars per month for forage, when not furnished by the public."

It appears that the claimant received the pay and emolument allowed by law to a brigadier general, and now claims the additional allowances made by the order of the Executive, at different times, in favor of brigadier generals, by virtue of the discretionary power vested in him by the act of the 16th of March, 1802.

On the 25th of August, 1812, the President made the following order: "that generals commanding separate armies should receive double rations."

In the month of February, 1814, the War Department issued the following order: "It is ordered that general or other officers commanding districts shall, while so doing, receive double rations, which shall supersede all other grants of double rations at posts within the district."

On the 6th of March, 1816, a general order was issued, as follows: "Generals commanding divisions, officers commanding military departments, and all officers while in the command of permanent posts and garrisons separate from the stations of commandants of departments, which subject them to the additional expense of independent commands, are allowed double rations. No more than one officer can be entitled to double rations at the same station."

On March 6, 1816, the Secretary of War made the following order: "A commutation of double rations is allowed to the adjutant and inspector general, in lieu of fuel and quarters."

On October 10, 1818, an order was made by the Secretary of War to the following effect: "The reason for the allowance to the chief of the engineers and to the adjutant and inspector general, in lieu of fuel and quarters, no longer existing since the establishment of the Quartermaster's department, at the termination of this quarter such allowance will cease; and the quartermaster general will, on requisition, furnish them with fuel and quarters, agreeably to their respective ranks."

The petitioner's claim, it is confidently believed, rests upon the acts of Congress and Executive regulations just cited.

By the provisions of the 5th section of the act of March 16, 1802, there is vested in the President of the United States a discretionary power to allow to the officers commanding separate posts such additional number of rations, from time to time, as he may deem just; he having due regard, in cases of such allowance, to the special circumstances of each post. The President is not enjoined to make this allowance. He has a full discretion given to grant or withhold it, according to his sense of justice and propriety. He may grant it to one and deny it to another of the same rank. The power is altogether discretionary, and ought to be guided by a due regard to the circumstances of each case. This is the plain letter and obvious meaning of the law; and we are bound to believe that the power was so exercised.

The reason of this grant of discretionary power to the President is very apparent. The expense of a separate command might very properly and justly require it. Of this necessity the President is made the sole judge. Where he has made the allowance, there can be no controversy about it; the person in whose favor it was made would be entitled to it. Where he has not made the allowance, the case would be equally free from difficulty; and, in such case, there could be no right to it. It rests altogether in Executive discretion. The language of the law is very clear and explicit. The officer must command a separate post, and the allowance must be made by the Executive. The Executive may make the order of allowance himself, or it may be made by the Secretary of War, under his authority, and as his official organ.

The single question would appear to be this: Did the President of the United States, or the Secretary of War, under his authority, make the allowance in favor of the petitioner which he now claims?

It appears that the claimant discharged the duties of the office of adjutant and inspector general from November, 1814; that up to March 6, 1816, he had charged and received the pay and emoluments to which he was entitled by law; that at this time there was no disbursing officer in the Quartermaster's department at the seat of government; and that, by reason of the regulation of the War Department then in force, prohibiting an allowance in money to be made to officers in lieu of their emoluments, a difficulty arose on the subject of fuel and quarters, when the Secretary of War issued the following order: "A commutation of double rations is allowed to the adjutant and inspector general, in lieu of fuel and quarters." Under this order the claimant received his double rations, in lieu of fuel and quarters, from November, 1814, up to the date of the order. He also gave credit to the government for the allowances he had received during all this time for fuel and quarters. This shows very conclusively that neither the government nor the claimant, at that time, considered that he was then entitled to that allowance which he now claims. He continued to make out his accounts according to this order, and to receive the same up to August 10, 1818, when the Secretary of War made the order of that date above recited, by which the commutation of double rations in lieu of fuel and quarters was prohibited, and the quartermaster general directed to furnish him with fuel and quarters, agreeably to his respective rank. From the termination of the first quarter, after the date of this order, he drew his pay and emoluments according to his rank, up to May 31, 1821, when the office was abolished, as appears by the letter of the Second Comptroller, dated June 10, 1831, which is made part of this report.

It has already been shown that, by the provisions of the law creating the office of adjutant and inspector general, that officer was given the rank, pay, and emoluments of brigadier general. He did receive this pay and emolument so far as the same was provided by law. The emoluments which were given to brigadier generals by Executive regulation were denied to the claimant because he was not embraced in them, and that they were not given him by those regulations; and whether those regulations did provide for him must depend for ultimate decision upon their terms and true construction.

The order of August 25, 1812, is, that generals commanding separate armies shall receive double rations. This order most obviously does not embrace the claimant's case. He at no time had the command of a separate army.

The order of February, 1814, is, "that general or other officers commanding districts shall, while so doing, receive double rations, which will supersede all other grants of double rations at posts within the district." There has been no evidence furnished us by which it is made to appear that the claimant was at any time ordered to take the command of a district, nor that he ever did take command of a district; so that he has failed to bring his claim within the range of this order.

The general order of March 6, 1816, is, that "generals commanding divisions, officers commanding military departments, and all officers while commanding permanent posts and garrisons separate from the

stations of commandants of departments, which subject them to the additional expense of independent commands, are allowed double rations. No more than one officer can be entitled to double rations at the same station." It does not appear that the claimant, at any time while he held the office of adjutant and inspector general, had the command of a division or military department, nor that he had the command of a permanent post or garrison which was separate from the station of the commandant of a department, and which subjected him to the additional expense of an independent command. He has failed to bring his claim within any one of the classes provided for in this order. It was necessary that he should bring himself within one of the description of officers provided for by the order itself, to entitle him to the benefits of its provisions. Having failed to do this, the provisions of the order were rightfully denied him.

The duties of the adjutant and inspector general do not consist in active military command, but in mere details of service. He should have shown that he had been ordered to take the command of a division, department, or permanent post or garrison, separate from the commandant of a department, which subjected him to the additional expense of an independent command. If this had been done he could have shown it, and no doubt would have shown it. The War Department would necessarily have known it, and the allowance would have been made him at the time, without objection. It was because this had not been done that his claim was at first disallowed by the accounting officers at the time, who must have known all the facts of his case. The department which made the several orders must have understood them. Those who made them were the best judges of their meaning, extent, and import; and their decision and construction ought, of right, to be decisive of the question.

The petitioner's claim is not, in our opinion, embraced by any of the Executive orders which have been placed in our hands. It would have been satisfactory to us, and saved a great deal of time and labor, if he had pointed out to us the particular order on which he placed his claim. This he did not do, which imposed on us the necessity of examining all the orders of the Executive on the subject. This examination has resulted in a full and perfect conviction that his claim has no existence either in law or Executive regulation.

In this opinion the committee are supported by the highest authority known to the laws and legislation of the country. The claimant did receive his double rations from the paymaster, Mr. Leslie, which he now claims, from the 30th of September, 1818, to the 31st of May, 1821. When he presented his account for final settlement at the department this part of it was disallowed to the claimant, and charged to his private account. Suit was brought against the claimant in the circuit court for the District of Columbia, to recover back from him the value of this part of his account, which had been thus received by him, and disallowed by the accounting officers of the department. The circuit court rendered judgment against him for the amount. He, by writ of error, removed the cause to the Supreme Court of the United States, where the judgment of the circuit court was affirmed. His right, under the laws and Executive regulations, was fully contested, examined, tried, and finally adjudicated. That he had no right to double rations was determined by the highest judicial tribunal of the country. This trial and judgment alone ought to be held as final, and conclusive of the claim. It was to have been expected, after this solemn and final judgment, that the claim would have been put to rest.

We might close our inquiry and examination here, but that the claimant puts his case upon other grounds. He contends that he is entitled to compensation upon principles of justice and equity. In placing it on this basis he tacitly yields the point that he is not entitled, by law or Executive regulation, to what he claims of the government. We have not been able to discover any very strong equity in his case. He received property of the government, to which he had no right. He was held to account for the same as any and every other citizen would and ought to have been. Justice and equity entitled him to his own and no more. He was, in justice and equity, entitled to receive the compensation which was allowed him by law. If he received more than this justice and equity required that he should refund it to the government. It was upon this principle that judgment was rendered against him. So far from his having a claim against the government, founded on justice and equity, the government have a claim against him, not only founded on principles of justice and equity, but in strict law. The President thought that the compensation allowed him by law was an adequate one. He was vested with a discretionary power. If the claimant had been entitled to more no doubt it would have been awarded to him. The President knew what his services were, and did not make any allowance. We can know but little, if any thing, of his services. He has shown us no equity, except we can see it in the fact that this allowance was made to others, and not to him. This gives him no equity. We are bound to believe that the allowance was made in all proper cases.

We might release the debt due by him; but we do not feel at liberty to bestow the public money in any such way. We think that the money is justly due by him, and that we might, with equal propriety, give the same sum to any other individual, as to give this sum to the claimant. He has, in our opinion, no foundation of claim in law or Executive regulation; much less has he a claim on principles of justice and equity.

The claimant insists that the Secretary of War has, since the first disallowance, and since the judgment of the court, admitted his claim, and that it should, on this ground, be paid him.

On the 9th of February, 1829, the petitioner's claim was presented to the accounting officer for adjustment, when the following indorsement was made on the vouchers by General Porter, then Secretary of war: "This account being for personal allowances to General Parker, as an officer of the army in the regular course of service, it should be settled upon the principles observed in the settlement of other parallel cases at that time." The claim was again rejected by the accounting officer, because there were no parallel cases which would warrant its allowance.

General Porter, by this indorsement, settled no new principle; he decided nothing by it. The settlement was to be made in conformity to the principles which had regulated the department in the settlement of accounts which were of a similar character. This is the full extent of his order. It appears that no case could be found which would, as a precedent, justify the allowance of this account. The accounting officer very properly rejected it. General Porter did not intend to make him any allowance, to which he was not entitled, either by law or Executive regulation. If such was his intention he failed so to express himself. It may very well be doubted whether the department could legally make an additional allowance to any officer nine years after he had quit the service. General Porter did not make any additional allowance. His indorsement confirms the decisions which had been made by the accounting officer, rather than reverses them. The case was left just where the Secretary of War found it. Its character or condition was in no degree changed by this order, if it can be called an order.

The claim was again laid before the War Department on the 8th of October, 1830, when the following indorsement was made on the account by Mr. Randolph, the acting Secretary of War at that time: "The principle of allowing a commutation for double rations, as well as for fuel and quarters, was established by regulation of the 12th of May, 1818, issued by Mr. Calhoun, the Secretary of War. This regulation was made applicable to General Parker's case by the decision of General Porter in January, 1829; and the late Second Comptroller admitted the claim to the amount of \$2,416, which was confirmed by his successor, Mr. Hill. There is no disposition to arrest these decisions, and the item which is allowed will pass to the credit of General Parker."

On the 14th of the following December it was again submitted to the Secretary of War, General Eaton, who indorsed on the account as follows: "General Parker's case having been decided by the acting Secretary of War, no further action appears necessary than for the Comptroller to pass the item to the credit of General Parker."

On the 31st of the same month General Parker's account was reported by the Second Auditor to the Second Comptroller, for \$742 83, an allowance in lieu of fuel and quarters, from the 6th of March, 1816, to the 31st of December following, which was disallowed by the Second Comptroller.

On the 21st of June, 1831, an account was reported by the Second Auditor in favor of General Parker for \$2,337 60, being for double rations paid him by Paymaster Leslie, and charged to his private account, and for which judgment had been rendered against him by the Supreme Court of the United States. This account was disallowed by the Second Comptroller.

The regulation of the 12th May, 1818, which Mr. Randolph, the acting Secretary of War, decides was made applicable to the claim of General Parker, is as follows: "Until otherwise ordered, the chief engineer, while resident at Washington, will be allowed at the rate of \$912 a year, in lieu of fuel and quarters. He will also receive double rations."

"The officers who compose the board of engineers will be allowed \$4 50 per day, in lieu of fuel, quarters, transportation, and per diem allowance for reconnoitering, while engaged in the duties assigned to the board."

"The officer whom General Swift may detail to aid in performing the duties of the Engineer department will be allowed \$1 50 per day, in lieu of quarters and fuel."

This regulation does not embrace the petitioner's claim. The committee cannot perceive that General Porter made this regulation applicable to it. He did not refer to it by name, date, provision, or in any other way. It is difficult to conceive how this regulation could be said to have been applied to this claim by anything that appears to have been done by General Porter. It very clearly appears that Mr. Randolph mistook the purport of General Porter's order altogether. He merely directed that General Parker's account should be settled on the same principles on which other parallel cases had been settled at the time. He merely directed as to the manner of making the settlement, and not with a view to make any new and additional allowance to him; nor did he direct that the account should be settled by conforming to any regulation not before applicable to his case. The regulation of the 12th of May, 1818, was not applicable to his case, nor did General Porter make it applicable to it; nor do the committee think that he could have made it, for the first time, applicable, after he had been nine years out of office. All that was done afterwards in regard to the settlement of this account was founded on this mistake, and was most clearly erroneous, and ought not, and could not, affect the rights of the government. We are called upon to provide for the settlement of the claim on principles of justice and equity. This brings the merits of the whole case before us, and we cannot entertain a doubt on the subject. The petitioner's claim for double rations cannot be allowed. This was the opinion of the officers of the department at the time of the transaction. Their opinion on their own orders and regulations is entitled to the highest respect. It was the opinion of the circuit court and also of the Supreme Court of the United States. If any question can be settled this one ought to be considered as settled. It has been judicially determined. This committee acquiesces in that decision as being in strict conformity to the facts of the case and the well-established principles of law and equity. The first point is thus disposed of by the committee.

As to the second point it is not deemed necessary to say much. The petitioner received all the emoluments and pay which were attached to the office of paymaster general of the army while he held and discharged the duties appertaining to it. He has shown no reason why any further allowance should be made him.

As to the third point, General Parker was arranged to the office of paymaster general, in the general order of May 17, 1821, announcing the new organization of the army. He entered upon the duties of this office and continued to discharge them until the close of the next session of Congress. His nomination, it is understood, was not laid before the Senate, or was withdrawn from the final action of that body, so that his public services terminated with the close of that session of Congress, in May, 1822. Was he disbanded under the act of the 2d of March, 1821? If he was, he is entitled to the three months' pay, as is provided in such cases by the 13th section of said act.

By the 12th section of this act the President of the United States is authorized to cause to be arranged the officers, &c., so as to form and complete out of the same the force authorized by the act, and to cause the supernumerary officers, &c., to be discharged from the service of the United States.

By the 13th section it is provided that there shall be allowed and paid to each commissioned officer who shall be discharged from the service of the United States in pursuance of this act, three months' pay in addition to the pay and emoluments to which he may be entitled at the time of his discharge.

The petitioner was not discharged from the service of the United States when he ceased to do the duties of adjutant and inspector general. If he had been he would have been within the provisions of the law. He was continued in the service for a year afterwards. He performed a year's service under the new law and received the pay. He does not come within either the letter or spirit of the law, and is not entitled to the three months' pay claimed by him.

The report of the Second Comptroller, under date of the 5th of June, 1834, is made part of this report.

The committee submit the following resolution and recommend it for adoption:

Resolved, That the claim of the petitioner ought not to be allowed.

TREASURY DEPARTMENT, *Second Comptroller's Office, December 22, 1834.*

SIR: I comply with your request of the 20th instant by transmitting herewith all the information in my possession relating to the claim of Daniel Parker, esq., late adjutant and inspector general of the army of the United States. The claim of General Parker has been repeatedly considered by the War Department and the accounting officers; and I have thought proper that the committee might be in possession of the entire history of the claim from its origin to the present time, to furnish them with a copy of a detailed report on the subject of the claim, made by this office to the Secretary of War on June 5, 1834. That the committee may understand the present situation of the claim, I transmit also copies of the President's letter to the Secretary of War of July 8, 1834, suspending for a time further consideration of the claim, and of the letter of the Secretary of War to this office of the same date on the same subject. No action of the Attorney General in the case has been communicated to this office subsequent to the date of the Secretary's letter.

It is proper to remark that the views I have taken of General Parker's claim have been with reference to the laws and regulations then existing. Of the justice and equity of the claim, as presented for the action of Congress, I have not felt at liberty to express an opinion.

I have the honor to be, sir, very respectfully, your obedient servant,

J. B. THORNTON.

HON. JOHN BANKS, of the Committee of Claims of the House of Representatives.

WAR DEPARTMENT, *July 8, 1834.*

SIR: I have the honor to transmit for your government a copy of an order made this day in the case of the claim of General Parker.

Very respectfully, your obedient servant,

LEWIS CASS.

J. B. THORNTON, Esq., *Second Comptroller of the Treasury.*

The Secretary of War will suspend further proceedings on the claim of General Parker until I return. In the meantime he will call upon the Attorney General for a full consideration of the whole case.

ANDREW JACKSON.

JULY 8, 1834.

TREASURY DEPARTMENT, *Second Comptroller's Office, June 5, 1834.*

SIR: In pursuance of an opinion of the Attorney General given in the case of Daniel Parker, late adjutant and inspector general, dated May 17, 1834, I have the honor to report the claim with the facts in the case, and also my views touching the equity and legality of the demand.

The Attorney General is of opinion that the final adjudication, so far as the Executive action is concerned, of all claims arising in the War Department is vested by law in the Secretary of War, acting under the authority of the President; that the allowance of any such claim by the Secretary of War makes it *imperative and obligatory* on the proper accounting officers to pass the same to the credit of the claimant; and also that it is competent for the Secretary of War to *reverse and countermand* the decision of the proper Comptroller when the balance comes before him on the report of that officer.

The source from which this opinion emanated entitles it to high consideration; and though militating against all my preconceived opinions of the relative duties and powers of the Secretary of War and the accounting officers, I should feel bound to consider it as settling the law on this point, were I not sustained by the opinions of former Attorneys General, Messrs. Wirt and Taney. But differing as I do in opinion from the Attorney General, and sustained in this difference of opinion by Messrs. Wirt and Taney, and believing, after a careful and attentive investigation, that the claim set up by General Parker is sustainable neither in law nor equity, I feel constrained, under a sense of my official responsibility, respectfully to report adversely to the claim, leaving it for you, should you coincide in opinion with the Attorney General as to the powers of the Secretary of War over accounts, and believe the demand of General Parker founded in law or equity, to reverse and countermand my decision. In taking this course I am governed by a sense of duty, not opinionated nor stubborn, but desirous that the law may be deliberately and definitively settled; and when so settled by your decision, if against my present convictions, I shall readily and cheerfully surrender my opinion and conform my actions to such construction of the law.

The following is the claim presented by General Parker:

DR.

The United States to Brigadier General D. Parker.

For allowance in lieu of quarters and fuel from March 6, 1816, (previous to which they had been paid by commutation,) to September 30, 1818, two years seven months and twenty-four days, at \$912 per annum, being the allowance made to Brigadier General Swift, chief engineer, while resident at Washington previous to the last date..... \$2, 416 00

In order to come to a correct understanding as to the merits of this claim it will be necessary to take a view of the facts on which it is predicated.

The office of adjutant and inspector general of the army of the United States was created by the act of the 3d of March, 1813. By this act it is provided that the adjutant and inspector general shall have the rank, pay, and emoluments of a brigadier general. To this office Daniel Parker was appointed, with the rank of brigadier general, from the 22d of November, 1814. The pay and emoluments of the officers

of the army are fixed by the act of 16th of March, 1802, and the act of the 12th of April, 1808. By the 4th section of the first mentioned act it is provided that the monthly pay of a brigadier general should be two hundred and twenty-five dollars, "which shall be his full and entire compensation, without a right to demand or receive any rations, forage, travelling expenses, or other perquisite or emolument whatsoever, except such stationery as may be requisite for the use of his department." By the 5th section of the same act it is provided "that the commanding officer of each separate post shall be entitled to such additional number of rations as the President of the United States shall from time to time direct, having respect to the special circumstances of each post." The act of the 12th of April, 1808, is an act "to raise, for a limited time, an additional military force." By this act it is provided "that each brigadier general shall receive one hundred and four dollars per month, twelve rations per day, or an equivalent in money; sixteen dollars per month for forage when not furnished by the public, and the rations to be twenty cents each." On the 25th of August, 1812, the President of the United States, under the authority of the 5th section of the act of 1802, issued an order "that generals commanding separate posts should receive double rations." In February, 1814, the following order was issued by the War Department: "It is ordered that general or other officers commanding districts shall, while so doing, receive double rations, which will supersede all other grants of double rations at forts within the district." On the 6th of March, 1816, the following general order was issued: "Generals commanding divisions, officers commanding military departments, and all officers while in the command of permanent posts and garrisons separate from the stations of commandants of departments, which subject them to the additional expense of independent commands, are allowed double rations; but no more than one officer can be entitled to double rations at the same station." General Parker performed the duties of adjutant and inspector general from November, 1814, and charged and received the compensation established by law for those duties until the year 1816, when a difficulty arose in regard to his fuel and quarters, upon which the then Secretary of War issued the following order: "A commutation of double rations is allowed to the adjutant and inspector general in lieu of fuel and quarters." Under this order General Parker claimed, and was allowed, double rations until the 30th of September, 1818. On the 10th of August, 1818, the Secretary of War issued an order to the following effect: "The reason of the allowance to the chief of the engineers and to the adjutant and inspector general in lieu of fuel and quarters no longer existing since the establishment of the Quartermaster's department, at the termination of the present quarter such allowance shall cease; and the quartermaster general will, on requisition, furnish them with fuel and quarters, agreeably to their respective ranks." After this, it appears, by the papers, that General Parker charged and received of Paymaster Leslie a commutation of double rations from the 30th of September, 1818, to the 31st of May, 1821, amounting to two thousand three hundred and thirty-seven dollars and sixty cents. This sum was allowed to Paymaster Leslie on the settlement of his accounts, and was charged to the personal account of General Parker. Some time after the settlement of Paymaster Leslie's account General Parker's account was reported for suit; an action was brought against him, and judgment was rendered in favor of the United States both in the circuit and Supreme Courts. The judge who presided at the trial in the Supreme Court took the following view of the case:

"The claim of the plaintiff in error to double rations rests altogether upon a correct construction of the 5th section of the act of 16th of March, 1802, and of the regulations and orders of the executive departments issued in pursuance of that section. The President of the United States has a discretionary power to allow such additional number of rations to officers commanding at separate posts as he may think just, having respect to the special circumstances of each post. The law granting this authority is not imperative, and, in the exercise of his discretion, the President may allow, or refuse to allow, additional rations, as, in his opinion, he may deem just. There can be no controversy about double rations if the President makes the allowance. He may issue the order himself, or it may be done by the Secretary of War with his approbation. No officer is entitled to the additional allowance unless he be commandant at a separate post, and then the claim must be sanctioned by the Executive. It is not contended, in the case under consideration, that the grant was made by the President. Double rations form no part of the regular and legal emoluments of a brigadier general, and can only be claimed under circumstances before enumerated. The record contains no evidence that the adjutant and inspector general was ever ordered to an independent or separate command. In the discharge of his ordinary duties he has no distinct command; his duties consist in details of service, and not in active military command. The order of the 16th of March, 1816, directing double rations to be allowed to officers commanding military departments is construed to relate to the geographical sections of the country into which the two divisions of the army are divided, which are deaominated departments, and does not relate to the law of the 13th of March, 1813, for the better organization of the general staff of the army.

"It is therefore the opinion of the court that the claim of the plaintiff in error is not sanctioned by the act of the 16th of March, 1802, nor by the regulations and orders of the executive department issued in pursuance of that law." Judgment in the circuit court affirmed.

After the decision of the Supreme Court, General Parker changed his claim from *double rations to fuel and quarters*, and retrospectively back to the year 1816, although he had charged and been allowed double rations from November, 1814, to September, 1818, as a commutation in lieu of fuel and quarters, under an order of the Secretary of War passed expressly for that purpose.

This claim was presented to the accounting officers on the 30th of April, 1825, and disallowed by them on the ground that he had received fuel and quarters by commutation under the regulation of the 6th of March, 1816, for the whole period embraced by his claim.

On the 9th of February, 1829, General Parker again presented his claim to the accounting officers, with the following indorsement on the voucher by General Porter, Secretary of War: "This account being for personal allowances to General Parker as an officer of the army in the regular course of service, it should be settled upon the principles observed in the settlement of other parallel cases at that time." The claim was again disallowed by the Auditor on the ground that there were no parallel cases to warrant its allowance. The Second Comptroller, Mr. Cutts, seems to have entertained a different opinion from the Auditor, and a correspondence took place on the subject of that difference, but no final action seems to have been had, for the account remained in the Second Comptroller's office in June, 1829, after Mr. Cutts had retired from the office and Mr. Hill had succeeded him.

On the 12th of October, 1829, Mr. Hill addressed a letter to the Third Auditor, stating, in substance, that a decision once made in this office was binding, unless predicated on error in fact, and requesting the amount of General Parker's account for fuel and quarters, \$2,416, to be passed to his (General Parker's) credit. No answer to Mr. Hill's letter seems to have been returned from the Third Auditor's office.

On the 4th of December, 1829, the Attorney General, Mr. Berrien, gave an opinion in the case, intimating that the decision of Second Comptroller Cutts was not final, inasmuch as the account remained in the office after he had retired. His opinion was adverse to the merits of the claim. On the 30th of the same month Mr. Hill informed the Auditor of the decision of the Attorney General, and remarked: "This information is given that you may be apprised of the fact that General Parker's claim is no longer under consideration in this office."

The case was subsequently referred to the War Department, and on the 8th of October, 1830, the following indorsement was made on the account by Mr. Randolph, acting Secretary of War: "The principle of allowing a commutation for double rations, as well as for fuel and quarters, was established by regulation of 12th May, 1818, issued by Mr. Calloun, the Secretary of War. This regulation was made applicable to General Parker's case by a decision of General Porter in January, 1829, and the late Second Comptroller admitted the amount in the case of \$2,416, which was confirmed by his successor, Mr. Hill. There is now no disposition to arrest these decisions, and the item, which is allowed, will pass to the credit of General Parker."

On the 14th of the following December Mr. Eaton, the Secretary of War, indorsed on the account as follows: "General Parker's case having been decided by the acting Secretary of War, no further action appears necessary than for the Comptroller to pass the item to the credit of General Parker."

On the 31st of the same month a statement of General Parker's account was reported by the Second Auditor to the Second Comptroller for \$742 83—an allowance in lieu of fuel and quarters from the 6th March, 1816, to the 31st of the following December—and was disallowed by the Comptroller.

On the 21st of June, 1831, an account was reported by the Second Auditor in favor of General Parker for \$2,337 60, being for double rations paid him by Paymaster Leslie, and charged to his personal account, and for which judgment had been rendered against him. This account was disallowed in the office of the Second Comptroller; and here the matter rested until the 17th of May, 1834, when the opinion of the present Attorney General was taken in the case; and on the 22d of the same month an account was reported by the Second Auditor in favor of General Parker for \$747 61, being an allowance in lieu of fuel and quarters from the 6th of March, 1816, to the 31st of December following. The residue of General Parker's claim refers itself to the Third Auditor.

According to my view of General Parker's claim, it is inadmissible, because he has received, under a regulation of the War Department, double rations in lieu of *fuel and quarters* for the same period he now claims "an allowance in lieu of fuel and quarters," to wit: from the 6th of March, 1816, to the 30th of September, 1818. To admit his present claim would be to give him a double allowance in lieu of fuel and quarters, which was not intended by the regulation of 6th of March, 1816; and not only not intended, but, to my understanding, expressly denied by the terms of the regulation. That the allowance of "double rations in lieu of fuel and quarters," granted to General Parker by the order of 6th of March, 1816, was intended by Mr. Crawford to be in accord and satisfaction for fuel and quarters, is evident from the terms of the order itself; that it was so considered by General Parker and accepted by him as such, is evident from his certificate accompanying his first account for double rations, in which he says, "*the charge of double rations includes the only allowance I expect in lieu of fuel and quarters,*" and from the fact of his having deducted from his charge for double rations the amount received by him on account of fuel and quarters in 1815; and that such was the understanding of Mr. Calloun in 1818, is evident from the terms of his order rescinding the "double-ration order" of Mr. Crawford, for he says, "the reason of the allowance (double rations in lieu of fuel and quarters) no longer existing since the establishment of the Quartermaster's department, at the termination of the present quarter such allowance will cease."

It was inadmissible under the order of Mr. Porter, because no parallel case existed to justify the allowance, and because the order was retrospective. The case of General Swift, relied upon by General Parker, was not parallel to his, because General Swift received his allowance under and by virtue of a contemporaneous regulation of the War Department, while there was no such regulation in favor of General Parker, but one forbidding it in express terms.

It was inadmissible under the order of acting Secretary Randolph, and the sanction of that order by Major Eaton, because the order is altogether retrospective in its operation, so far as it relates to any action of mine, and not only repeals the order of Mr. Crawford, but renders it inoperative in one of its essential provisions from the period of its date, and extends to General Parker a second allowance for fuel and quarters, which is expressly denied to him by the terms of the order. I am not aware of any principle or law which authorizes the Secretary of War to extend by regulation double *fuel and quarters* to any officer of the army; but, supposing he were authorized to do it, as in the case of double rations, yet the regulation must, as I conceive, be prospective, not retrospective, in its operation. In the case of Major Belton, President Jackson observes, in relation to the authority of the Executive to make allowances by regulation: "Under this authority, the President and the War Department may, in their discretion, attach to the command of particular posts an allowance of extra rations; but this measure must be prospective, not retrospective. Viewed in its true light, it is an act of subordinate legislative authority, the exercise of which should be regulated by the same principles that govern in ordinary legislation. No right to the allowance exists but from the date of the order establishing it, any more than the right to an increase of salary exists except after the date of the law which makes that addition. The circumstances that require the addition may have existed for some time previously; but the alteration is not, on that account, made retrospective, even by the legislature, whose power is plenary; still less should it be made so by the Executive, whose power is restricted. The idea that, if the circumstances justify the allowance at the date of the order, a claim to the same allowance, under the same circumstances, for a previous period cannot be denied, is particularly fallacious when applied to the authority to which Major Belton now appeals. When Congress authorized the President to increase some of the allowances they were then in the act of establishing, they cannot have intended that he should, at a future day, alter those allowances retrospectively, and make compensation for such as he might deem to have been insufficient. The rule established by them was to be the rule until modified by him, and was to be in force up to the date of the alteration. Such is the general principle on which Congress themselves act in changing the compensation of officers. It must be supposed to have been their intention that the President should conform to that principle in exercising the same power under their authorization. Even if the authority of the President were unlimited on this subject, it would still be necessary for him to adopt the principle as indispensable to the security of the government against endless contradiction, favoritism, and injustice in its action."

This appears to me to be the only legitimate doctrine in relation to the legal effect of Executive regulations, and emanating from that high source, I have felt safe in adopting it as the rule of my official action.

It is inadmissible on the principles recognized by the present Attorney General, because, according to his views of the powers of the Secretary he can reverse and countermand the decisions of the proper accounting officers only "when the balance is before him on the report of the proper Comptroller."

The claim of General Parker was disallowed by the accounting officers of the treasury in 1825, and the balance reported to the then Secretary of War, General Porter; and no further action seems to have been had on it till 1829, nearly three years subsequent to its disallowance by the Second Comptroller. It will not be contended, I think, much less presumed, that the balance was then before the Secretary, on the report of the Comptroller, within the meaning of the Attorney General, for the account had been returned to the Auditor, agreeably to a provision of the 5th section of the act of 1817, which provides "that it shall be the duty of the Auditors charged with the examination of the accounts of the War Department," to receive from the Second Comptroller the accounts which shall have been *finally adjusted*, and preserve such accounts, &c., where it had remained on file more than three years. It was therefore *finally adjusted*, and the decision of the Comptroller not subject to revision and reversal by the Secretary of War, even on the principle laid down by the present Attorney General; for if I rightly understand the Attorney General, he is of opinion that the Secretary can reverse the decision of the proper accounting officers only when the balance is before him on the report of the Comptroller, and upon the principle that there has not been a final adjudication of the claim.

Of the subsequent action of Second Comptrollers Cutts and Hill on General Parker's claim, I have to observe that it seems to have been the opinion of Mr. Attorney General Berrien that the action of the former was not final; and the latter revoked his opinion informally given. But I am bound to presume that the action of neither was final; for had it been, the amount of General Parker's claim would have been carried to his credit on the books of the treasury, and no further action of this office would have been necessary or required. Had the claim been finally settled and allowed by either of my predecessors, as it is supposed to have been by the acting Secretary of War, (Mr. Randolph,) by both, there would have been no duty left for me to perform in relation to it; but as it is brought before me for revision, I have considered it unsettled, *in transitu*, and have endeavored to decide upon its merits, agreeably to the laws and regulations then in force, according to the best of my understanding.

There is another point presented in this case by the opinion of Mr. Attorney General Butler that is worthy of consideration. I refer to the relative powers of the Secretaries, and the proper accounting officers of the treasury, over the final adjustment of claims wherein the United States are party. Mr. Butler is of opinion that the decisions of the Comptrollers, though final so far as the action of the accounting officers is concerned, are subject to be revised, reversed, and countermanded by the Secretary in whose department the claim may have arisen, when the balance comes before him on the report of the proper Comptroller; thus making the Secretaries the final and responsible accounting officers in the settlement of all claims originating in their respective departments. The opinion of Mr. Butler is predicated on that given by Mr. Berrien in the case of General Parker, or rather, he seems to have adopted the opinion of Mr. Berrien, instead of giving his own, for, in conclusion, he remarks, "this is a plain consequence of the principles established by my predecessor in the case before referred to."

Impressed as I am with a sense of the great importance of a correct decision on this subject, and believing that if the opinion of the Attorney General be considered as settling the law on this point, great inconvenience must inevitably result to the executive department and the whole accounting system of the government, and that the avowed object in creating the offices of the Second Comptroller and three additional Auditors, to wit: "the prompt settlement of public accounts," will be measurably defeated, I feel constrained to present the subject for your consideration. In doing this, I will first recite the opinions of Attorneys General Butler and Berrien, in support of the powers of the Secretaries to reverse the decisions of the accounting officers under the direction of the President; and also the opinions of Attorneys General Wirt and Taney, opposed to such powers. I will also advert to the report of the Secretaries of all the executive departments made to Congress in pursuance of a resolution of the Senate of the United States in 1816, to report a plan to insure the annual settlement of public accounts, and to the laws establishing the present organization of the accounting department.

Opinion of Mr. Attorney General Butler.

MAY 17, 1834.

"Sir: I have received the documents relating to the case of General Parker, referred to me by your letter of yesterday for the purpose of answering the question "Whether the acts and decisions of the former Secretaries and Comptrollers are sufficient to authorize and require the accounting officers to settle and allow the amount of General Parker's claim according to those decisions?"

"The opinion of the Attorney General, dated December 4, 1829, which is considered as settling the law in this case, so far as it was then before him, was intended to meet the two following questions: 1st, whether the decision of Comptroller Cutts was final, or might be opened for consideration? and, 2d, if it could be reconsidered, then whether General Parker was entitled to fuel and quarters claimed by him? On the first question that opinion was not quite definitive, because the real state of facts did not explicitly appear; but the general principle by which it was to be governed when the facts should be accurately ascertained were clearly stated. They are substantially as follows:

"1st. When the Comptroller has examined an account transmitted to him by the Auditor, and has certified the balance to the Secretary of the proper department, such decision of the Comptroller is final so far as the accounting officers are concerned. But, 2d, that decision may be reviewed and reversed by the Secretary of the proper department, acting under the authority of the President. And, 3d, although a prior Secretary of War has prescribed the principles upon which a settlement is to be made, it is competent to his successor when the amount is reported to him by the Comptroller [with] the proceedings.

"On the second question the opinion was explicit and decisive that the claim could not, with propriety, be allowed. After this opinion had been transmitted to the War Department, the following action appears to have been had: 1st. On the 30th December, 1829, the then Second Comptroller, Mr. Hill, communicated

the opinion of the Attorney General to the Third Auditor, for the purpose (as is stated in the letter of the Second Comptroller) 'of apprising the Auditor that General Parker's claim was no longer under consideration in that office.' 2d. On the 8th of October, 1830, the Acting Secretary of War, to whom the case seems to have been referred, made an indorsement on the account, allowing the charge of \$2,416 for quarters and fuel, in accordance with the decision of the former Comptroller, Mr. Cutts, whose decision he affirmed, and directing the item to be passed to the credit of General Parker. 3d. On the 14th December, 1830, the Secretary of War confirmed this decision of the Acting Secretary by a further indorsement, in which he remarks 'that no further action appears to be necessary than for the Comptroller to pass the item to the credit of General Parker.' 4th. The Second Auditor accordingly allowed General Parker \$742 83 on account of this item, the residue belonging to the accounts kept by the Third Auditor, and on the 31st December, 1830, reported it to the then Second Comptroller, who disallowed it on the ground 'that he knew of no principle of law or equity to justify the claim;' and to this opinion it would seem he still adheres. On this state of facts, I am of opinion that the acts and decisions of the former Secretaries of War are sufficient, until reversed and countermanded, to authorize and require the accounting officers to settle and audit the claim of General Parker for an allowance to the amount of \$2,416, in lieu of fuel and quarters. The decisions made by the Acting Secretary on the 8th October, 1830, and by the Secretary on the 14th December, 1830, having both of them been made after the opinion of the Attorney General had been received by the department, must be considered as proceeding upon the ground either that the decision of the Second Comptroller, Cutts, was final, within the principle of that opinion, or, if not so, that the claim was just in itself, and one that ought to be allowed, notwithstanding the opinion of the law officer to the contrary, or on both of these grounds. And on recurring to the indorsement of the Acting Secretary, it will accordingly be seen that he places his decision on the double ground that the claim was a proper one, and that it had been admitted by the Comptrollers, Cutts and Hill. But whatever may have been the ground of these decisions of the Secretaries, and whether they are right upon the merits of the case or not, they are, undoubtedly, so long as they remain in force, imperative and obligatory on the accounting officers. As the matter is yet unfinished, the Secretary of War has still the power to arrest the allowance by reversing and countermanding those decisions, or he may do so when the balance comes before him on the report of the Comptroller; but until such reversal takes place, they are to be followed by the accounting officers. This is a plain consequence of the principles established by my predecessor in the opinion before referred to."

Extract from the opinion of Mr. Attorney General Berrien.

"I should believe that the decision of the Second Comptroller was final, not liable to question by any other than the Secretary, acting under the authority of the President. But the Secretary must possess this power, or Congress would have placed him at the head of the Department of War to be subjected to the control of a subordinate officer of the treasury. When an account has been settled and certified by the Secretary, he is then to issue his requisition for the amount; and unless he is a mere machine, or liable to the control of his own or the subordinates of another department, he must be entitled, before he does so, to review, and, if need be, to reverse the decision of the Comptroller. If this were not so in the case under consideration, a subordinate officer of the Treasury Department might regulate the military allowances of the army contrary to the will of the Secretary of War and of the President of the United States."

Opinion of Mr. Attorney General Wirt.

"In the original organization of the Treasury Department the duties of the officers were designated specifically. There was one Auditor and one Comptroller. The duty of the Auditor is declared to be to receive all public accounts, and, after examination, to certify the balance, and transmit the accounts to the Comptroller for his decision thereon, with this proviso, that if any person be dissatisfied therewith, he may, within six months, appeal to the Comptroller against such settlement. *Here the right of appeal stops.* Here is no proviso to appeal to the President. With regard to the Comptroller, it directs that it shall be his duty to superintend the adjustment and preservation of all public accounts; to examine all accounts settled by the Auditor, and certify the balance arising thereon. No right of appeal from his decision to the President. The act of the 3d of March, 1809, makes it the duty of the Comptroller to direct the Auditor and accountants forthwith to audit and settle any particular account, and report such settlement for his revision and final decision. The act of the 3d of March, 1817, which introduces the present organization of the Treasury Department, assigns to the Third Auditor the duty of receiving all the accounts relative to the subsistence of the army, the Quartermaster's department, and generally all the accounts of the War Department other than those provided for by the act. It makes it the duty of the Second Comptroller to examine all the accounts settled by the Third Auditor; and it makes it the duty of the Third Auditor to keep the accounts which shall have been finally adjusted, and to preserve such accounts. Thus, in every instance, the decision of the Comptroller is declared to be final; and it is manifest that the law contemplates no further examination by any officer after such decision.

"Were it the intention of Congress to subject these accounts to the further revision and decision of the President, that intention would have been expressed. The truth of this position is illustrated by the act of the last session to provide for the settlement of the accounts of Daniel D. Tompkins, late governor of the State of New York. This act expressly provides that the proper accounting officers of the treasury be authorized to adjust and settle the accounts and claims of Daniel D. Tompkins on the principles of equity and justice, *subject to the revision and final decision of the President of the United States.* Where was the necessity of this express provision if all the accounts settled by those officers were already subject to the revision and final settlement of the President? Whether you look to the particular law alluded to, or to the general organization of the accounting department, it is, in my judgment, equally clear that the power ends with the accounting officers, and the President has no authority to interfere. It would be strange, indeed, were it otherwise. The office of President is ordained for very different purposes from that of settling individual accounts. The Constitution has committed to him the care of the great interests of the nation in all its foreign and domestic relations. He is commander-in-chief of the army and navy of the United States. He is to exercise the important power of reprieve and pardon throughout all our States and Territories. The great power of selecting ambassadors and making treaties is committed to him. The selection of consuls, judges of the Supreme Court, and all other officers whose

appointment is not otherwise provided for, and the filling himself all vacancies in the recess of the Senate, are among his great duties. He is required to watch over the state of the Union; to give Congress the information upon the subject; to recommend such public measures as he shall deem necessary and expedient; to convene Congress on extraordinary occasions; to receive ambassadors and other public ministers; to take care that the laws generally be faithfully executed, &c. How will it be possible for the President to perform these great duties if he is also to exercise the appellate power of revising and correcting the settlement of all the individual accounts which pass through the hands of the accounting officers? My opinion is, that the settlement made of the public accounts by the accounting officers appointed by law is *final and conclusive*, so far as the executive departments of government are concerned. If an individual conceives himself injured by such settlement, his recourse must be to one of the other two branches of the government—the legislative or judicial. If a balance be found against him by the disallowance of credits which he deems just, he may refuse payment and abide a suit, in which case he will have the benefit of the opinion of a court and jury. If a balance be found in his favor, but smaller than he thinks himself entitled to, his appeal is to Congress, where the representatives of the people will pass upon his claim."

Opinion of Mr. Attorney General Taney.

"None of the acts of Congress prescribing the mode of settling accounts and ascertaining balances look to a revision of the accounts by the President, except, perhaps, some laws passed for the relief of particular individuals, in which the power is expressly given. The general laws on that subject all seem to regard the decision of the Comptroller as final, and require the executive branch of the government to act upon it accordingly. The act of March 3, 1817, which established the present mode of settling accounts, directs the Third Auditor to certify the balances, and transmit the account with the vouchers to the Second Comptroller for his decision thereon. In the fifth section of this law the Auditor is directed to receive from the Comptroller the accounts which have been *finally adjusted*, and to preserve them with the vouchers and certificates. This law, as well indeed as those which preceded it on the same subject, appear to me not to contemplate any appeal to the President; and I think, therefore, that the decision of the Comptroller is conclusive upon the executive branch of the government, and that the President does not possess the power to enter into an examination of the correctness of the account for the purpose of taking any measures to repair the errors which the accounting officers, appointed by law, may have committed. The party that supposes that justice has not been done to him must seek relief in court when a suit is brought against him, or may bring his claim to the consideration of Congress; and these, in my opinion, are the only means of redress left to the party if the accounting officers have erred in their decision."

In April, 1816, the Senate of the United States passed a resolution requiring the Secretaries of departments to report jointly to that body a plan to insure the annual settlement of the public accounts. In their report, made in obedience to this resolution, the Secretaries, among other things, observe: "The laws organizing the Treasury Department specifically refer to that department the settlement of all public accounts. The power of revision, both as to accounts of the War and Navy Departments, was, and still is, reserved to the accounting officers of the treasury. The referring the settlement of all public accounts immediately to the Treasury Department has the recommendation of unity and simplicity in theory; while, were the settlement of public accounts to be made in the departments to which they respectively appertain, it might lead to the establishment of different principles in the settlement. In contemplation of law the Comptroller of the Treasury revises all the accounts of the government. By this organization money is paid upon the settlement of an account only after it has been revised by the Comptroller. Under judicious regulations the prompt and final settlement of public accounts may, upon these principles, be effectually secured; and there is peculiar force in the idea that the department charged with the *replenishment* of the treasury should have a direct control over the public expenditures." The committee recommended a new organization of the departments, and upon this recommendation the law of the 3d of March, 1817, was predicated and passed. The act of the 2d of September, 1789, creating the Treasury Department, specifically designates the duties of the officers thereby created.

It makes it the duty of the Auditor "to receive all public accounts, and, after examination, to certify the balance, and transmit the accounts, with the vouchers and certificate, to the Comptroller for his decision thereon; provided, that if any person whose accounts shall be so audited be dissatisfied therewith, he may, within six months, appeal to the Comptroller against such settlement."

The act of the 3d of March, 1809, provides "that it shall be the duty of the Comptroller of the Treasury, in every case where, in his opinion, further delays would be injurious to the United States, and he is hereby authorized, to direct the Auditor of the Treasury, and the accountants of the War and Navy Departments, at any time, forthwith to audit and settle any particular account which the said officers may be respectively authorized to audit and settle, and to report such settlement for his revision and *final decision*."

The act of the 3d of March, 1817, provides "that from and after the third day of March next all claims and demands whatsoever, in which the United States are concerned, either as debtors or creditors, shall be adjusted in the *Treasury Department*." The fourth section of this act provides that "the Second, Third, and Fourth Auditors shall examine the accounts, and certify the balance, and transmit the accounts, with the vouchers and certificate, to the Second Comptroller, for his decision thereon." The ninth section of the said act provides "that the Second Comptroller shall examine all accounts settled by the Second, Third, and Fourth Auditors, and certify the *balances* arising thereon to the Secretary of the department in which the expenditure has been incurred."

By reference to the opinions of the law officers of the government, who have been consulted upon subjects involving the relative powers and duties of the Executive Department and the accounting officers of the Treasury, it will be perceived that the opinions of Messrs. Wirt and Taney are, throughout, in accordance with each other, and altogether opposed to the opinion of Mr. Berrien, and the opinion of Mr. Butler, so far as he may have concurred with Mr. Berrien. It appears that Mr. Berrien was first consulted in the case of General Parker; and Mr. Butler, assuming as a fact that the opinion of Mr. Berrien settled the law in the case, seems rather to have adopted the opinion of Mr. Berrien than to have given his own upon that part of the subject regarding the powers and duties of the executive department and the accounting officers. The opinions of Messrs. Wirt and Taney are full on that point, and demonstrate, in

a clear and intelligent manner, by facts and arguments, to my present understanding unanswerable, that the decision of the Comptrollers, in all things appertaining to the public accounts, is final; and that from such decision there is no appeal to any executive officer.

This opinion, in my mind, is sanctioned and confirmed by all the laws which have been enacted upon the subject, and by the reasoning and views of the Secretaries of the departments, who, in 1816, in obedience to a resolution of the Senate of the United States, reported to that honorable body "a plan to insure the annual settlement of the public accounts." In this report three things seem to be conceded by the Secretaries: 1st, that by law all the public accounts were to be settled at the Treasury Department; 2d, that the decision of the Comptroller in regard to public accounts was final; and, 3d, that, for reasons which by reference to their report will appear, it was, in their opinion, expedient that such should continue to be the case.

In conformity with the report of this highly respectable committee, Congress passed the law before alluded to, of the 3d of March, 1817, "for the prompt settlement of public accounts."

Thus it appears that the laws establishing the accounting department of the government have committed to the Comptrollers the final settlement, so far as the executive action is concerned, of all claims wherein the United States are party, providing no appeal to the President, or Secretaries of the departments; that, by the cotemporaneous construction of the laws, the responsibility of finally deciding on all such claims is made to rest with them; and that such was the opinion of Attorney General Wirt in 1823, and Attorney General Taney in 1832.

If the contrary opinion prevail, it will be the duty of the Comptrollers to get the sanction of the Secretaries to all accounts before transmitting them to the proper Auditor, because he is required to receive them for preservation only after they have been finally adjusted; and because, otherwise, as in the present case, one great object of the law of 1817, "the prompt settlement of public accounts," will be defeated. But the law of 1817 requires "that all claims and demands whatever in which the United States are concerned, either as debtors or creditors, shall be settled and adjusted in the Treasury Department." The great object of referring the settlement of public accounts to the Treasury Department was to preserve a uniformity of principle in their adjustment; for the Secretaries in their report observe in relation to the subject, "were the settlement of accounts to be made in the departments to which they respectively appertain, it might lead to different principles in their settlement." What is the effect of the principles advocated by Mr. Berrien? To take from the treasury the settlement of accounts, and transfer their settlement to the Secretaries of the departments to which they respectively appertain, and thus defeat the law in its letter and intention. Such appears to me to be the plain and inevitable consequence of the principles laid down in the opinion of Mr. Berrien, and adopted in part by Mr. Butler.

But Mr. Berrien thinks the Secretary of War must possess the power to revise and reverse the decision of the Second Comptroller, otherwise a subordinate officer of the Treasury Department might regulate the military allowance of the army contrary to the will of the Secretary of War and of the President of the United States. I do not understand him to contend that the Secretary derives this power from the laws, but that it is a power necessarily resulting from the nature of his high executive duties. This doctrine appears to me to be fully and successfully controverted in the opinion given by Mr. Wirt. The accounting officers are *quasi judicial*, that is, their duties are of a judicial character, but their tenure of office is at the will of the President; they are removable by him at pleasure. The Secretary of War is the executive officer of the President. Under the Constitution and laws, he directs all the military allowances of the army; establishes, by regulations, where the laws have given him discretionary power, the allowances and compensation of the officers of the army; appoints his disbursing agents, advances to them the public money, and directs its disbursement. These duties and powers are purely executive in their character, except, perhaps, that of regulating the military allowances, which is confided to the Executive by law, and may well be considered a kind of subordinate legislation. At any rate, they belong exclusively to the Executive, and the accounting officers have no right to interfere with them. But when the money has been disbursed, it becomes the duty of the disbursing agents to render their accounts to the Treasury Department for settlement. The duty of the Secretary has now ceased, and that of the accounting officers commences. It is the duty of the accounting officers to examine the accounts; to see if the expenditures have been made in accordance with the laws and the regulations of the Secretary; and if so, to pass the amount to the credit of the disbursing agents. The duties and powers of the Secretaries are ministerial in their character, with the exception of regulating the military allowances by regulation in certain cases, which is legislative; those of the accounting officers are judicial; and each, in my judgment, is made, by the laws, *separate, distinct, and independent* of the other. Nor can I perceive any danger of the one interfering with the other. It is fair to presume that every public officer will discharge the duties confided to him honestly and faithfully, "not with merring judgment, but honestly;" and if so, where is the danger of the accounting officers interfering with the high and legitimate powers of the Secretary, to control the military allowances of the army, contrary to his will and that of the President. It is as much their duty to carry into effect the regulations of the Secretary as the laws of Congress; but, until further advised, I think it my duty to adopt the principle laid down by the President in the case of Major Belton, and give to them only a prospective operation. But the accounting officers are responsible to the President of the United States; and should any one of them, from a misconception of his duties, so act as to embarrass the administration of the executive departments, and persist in such action, the President has the power, and it would be his duty, to remove him from office. My view of the subject is that the accounting officers, so far as relates to the specific duties committed to them by law, to wit, the settlement of public accounts, are *independent* of the Secretaries; are *alone responsible* for the faithful performance of the trust; and that from their decision there is no appeal but to the judicial or legislative departments of the government.

There is a class of claims arising in the War Department over which, under the laws, the Secretary has all control. I refer to the contingencies of the service; but all other allowances must be fixed by regulations, which, according to the decision of the President, are prospective in their operation.

In consideration of the antagonist opinions of the law officers of the government, I have thought proper to take this view of General Parker's case, which I now respectfully submit for your consideration; and I repeat, that I shall feel authorized, and will cheerfully conform my official action to your construction of the law. It is important that the law in this regard should be definitively and finally settled, that the accounting officers may clearly understand their duties.

I am, sir, very respectfully, your obedient servant,

J. B. THORNTON.

23^d CONGRESS.]

No. 596.

[2^d SESSION.]

ON THE EXPEDIENCY OF PROVIDING IMMEDIATELY FOR THE RECONSTRUCTION OF FORT INDEPENDENCE, ON CASTLE ISLAND, BOSTON HARBOR, MASSACHUSETTS.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 3, 1835.

Mr. RICHARD M. JOHNSON, from the Committee on Military Affairs, who have had under consideration a letter from the mayor of Boston, acting by authority of the city councils, and a report of the Secretary of War, with accompanying documents, relative to the repair of the fortifications on Castle island, Boston harbor, reported:

This subject was referred to your committee at the last session of Congress, in connexion with a similar report of the War Department. Having had an opportunity at that time to give the subject a due examination, with a distinguished officer of engineers (Lieutenant Colonel Thayer) attending them in their room, by their direction, to explain the plan and estimates of the work, the committee are the better enabled to report promptly upon it at the present time.

The letter of the mayor of Boston represents the exposed and defenceless state of the city of Boston, its harbor, the navy yard at Charlestown, the immense amount of public property there deposited, and the private property of all kinds accumulated in Boston and the populous environs.

Owing to the decayed and dilapidated condition of the fort on Castle island, all this public and private property is in a most exposed condition, and liable to be destroyed by a *coup de main* of any hostile power.

There are two points on which the defences of Boston harbor depend, viz: George's island and Castle island. George's island is so situated as to command the outer harbor and main channel. Castle island, four miles nearer the town, commands the inner harbor, the immediate approach to the city and the navy yard, and Broad sound, so called, one of the outlets from the inner harbor to the sea.

Of these two points, Castle island, as being nearer the city, and in fact directly covering its approach, has been deemed the most important. It was selected as the site of a military work more than two hundred years ago, and from that time to this has been relied upon as the main defence of the harbor.

The present fortification was constructed in the early period of our government on the old foundation; but, like all the works of that period, it was built in a defective manner both as respects science and practical execution.

In the plan of fortifications for the defence of the most vulnerable and important points of the coast, it was always understood and laid down by the engineers of the United States that first-rate works were required for Castle island and George's island.

It has been for some time known that a thorough repair, amounting substantially to a reconstruction, was necessary to give Castle island the character of a substantial work, adequate to the defence of an important and an exposed point. It has been for two or three years admitted and stated by the most competent engineers of the government, that partial repairs were but a waste of money, and nothing has accordingly been asked but small sums to protect the edges of the island from washing away, and some local repairs alike necessary whether the renewal of the fortress be ordered or not.

But the board of engineers directed to examine the defences of Boston harbor, in the autumn of 1833, with a view to a final disposition of the subject, have reported the entire inadequacy of the present works; and their statements on this subject were orally confirmed to your committee by one of the members of the board, Colonel Thayer, by additional statements which it is not deemed expedient more fully to make public. The chief engineer, in his report of the 10th ultimo, communicating to the Secretary of War "the additions and improvements" recommended by the board, declares them to be "necessary;" and the Secretary of War, in his letter to the Speaker of the House of the 12th ultimo, observes, "that, judging from these documents, he is satisfied that without the repairs proposed the defences of the harbor of Boston cannot be rendered complete."

But after the inspection given by them to the chart of the harbor last winter, and from the representations of Colonel Thayer, in addition to the documents referred to them, the committee are constrained to say that the repairs proposed are not merely necessary to render the defences of Boston harbor complete, but that without them there will be for a considerable time no defences at all. The fort on George's island is but begun; five or six years must elapse before it is finished; and when it is done, it can command but one entrance. The fort on Castle island, which lies at the head of the other entrance, and commands the inner harbor, is in a state of decay which defies a partial repair.

The committee cannot hesitate, therefore, in the conclusion, that the thorough repairs recommended ought immediately to be commenced on the plan submitted by the board of engineers on the 13th of March, 1834, approved by the chief engineer, and communicated to the House by the Secretary of War on the 12th ultimo.

The harbor of Boston is unquestionably one of the points on our coast most requiring artificial works of defence. The water is bold; the approach comparatively easy; the roadsteads too far from the mainland to be commanded. The inner harbor contains at all times a great amount of shipping, being second in that respect to New York alone. Without dilating on the great amount of private property at risk, the committee would observe that there are now at the navy yard, in ordinary or on the stocks, four ships-of-the-line, two frigates, some smaller vessels, valuable deposits of timber, barracks, and all the expensive appurtenances of the newly completed dry dock and a naval establishment of the first order. It is presumed that the public property of all kinds collected there cannot be of less than from six to seven millions of dollars in value.

That the defences which guard the approach to such an establishment and a city so important as Boston should have been almost wholly neglected is matter of just surprise; and denning it necessary to take immediate measures to supply the omission, the committee report a bill in conformity with the suggestions of the department.

Boston, *January 27, 1835.*

Sir: The people here have learned with an extreme degree of concern and surprise that a proposition recommending an appropriation for the purpose of continuing repairs and improvements on the works on Castle island, in the harbor of Boston, had been rejected in one of the houses of Congress. The attention of the local authorities has also been especially drawn to this subject by a formal communication from two of the representatives of the State of Massachusetts now at Washington. I have therefore been instructed and authorized, by a unanimous vote of the city council of this city, to make to Congress such statements and representations as the exceedingly grave and pressing nature of this business may seem to require and demand.

In point of navigation Boston is now the second city of the Union. On the north and east side, and within rifle shot of the city, the government some years ago built a navy yard, now very extensive, valuable, and important; and so true is it that the town itself virtually lies on the ocean, that a frigate coming from sea can, with a fair wind and other favorable circumstances, (easily selected,) pass in front of the shipping of the place and anchor off this navy yard in one hour after a signal has been made for her. At the present time there is not a single gun of any calibre whatever mounted on any of the works intended to defend either the anchorage grounds or the approaches to the harbor. So that, in fact, the smallest cruiser of any enemy would have it in her power, immediately after making the land, to sail directly into the harbor and along the heads of the wharves, and in so doing, not receive a shot except from the field-pieces of the militia.

This, sir, is our situation; and certainly it is easy to conceive that a state of things may arise in this country that would awaken some feeling of uneasiness for the amount of public property now so deplorably exposed, and which would also probably lead to a hasty and profuse, if not improvident, expenditure of money.

The defence and protection of the shores can be left to the people; but I need not say that batteries constructed by scientific men, and provided with an appropriate description of artillery, furnish, in fact, the only means of assailing heavy armed vessels while under weigh with any tolerable prospect of success.

I beg also to add that the works on Castle island form a material part of the system of defence intended for these waters. They are indispensable for the protection of the inner anchorage, and as long as the northern entrance to the harbor remains open are equally so for the protection of the town and navy yard. The works are already in progress; but if an appropriation for the present year should be withheld, not only a delay, at this time peculiarly unfortunate, will take place, but the government will unavoidably sustain some loss from injury to materials and the interruption of arrangements. It is proper and necessary to add that the project of the repairs and improvements on this island has been recommended by the chief engineer and sustained by the Secretary of War.

Castle island is the gate of the harbor and the town, and within plain and easy sight of nearly all the wharves and three-quarters of the warehouses of the city. From about the year 1640 it has borne some kind of military work, adapted either to the wants of the day or the best that the science or the means of the period could produce. At the present hour there is not a single gun mounted on the island. This, I am inclined to believe, is a state of things which has not before occurred for a century and a half.

I beg to assure you, sir, that I have considered it my duty, on account of the vital importance and exceedingly urgent nature of this matter, to give you the trouble of this letter. I pray further to add that I shall feel extremely obliged to you to communicate its contents to the honorable the House of Representatives of the United States.

I have the honor, sir, to remain, with great respect, your most obedient and very faithful servant,
THEODORE LYMAN, JR., *Mayor.*

The Hon. SPEAKER of the House of Representatives.

23^D CONGRESS.]

No. 597.

[2^D SESSION.]

ANNUAL RETURNS OF THE MILITIA OF THE UNITED STATES FOR THE YEAR 1834.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 3, 1835.

WAR DEPARTMENT, *February 2, 1835.*

Sir: In obedience to the requisitions of the first section of the act of Congress of March 2, 1803, entitled "An act in addition to an act entitled an act more effectually to provide for the national defence, by establishing a uniform militia throughout the United States," I have the honor to transmit herewith abstracts of the general return of the militia of the United States, and of their arms, accoutrements, and ammunition for the year 1834.

Very respectfully, sir, I have the honor to be your most obedient servant,

LEWIS CASS.

Hon. JOHN BELL, *Speaker of the House of Representatives.*

Abstract of the general annual returns of the militia of the United States, by States and Territories, according to the act of March, 1803, for the year 1834.

The adjutant general says there are in the State 15 regiments—91 companies of infantry, and 17 companies of light infantry; the whole number of militia enrolled is probably about 3,500.

The adjutant general reports the aggregate 48,676; no returns from the 2d brigade, 1st division, and 1st brigade, 8th division. Reference has been had to the returns for the year 1832. An entire deficit in 9 companies in the 2d brigade of the 1st division. The adjutant general reports the aggregate greatly below the real strength of the militia of the State.

The governor reports no returns from several regiments, and says: "If a complete return could be had our militia would be at least 85,000."

The adjutant general reports the strength of but 2 brigades in the 1st division, which is not more than the 5th part of the strength of the State.

The governor reports the 1st regiment of infantry imperfect; the 2d only two companies returned; the 5th and 6th no returns received. The adjutant general reports the militia about 4,000 effective men. The first and second brigades not heard from.

R. JONES, Adjutant General United States Army.

R. JONES, Adjutant General United States Army.

23D CONGRESS.]

No. 598.

[2D SESSION.]

ON CLAIM OF AN OFFICER OF THE ARMY FOR REIMBURSEMENT OF EXPENSES OF
DEFENDING SUITS AGAINST HIM FOR ACTS DONE IN OBEDIENCE TO ORDERS.

COMMUNICATED TO THE SENATE FEBRUARY 3, 1835.

WAR DEPARTMENT, *February 3, 1835.*

SIR: I have the honor to transmit herewith certain documents showing the expenses incurred by Captain Jouett, of the army, in defending suits instituted against him for acts performed under the direction of this department. Should the Committee on Military Affairs deem it proper that remuneration should be made, I have to request that the necessary appropriation may be made in some of the bills pending before the Senate.

Very respectfully, your obedient servant,

LEW. CASS.

HON. THOMAS H. BENTON, *Chairman Committee on Military Affairs, Senate.*DEPARTMENT OF WAR, *Office Indian Affairs, January 28, 1835.*

SIR: The enclosed papers have been presented by Captain William R. Jouett, of the United States army, with an account for moneys paid by him for counsel fees and costs in two suits in which he was defendant, instituted against him for the seizure of whiskey introduced into the Indian country. The papers show that he was sustained by the instructions of this department, the law, and the judgment of the court. The account is, therefore, submitted, with a recommendation that an appropriation be asked of Congress for its payment.

I am, sir, very respectfully, your obedient servant,

ELBERT HERRING.

HON. LEWIS CASS, *Secretary of War.*FORT CRAWFORD, *October 20, 1833.*

SIR: The suits brought against me by the American Fur Company and Joseph Renville, in 1832, were removed from the Crawford county court to the United States circuit court for the counties of Crawford and Iowa, at the term of that court which commenced on the first Monday in this month. In the Fur Company's suit I obtained a judgment, and Renville's suit was continued until the next term of the court. The agent of the Fur Company is determined to take the case that has been decided up to the supreme court by a writ of error.

I employed Benjamin Mills, esq., of Galena, to defend the suits, and gave him \$300 in each case for his fee, amounting to the sum of \$600, for which I have taken his receipt, and forward it with the enclosures. I have also paid the clerk of the Crawford county court \$11 87 for his fees in the cases, the receipt for which is likewise forwarded with the enclosures sent herewith. The sums thus paid out amount together to the sum of \$611 87. I have to ask of you the favor to lay the enclosed papers upon the subject of those suits before the honorable Secretary of War, and to request him, if it can be done without a special act of appropriation, to have my expenses, already incurred, reimbursed to me; if that cannot be done, then I hope he will have the enclosed petition, with the papers accompanying it, laid before Congress at the opening of the approaching session, with his recommendation for the necessary appropriation. I think that, if the money can be reimbursed to me out of the contingent fund, it would be but an act of sheer justice to have it done; for it is a hard case for me to be harassed with vexatious suits for my official acts performed in obedience to orders, and have to advance my own money to defend the suits; and it will be still more oppressive if I shall have to wait for my remuneration until a bill for my relief can be passed through Congress.

The Fur Company will, most likely, take out their writ of error this winter, and I would be glad, inasmuch as I am wholly unacquainted in Detroit, for the United States district attorney for the Territory of Michigan to be directed to attend to the case before the supreme court if it shall be carried up; and I would acknowledge it as a favor if you would request the proper authority to have the necessary directions given for that purpose.

Please to do me the favor to acknowledge the receipt of this communication and the papers enclosed, and to inform me of the decision of the Secretary of War upon my application.

Respectfully, sir, your obedient servant,

W. R. JOUETT, *Captain 1st Infantry.*Colonel R. JONES, *Adjutant General.*

P. S.—I send you the letter of Mr. Mills on the subject of engaging his services in the suits, which I forgot to mention in the former part of this letter. It will show the reasonableness of the fee, and that it is what he has charged private individuals in similar cases, and you will do me a favor by laying it, with the other papers on the same subject, before the Secretary of War.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

Your petitioner, William R. Jouett, a captain in the army of the United States, would respectfully represent; That, in the month of July, 1832, while your petitioner had the command of Fort Snelling, on the Mississippi river, he did, in obedience to instructions, (copies of which accompany this petition,) cause the stores and packages of goods in two Mackinac boats then ascending the Mississippi—one the

property of the American Fur Company, and the other the property of Joseph Renville, one of the said company's traders, and both loaded with merchandise for the Indian trade—to be searched, on suspicion that ardent spirits were concealed among the stores in said boats contrary to law; that, upon such search being made, there were found in one of said boats eleven kegs of alcohol or high wines, and in the other five kegs; that he had the said sixteen kegs of alcohol or high wines taken out of said boats and stored away in Fort Snelling until further orders from the War Department should be given upon the subject; that, in doing this, he acted, as he conceived, and still conceives, in strict obedience to his instructions and in conformity to the laws of the United States; that the situation of the country on the northwestern frontier, at the time that the said searches and seizures were made, required extraordinary vigilance and exertion on the part of every public officer in the country to resist the hostile operations of the Indian tribes then at war with our government, and to preserve peace with those who had not yet engaged in hostilities; that the war with the Sacs and Foxes was then at its height on the frontier below where your petitioner was stationed in command, the excitement of which was felt and manifested among all the neighboring tribes; that the Sioux and Chippewas, with hostile intentions towards each other, were then in considerable force in the vicinity of Fort Snelling, menacing the tranquillity of that portion of the country; that your petitioner had long witnessed and deplored the deleterious influence of introducing ardent spirits among the Indians, and believed, at the time that he made the searches and seizures aforesaid, that if ardent spirits should then be introduced among them in any considerable quantity, the effect would, in all probability, prove seriously prejudicial to the interests of the country and the safety of the post which he commanded; that he was far removed from every possible source of relief or support in case of any sudden disaster, and without a sufficient force under his command to control the movements of the Indians in his neighborhood, should acts of violence and aggression once commence among them; that, under the then existing circumstances, he considered his situation as one of critical importance, and made every possible exertion to preserve the peace of that part of the country, and to be ready to act decisively upon the shortest notice in any emergency that might occur; and he warned the traders and agents of the Fur Company and other traders in the country of the danger of taking ardent spirits among the Indians, and of his orders, and his determination to execute them, to prevent a practice so prejudicial to the interests of the government and the peace and happiness of the Indians themselves; that when he found that neither warnings nor persuasions could influence, nor dangers deter the traders from violating the laws of the country at so critical a period, there was but one course left for him to pursue relative to the subject, and that was, faithfully to execute the orders and instructions he had received.

Your petitioner would further represent that, soon after the said searches and seizures were made as aforesaid, the said American Fur Company and Joseph Renville brought their several actions of trespass therefor against your petitioner, and held him to bail for his appearance in court to answer to the said actions; that at the late term of the United States circuit court for the counties of Crawford and Iowa, held at Mineral Point on the first Monday in October, 1833, one of the said suits, to wit, the suit brought by the American Fur Company, was called for trial, when your petitioner filed two special pleas of justification, to which the plaintiffs replied, and your petitioner demurred to their replications, upon which an issue of law was made up to the court, upon the trial of which the court gave judgment for your petitioner, to which decision the plaintiffs have excepted, and say that they will prosecute a writ of error from the supreme court of the Territory of Michigan; that at the same term the said suit, brought by said Renville as aforesaid, was continued until the next term of said court, to be holden on the first Monday in October next, when your petitioner will again have to attend for his defence of that suit; that from the importance of the suits, the situation of the country, the distance to travel to attend the court, and the great labor consequently attending the practice of the bar, your petitioner was compelled to pay liberal fees to secure the services of able counsel to aid him in his defence, for which he engaged Benjamin Mills, esq., of Galena, to whom he gave a fee of \$300 in each suit, amounting together to the sum of \$600, the receipt for which given by the said Mills accompanies this petition; that he had to pay to the clerk of the Crawford county court, where the said suits were originally commenced, for fees therein, the sum of \$11 87, the receipt for which also accompanies this petition; that if the American Fur Company shall prosecute their writ of error to reverse the decision given in their suit, your petitioner shall again have to employ counsel at Detroit, and incur a heavy expense in defence of the suit in the supreme court; and should the suit brought by said Renville ultimately be decided against your petitioner, he will have to pay the damages and costs recovered, which will probably not be less than \$1,200.

Your petitioner would further represent that the government ought not, in justice, to allow him to suffer pecuniary losses on account of acts performed by him under orders from his supervisors and the high responsibility of his duty as an officer of the army and the peculiar circumstances under which he is situated, nor suffer him to be harassed with troublesome and vexatious suits for faithfully discharging his official duty, without providing him with the necessary means to enable him to sustain his defence.

Your petitioner, therefore, most earnestly prays that a law may be passed appropriating the sum of \$611 87 for his relief, to remunerate him for the sums already paid out in the defence of the said suits; and that the further sum of \$2,000 be appropriated and placed at the disposal of the honorable Secretary of War, to be disbursed by him to defray such expenses and damages as your petitioner may hereafter incur by reason of the said suits, upon the proper vouchers being furnished by your petitioner. The last-mentioned sum your petitioner thinks necessary in order to provide against the possibility of a recovery being had against him in the suit brought by said Renville, and for the defence of the writ of error, should the Fur Company prosecute one, and the possibility of an ultimate recovery in that case should the decision of the circuit court be reversed. The prayer of your petitioner will be, he trusts, deemed just and reasonable, and the relief asked for granted; and, as in duty bound, he will ever pray, &c.

WM. R. JOUETT, *Captain 1st Infantry.*

FORT CRAWFORD, October 30, 1833.

DEPARTMENT OF WAR, May 28, 1822.

Sir: I enclose copies of an act passed at the late session of Congress, by the second section of which it is made the duty of military officers to cause the stores and packages of goods of all Indian traders, upon suspicion or information that ardent spirits are carried into the Indian country by said traders, to be searched, and prescribes the penalty if any such spirits be found.

You will enclose a copy of the act to each of the officers commanding military posts in and adjacent to the Indian country, and order them to attend strictly to the execution of the duty thereby imposed upon them.

I have the honor to be your most obedient servant,

J. C. CALHOUN.

Major General E. P. GAINES, *Louisville, Kentucky.*

True copy.

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

True copy from that in this office.

E. K. WILLIAMS, *Lieutenant and Assistant Adjutant.*

FORT SNELLING, *September 23, 1832.*

HEADQUARTERS WESTERN DEPARTMENT, *Louisville, Kentucky, June 12, 1822.*

SIR: I enclose herewith, for your information and government, an act of Congress approved 6th of May, 1822.

You will, upon the receipt of this instruction, and in future until otherwise directed, cause the stores and packages of all Indian traders, in Indian towns and on the frontier within the limits or vicinity of your command, upon suspicion or information that ardent spirits are carried into the Indian country by said traders, to be searched; and should ardent spirits be found in any such stores or packages of goods, you will cause such goods to be secured, labelled, and proceeded against, in strict conformity to the second section of the enclosed act of Congress; and you will attend strictly to the execution of the duty enjoined upon military officers by the above-mentioned act of Congress, as well by the act entitled an act to regulate trade and intercourse with Indian tribes, and to preserve peace on the frontiers.

I have the honor to be, &c.,

EDMUND P. GAINES, *Major General by Brevet, Commanding.*

COMMANDANTS of posts in and adjacent to the Indian country.

True copy.

GEO. A. McCALL, *Aide-de-camp, Acting Adjutant General.*

True copy from that on file in this office.

E. K. WILLIAMS, *Lieutenant, and Assistant Adjutant.*

FORT SNELLING, *September 23, 1832.*

ASSISTANT ADJUTANT GENERAL'S OFFICE, WESTERN DEPARTMENT,
Memphis, Tennessee, March 14, 1832.

SIR: You will receive herewith copies of a letter from the Secretary of War to Major General E. P. Gaines, of the 28th May, 1822, and of a letter from Major General E. P. Gaines to the commandants of posts in and adjacent to the Indian country, of the 12th June, 1822.

The commanding general considers the instructions therein contained ample and sufficient, and does not deem any further orders requisite to insure the strict execution of the duty enjoined upon officers of the army in their proceedings against Indian traders, in conformity to the acts therein cited.

The power with which you are vested by the enclosed letters should be made known to all persons concerned.

I am, very respectfully, sir, your obedient servant,

GEO. A. McCALL, *Aide-de-camp, Acting Assistant Adjutant General.*

The OFFICER OF THE UNITED STATES ARMY commanding Fort Snelling.

True copy from that on file in this office.

E. K. WILLIAMS, *Lieutenant and Assistant Adjutant.*

FORT SNELLING, *September 23, 1832.*

ADJUTANT GENERAL'S OFFICE, *Washington, September 15, 1832.*

SIR: Your communication of the 3d ultimo, addressed to the Secretary of War, in relation to ardent spirits found by you on board the boats of some Indian traders, which they were transporting to their trading establishments to vend among the Indians, contrary to law, and which you had seized upon, has been duly received; and, in reply, I have to inform you the general-in-chief directs that you will retain the ardent spirits until you are instructed by the War Department as to its final disposition.

I am, sir, very respectfully, your obedient servant,

R. JONES, *Adjutant General.*

Captain W. R. JOUETT, *1st Infantry, Commanding Fort Snelling, Upper Mississippi.*

GALENA, *September 20, 1833.*

DEAR SIR: I have just returned from my journey, and found your letter, upon the subject of the suits against you, in the post office at my return. In consequence of the pressing demands made upon my time, and the utter impossibility of my attending to the removal of the case by *habeas corpus*, I shall be obliged to have assistant counsel, for which you will only be charged, in addition to my own fee, what I

have to pay him. We shall then (both of us)-only charge the same fee which I received from Mr. Brunet in his case against Strat & Kearney. Indeed, I do not imagine any one would complain of paying \$300 in each suit when their importance is considered.

Yours, respectfully,

Captain Wm. R. JOUETT.

B. MILLS.

MINERAL POINT, October 12, 1833.

Captain Wm. R. Jouett to Benjamin Mills, Dr.

To defence of suit in the United States circuit court for the district of Iowa, M. T., American Fur Company vs. yourself, (trespass).....	\$300 00
To defence of suit in same court—Joseph Renville vs. yourself, (trespass).....	300 00
	600 00

Received payment October 12, 1833.

B. MILLS.

OCTOBER, 1833.

I hereby certify that I was necessarily engaged for the period of fourteen days in attending the district court of the United States, at Mineral Point, in defending the suit of American Fur Company against myself, in a case for trespass, and that the sum charged to cover my expenses is reasonable.

W. R. JOUETT, Captain 1st Infantry.

OCTOBER, 1833.

I hereby certify that I was necessarily engaged for the period of eight days in attending the district court of the United States, at Mineral Point, in defending the suit of Joseph Renville against myself in a case for trespass, and that the sum charged to cover my expenses is reasonable.

W. R. JOUETT, Captain 1st Infantry.

CRAWFORD COUNTY COURT, November Term, 1833.

AMERICAN FUR COMPANY,	}	Trespass.

Defendants' costs.

To copy of all the papers filed in my office in the above cases, to send to Mineral Point, \$11 87.

PRAIRIE DU CHIEN, October 5, 1833.

Received of W. R. Jouett \$11 87, being the amount of the above account.

J. BRISBOIS, Clerk C. C. C.

TERRITORY OF MICHIGAN, Counties of Crawford and Iowa, ss:

I, the undersigned, do certify that William R. Jouett paid \$3, the jury fee in the case of Joseph Renville against yourself.

ROBERT DOUGHERTY, Clerk I. C. C. pro tem.

FORT WINNEBAGO, August 1, 1833.

SIR: By a letter from Mr. Rolette, which I have just received, I am advised by him, as his counsel, to agree to the admission of Mr. Vail and Mr. Greenough, as witnesses in the cases in which they now stand as parties with yourself; for which purpose I will discontinue the actions as against them. But as Mr. Rolette's object is to obtain an immediate trial, which will be final, I am instructed that this arrangement cannot be made unless you cause the suits to be removed into the circuit court for trial in October next. This can be done by your counsel by application to the judge for a writ of habeas corpus C. C.; and I hope this proposition will be satisfactory.

With much respect, your obedient servant,

J. D. DOTY.

Captain W. R. JOUETT.

HEADQUARTERS 1ST INFANTRY, *Fort Crawford, July 15, 1834.*

SIR: Accompanying this you will receive a communication from Captain Jouett, of the 1st infantry, (forwarded through me,) in relation to several suits now pending against him for damages to a large amount in the United States district and circuit courts for the counties of Crawford and Iowa, held in the latter at Mineral Point, Michigan Territory, instituted against him by the American Fur Company on account of certain seizures made of a quantity of whiskey in 1832 which the agents of said company had introduced into the Indian country; the defending of which has already been the cause of involving him in considerable pecuniary losses, and asking permission to visit Washington in October next, with the view of trying to get relieved from the same, and, if necessary, to petition Congress for relief. Of the propriety and necessity of granting the permission asked for, the general-in-chief must be the proper judge.

It is very much to be regretted that when suits are instituted against subordinate officers of the army by wealthy and influential companies, (as in the present instance,) or by individuals, for a large amount of damages for the proper executing of orders emanating from the highest authorities known to our laws as regard military matters, that they are not properly sustained by those with whom such orders originate; instead of permitting them not only to be harassed by sheriffs and dragged from place to place to defend them in the best way they may, but to defray all the expenses attending to the same, which, in many instances, they are illy able to do; and as a last resort, should damages be recovered from them, they are compelled to petition Congress to relieve them from the same, as well as the expenses which they are necessarily compelled to be at, which in many instances are very great.

Very respectfully, sir, your obedient servant,

Z. TAYLOR, *Colonel 1st Regiment U. S. Infantry, Commanding.*

Col. R. JONES, *Adjutant Gen'l U. S. A., Washington City, D. C.*

FORT CRAWFORD, *July 15, 1834.*

SIR: I wrote you some time in November last on the subject of the suits which had been brought against me by the American Fur Company, and the expenses that I had necessarily incurred in their defence; in which communication I requested you to use your endeavors to get me remunerated either through the Quartermaster's department or by an application to Congress for relief.

I enclosed you a petition to Congress for that purpose, to be presented in case you should find that my accounts could not be paid without a special appropriation for the purpose. I have not been apprised that this communication was received by you, and am left in suspense as to the intention of the department to sustain me in the acts which I performed under orders and instructions from my superiors, and which have involved me in a course of vexatious litigation.

In one of the suits at the last October term of the court I obtained judgment on demurrer. Since that time the plaintiffs have prosecuted a writ of error to take the case to the supreme court of the Territory. Should the judgment be reversed, and the other case ultimately go against me, I shall be much harassed to liquidate the damages and costs which will be recovered; and I cannot expect the least indulgence from my adversaries, as there is no doubt that the agent for the company at this place, who manages the cases, will push them to the utmost extremity.

If I shall, in the end, be enabled to succeed in defence of both the suits, they will still, so long as they remain pending, be a continual source of expense to me, in addition to the amount that I have already paid out. I have already expended upwards of \$600, and I hope that the commanding general will use his exertions to prevent the burden from resting upon me.

In the depositions which I had taken in October last, to be read as evidences in the cases, it was clearly proven that the acts for which they were brought were performed by me in conformity to instructions of the late Secretary of War, Mr. Calhoun, and orders from the general commanding the western department; these instructions and orders made it my duty to carry the laws of Congress into effect for the prevention of introducing ardent spirits into the Indian country. My acts were done, as I conceived them, and as I still think, in strict accordance with the law.

I was at the time in command of the extreme frontier post; and it was then, if ever, necessary to be prompt and vigilant in watching over the intercourse with the Indians, and in making every exertion to preserve peace in that quarter.

I flatter myself that my exertions were not without some salutary effect upon the tribes in my vicinity, while those below were so extensively engaged in hostility with our people. I hope, therefore, that the department will see the justice of my claim to indemnity, and will relieve me from the pecuniary embarrassments which these suits have brought upon me.

In order to a proper adjustment of the business, I have to request that permission may be given me to visit Washington city after the next October term of the court, for the purpose of settling my accounts against the government. I desire this, inasmuch as I have heard nothing of the disposition that was made of my application last fall, or of the petition to Congress which was enclosed in my communication to you. I believe that it has been usual to grant such permission to officers similarly situated, and I hope that the same indulgence will be allowed to me.

I also sent you last fall a commission and interrogatories to take the deposition of Mr. Calhoun, to be read as evidence in the trials of the cases stated. I have not yet been informed whether the deposition has been taken. As it will be of the utmost importance to have his testimony on trial, as one of the cases brought by Renville stands for trial at next October term, I hope, should the deposition not have been taken, it may be done without delay, and transmitted, under cover, to me here, and that I may be advised as to what has been done with that part of the business.

I am of opinion, and am advised by counsel, that the testimony of Major Telfaferro, Indian agent at St. Peter's, will be material for my defence of the aforementioned suits. I understand that he intends leaving St. Peter's this fall, from his anxiety to visit his family. It will hardly be practicable to get him to attend the court, unless he should be directed to do so by the War Department. I hope, therefore, that you will do me the favor to call on the honorable Secretary of War, and request him to instruct Major Telfaferro to attend the next October term of the court at Mineral Point as a witness in my behalf.

I will acknowledge it as a favor if you will answer this communication at the earliest day.

Respectfully, sir, your obedient servant,

W. R. JOUETT, *Captain 1st Infantry.*

Col. R. JONES, *Adjutant Gen'l U. S. A., Washington.*

WASHINGTON CITY, January 26, 1835.

SIR: I have the honor to enclose an account of \$642 37 for defending two suits brought against me, one by the American Fur Company, and the other by Joseph Renville, Indian trader on the Upper Mississippi. The suit of the American Fur Company was tried in October, 1833, which I got judgment for cost; the suit brought by Renville was tried in October, 1834. I also obtained judgment for cost, and only claim what I have actually paid out.

These suits were brought for seizure of whiskey made by me when in command of Fort Snelling, in July, 1832.

I herewith enclose all the papers and documents in relation to the suits.

I have the honor to be, very respectfully, sir, your obedient servant,

W. R. JOUETT, *Captain 1st Infantry.*

HON. LEWIS CASS, *Secretary of War, Washington City.*

The United States to Captain William R. Jouett, United States Army, Dr.

October 5, 1833.—For clerk's fees, copying papers to be sent to the United States district court at Mineral point, Michigan Territory, voucher 1.	\$11 87
October 12.—For attorney's fees in defending two suits in the district court of the United States for Iowa county, Michigan Territory, at \$300 each, per voucher No. 2, herewith.	600 00
For this sum paid jury fee, per certificate No. 3.	3 00
1833.—For per diem allowance to cover expenses of attending the court at Mineral Point in October term of 1833, 14 days, at \$1 25 per day, certificate No. 4.	17 50
1834.—For per diem allowance in attending the court at October term of 1834, 8 days, at \$1 25 per day, certificate No. 5.	10 00
	642 37

I hereby certify that the account is accurate and just.

W. R. JOUETT, *Captain 1st Infantry.*

JANUARY 30, 1835.

I hereby certify that the suits of the American Fur Company vs. W. R. Jouett and J. Vail, and Joseph Renville vs. W. R. Jouett and J. R. Greenough, were removed in 1833 from the county court of Crawford county, Michigan Territory, into the circuit court for the counties of Iowa and Crawford, (the style of which, I think, is as above stated,) to which several suits the defendant filed special pleas of justification, justifying the alleged trespass under the several acts of Congress regulating trade and intercourse with the Indian tribes, and the several orders directed to him from the Secretary of War, as the commanding officer at Fort Snelling; the first of which suits was, at the October term of 1833, decided in favor of the defendant upon an issue of law under a general demurrer tendered, in the course of pleading, by said defendant, to which opinion of the court exception was taken, with how much seriousness, however, I know not. The second came for trial at the October term of 1834, in which the jury found a verdict of not guilty for the defendant. Given under my hand, &c.

D. IRVIN, *Additional Judge for Michigan Territory.*

WASHINGTON CITY, February 18, 1835.

I am requested to state that suits were brought against Captain W. R. Jouett in the circuit court of the United States for the county of Iowa, Territory of Michigan, for the seizure of certain boats with a small quantity of whiskey on board, bound for Fort Snelling, owned by the American Fur Company; in which suits the said Jouett has recovered judgment in the said court.

JAMES DUANE DOTY, *Attorney for the American Fur Company.*

23D CONGRESS.]

No. 599.

[2D SESSION.]

RECOMMENDATION OF MILITARY ROADS FROM GREEN BAY TO PRAIRIE DU CHIEN, AND FROM SAGINAW TO MACKINAC, IN THE TERRITORY OF MICHIGAN.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 6, 1835.

WAR DEPARTMENT, February 5, 1835.

SIR: In answer to the resolution of the House of Representatives of the 26th ultimo, respecting certain roads in the Territory of Michigan, I have the honor to transmit herewith a report from the quartermaster general, which contains the information called for.

Very respectfully, your most obedient servant,

LEW. CASS.

HON. JOHN BELL, *Speaker of the House of Representatives.*

QUARTERMASTER GENERAL'S OFFICE, *Washington City, February 4, 1835.*

SIR: In obedience to your order requiring an estimate, under a resolution of the House of Representatives of the 26th ultimo, "of the expense necessary to complete the opening of the military road from Green Bay to Prairie du Chien, in the Territory of Michigan, so as to allow the transportation of troops and military stores thereon when necessary; also the expense required to open a road from Saginaw to Mackinac, in the said Territory, for similar purposes," I have the honor to submit, in reply to the first clause of the resolution, a copy of the report of the commissioners who surveyed the route from Green Bay to Prairie du Chien, and to state that they did not furnish a detailed estimate, but in the concluding paragraph of their report express the opinion that the amount estimated by this department in 1833, (ten thousand dollars,) in addition to the balance of an appropriation remaining unexpended, would be sufficient to finish the work on the plan proposed.

In reply to the last clause of the resolution, I have the honor to state that a survey of the route of a road from Saginaw to Mackinac was commenced during the last season, but was not completed. Until the survey be finished, and the nature of the country known, it will not be possible to estimate with any degree of certainty the amount required to open the road. The work will be highly important in a military point of view, as there is now no direct communication by land between Detroit and Mackinac.

I respectfully recommend that an appropriation of ten thousand dollars be asked for, to be applied, should the Secretary of War consider it advisable, to commence the work during the ensuing season.

I return the resolution, and I am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

Hon. LEWIS CASS, *Secretary of War, Washington City.*

SIR: The commissioners appointed by direction of the Secretary of War to locate and survey the route for a military road from Fort Howard to Fort Crawford, *via* Fort Winnebago, have the honor to report that they have completed the duties assigned to them, and herewith transmit a map of the route selected.

Owing to the very limited knowledge of the country through which the route passes, a general examination has been necessary, especially between Fort Howard and Fort Winnebago. The little travelling has been blindly confined to the old Indian trails, which frequently lead by very circuitous and unfavorable routes, from point to point, visiting in their course villages and other points out of the general course of the line.

With such imperfect knowledge, nothing could have been taken as granted; and it became necessary to give a personal examination to the several routes thought the most practicable.

After due consideration the commissioners have not hesitated in giving the most decided preference to the route selected over all others named.

The other routes had under examination lie, for a considerable portion of their distance, on the left bank of the Fox river. The country generally is of a very inferior quality, and the labor and expense of opening the road would be much greater than on the route selected, owing to the marshy nature of the country through which it would pass. It is, moreover, still in possession of the Indian tribes, and will probably remain so for many years; and the numerous crossings of Fox river would at certain seasons of the year present serious obstacles.

On the other hand, the route by the head of the lake passes, in its whole extent, through lands of a very superior quality, soon to be in market, and destined in a few years to be occupied by settlers; the facility of construction is far greater than on either of the other routes, and the necessity of crossing the Fox entirely avoided.

Regarded in a military light as the means of communication between three distant military posts, its superiority is manifest; for it runs almost parallel to the natural boundary between the United States and the Menomonee and Winnebago tribes of Indians, entirely within lands possessed by the United States, with all the white settlements in its rear, and the country behind of such an open nature that communications can be established from either of the settlements to any point on the route.

The country upon the line admits of two general divisions; the wooded, extending from Green Bay to the head of Lake Winnebago; and the rolling prairie, extending from the latter point, with but few interruptions, to Fort Crawford.

Upon the first division the labor of construction will be considerable; where the road runs parallel to the river it has been found necessary to locate it upon its bank, to avoid an almost continuous swamp, commencing generally a few hundred yards from its bank, and running parallel to it.

This has made it necessary that a number of ravines, which perform the offices of drains to the swamps behind, should be crossed, requiring more labor in construction than any other equal portion of the route.

From the point where the route leaves the river to the head of Lake Winnebago, although quite heavily timbered, the ground is favorable, and more than half the labor on this portion has been already performed by the New York Indians in opening a communication between their old settlements and the reservation to which they are shortly to remove.

On the second division the labor and expense of construction is very small; with the exception of some causeways in the vicinity of Fort Winnebago, the labor is limited to cutting and grubbing through the groves and belts of woods upon borders of streams; the bridging is but trifling.

The commissioners would recommend that upon the prairies two parallel plough-furrows be run, to indicate the direction and width of the road, as the crosses put up must soon be destroyed, as many of them have already been, through the mere wantonness of the Indians.

On the prairies no other labor would be necessary than that of running the furrows; and the woods are nearly all open and clear of underbrush; and by inspection of the map it will be seen that a large proportion is prairie.

The prairie which is passed over at the distance of eighty-five miles from Green Bay is, without doubt, the continuation of the high prairie ridge extending without interruption from the head of Lake Winnebago to the Mississippi, and would furnish a more direct and open communication between Fort Howard and the Mississippi, should it be thought unnecessary to pass by Fort Winnebago.

From Fort Winnebago to the Blue Mounds a few obstructions exist in the immediate neighborhood of Fort Winnebago; but these form the only ones between that point and Fort Crawford.

At the Blue Mounds, distant about twelve miles from the Wisconsin, commences the elevated ridge, extending uninterruptedly to within a few miles of the point where the line crosses the Wisconsin. This ridge is the most remarkable feature in the country; it varies from a few yards to several miles in width, and separates the waters of the Wisconsin from those of the Platte, Grault, Pecktano, and other tributaries of the Mississippi.

On either side of this ridge the country is extremely broken, especially towards the Wisconsin, where it is only passable on the ridges that run from the prairie ridge to various points on the river. On the other side is the rolling prairie, extending throughout what is called the "mining country," and affording on its ridges, both towards the Mississippi and in other directions, good natural roads.

From this to Fort Crawford as favorable ground has been chosen as the broken nature of the country will admit of.

It is thought that the present appropriation, with what has been estimated for, will be sufficient to finish the work on the plan proposed; but it is supposed that if a greater width than twenty feet was given to the road in the timbered land between Fort Howard and the head of lake Winnebago, much advantage would result, as the surface of the earth would be exposed to the action of the sun.

Very respectfully, your obedient servants,

A. J. CENTER, *Second Lieutenant Fifth Infantry and Commissioner.*
T. D. DOTY, *Commissioner.*

23D CONGRESS.]

No. 600.

[2D SESSION.]

ON THE EXPEDIENCY OF MAKING ADDITIONAL APPROPRIATIONS FOR THE ARMAMENT OF FORTIFICATIONS.

COMMUNICATED TO THE SENATE FEBRUARY 7, 1835.

The Committee on Military Affairs, to whom was referred the resolution directing them to inquire into the expediency of increasing the appropriation for arming the fortifications of the United States, reported:

A letter from the Secretary of War, covering a communication from the colonel of ordnance, recommending that the additional sum of one hundred thousand dollars be appropriated for the object mentioned in the resolution; and the committee, concurring in that recommendation, have directed their chairman to move that the said additional sum of one hundred thousand dollars be inserted in the appropriation bill for the ordnance of fortifications.

IN THE SENATE OF THE UNITED STATES, *January 29, 1835.*

On motion by Mr. Benton,

Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of increasing the appropriation for arming the fortifications of the United States.

Attest:

WALTER LOWRIE, *Secretary,*
By W. HICKEY, *Clerk.*

WAR DEPARTMENT, *February 6, 1835.*

SIR: In answer to the inquiries contained in your letter of the 2d instant, I have the honor to transmit a report from the Ordnance department.

With a view to provide sooner than it could otherwise be done the necessary armament for the fortifications, and more particularly the gun-carriages, I think it would be expedient to make an additional appropriation of \$100,000 for the present year, to be applied to the armament of the fortifications.

Very respectfully, your most obedient servant,

LEW. CASS.

P. S. The resolution enclosed by you is herewith returned.

HON. THOMAS H. BENTON, *Chairman Military Committee, United States Senate.*

ORDNANCE OFFICE, *Washington, February 4, 1835.*

SIR: In answer to the letter of the Hon. Thomas H. Benton, enclosing the resolution of the Senate, instructing the Committee on Military Affairs to "inquire into the expediency of increasing the appropriation for arming the fortifications of the United States," I have the honor to report that to enable this

department to provide with greater promptitude the armament and supplies for the works on the seacoast, it is respectfully suggested that the appropriation for the present year be increased \$100,000.

On the propriety of this measure (vide reports and estimates of this department, duly recommended and approved by the proper authorities, in State Papers, volume 1, 1829-1830, document 2, pages 25 and 130, and the enclosed extract from a report made to the War Department on this subject.)

Although, with this additional aid, ten years will be required to complete the armament of the seacoast, yet unless, in the opinion of the proper authorities, circumstances may warrant a greater appropriation, the sum recommended under the present arrangements of this department is as large as can well be applied with a due regard to an economical and proper expenditure, particularly in the construction of gun-carriages.

I have the honor to be, very respectfully, your obedient servant,

GEORGE BOMFORD, *Colonel of Ordnance.*

HON. LEWIS CASS, *Secretary of War.*

Extract from a report from the colonel of ordnance to the honorable Secretary of War, dated November 22, 1830, which accompanied a special estimate for the service of the Ordnance department for the year 1831.

"*Armament of new fortifications.*—In the estimates of last year it was proposed to add \$150,000 per annum to the usual appropriation for this object, in order to proceed with less tardiness in arming and equipping new fortifications. In the report which accompanied that estimate (which may be found at page 129 of document No. 2 of the last session) all the details connected with the proposition were fully stated. And I beg leave to refer to that document instead of repeating the statements here. It may, however, be proper to remark that the fortifications which will be completed in 1832 will require an armament which cannot be furnished complete before the year 1850 without an increased appropriation. If the additional sum now proposed of \$100,000 per annum be granted, the armaments may be completed in the year 1840. These remarks refer only to such of the fortifications as have been recently constructed, or are now building, and do not include any of the contemplated works which are yet to be commenced. The proposition for an increased appropriation does not contemplate any extension of the fortifications. It is designed merely to provide the cannon, mortars, balls, shells, and their appendages, which are necessary for equipping those which have already been constructed, or which are now nearly completed. Fifteen years have been employed in the construction of these works; two years more, it is estimated, will complete them. The sums expended in the construction of them already amount to near nine millions of dollars, and when the works shall be completed will exceed ten millions. These works will remain useless for all the purposes of defence or protection until they are armed. With the present provision for arming them a period of twenty years will be occupied in equipping them. The proposition for an increased appropriation may therefore be regarded as presenting the single question whether it is expedient or inexpedient to hasten the equipments of the new fortresses, in order that they may be placed in a condition to fulfil the purpose of their construction within a period more or less short of twenty years.

"I will barely suggest, in addition, that a reference to the present aspect of public affairs abroad may present considerations worthy of notice when deliberating on the measure here proposed"

APPLICATION OF KENTUCKY FOR THE ERECTION OF AN ARMORY IN SAID STATE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 16, 1835.

EXECUTIVE DEPARTMENT, KENTUCKY, *Frankfort, February 5, 1835.*

SIR: I have the honor of transmitting to you the subjoined copy of resolutions of the general assembly of this Commonwealth, expressive of the opinions of that body in reference to the matter therein alluded to.

Very respectfully, &c.,

J. T. MOREHEAD.

RESOLUTION in relation to erecting an armory in the State of Kentucky.

Resolved by the senate and house of representatives, That our senators in Congress be instructed, and our representatives be requested, to use their exertions to procure an armory to be erected by the general government at some suitable point in Kentucky.

Resolved, That the acting governor be requested to send a copy of the above resolution to each of our senators and representatives in the Congress of the United States.

[2D SESSION.]

APPLICATION OF MASSACHUSETTS FOR THE REBUILDING OR REPAIRING OF FORT INDEPENDENCE, ON CASTLE ISLAND, IN BOSTON HARBOR.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 16, 1835.

COMMONWEALTH OF MASSACHUSETTS.

EXECUTIVE DEPARTMENT, *February 13, 1835.*

SIR: In compliance with the request of the legislature of this Commonwealth, I transmit to you a copy of "resolves respecting the present state of the fortifications on Castle island."

Very respectfully, your obedient servant,

J. DAVIS.

Hon. BENJAMIN GORHAM.

Whereas Fort Independence, on Castle island, in the harbor of Boston, has been heretofore chiefly relied upon for the defence of the said harbor and of the city of Boston, and is still considered indispensable to their security; and—

Whereas the fortifications upon said island are at present in a dilapidated and ruinous condition: Therefore—

Resolved, That the senators of this commonwealth in Congress be instructed, and the representatives requested, to urge upon the proper department of the government of the United States the importance and necessity of rebuilding or otherwise repairing the aforesaid works; and to use their exertions in Congress to obtain the appropriation that may be required for this purpose.

Resolved, That his excellency the governor be, and he is hereby, requested to transmit a copy of these resolves to each of the senators and representatives of this Commonwealth in the Congress of the United States.

HOUSE OF REPRESENTATIVES, *February 11, 1835.*

Passed—sent up for concurrence.

JULIUS ROCKWELL, *Speaker.*IN SENATE, *February 11, 1835.*

Passed in concurrence.

BENJ. T. PICKMAN, *President.*

Approved February 12, 1835.

JOHN DAVIS.

[2D SESSION.]

ON CLAIM OF AN ASSISTANT SURGEON OF THE ARMY FOR REIMBURSEMENT OF RENT PAID FOR PRIVATE QUARTERS AT TROY, NEW YORK, THERE BEING NO PUBLIC QUARTERS FOR HIM.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 16, 1835.

Mr. ANTHONY, from the Committee on Military Affairs, to whom was referred the petition of Sylvester Day, assistant surgeon in the United States army, reported:

That the petitioner was stationed as assistant surgeon in the army of the United States at Watervliet, in the State of New York, from May 1, A. D. 1822, till May 1, A. D. 1824; and that, owing to the occupancy of all the public quarters by other officers at that post, the petitioner was obliged to rent private quarters at Troy, for which he paid \$130 for the first year, and \$140 for the second; that he applied to the quartermaster general for the usual allowance of ten dollars per month for the above period of two years, but the charge was not admitted by the department, because he omitted to make a requisition for public quarters on the acting quartermaster, under the regulation of the army that "on the arrival of an officer at a post, if he be entitled to quarters, he shall immediately make a written requisition on the quartermaster, who shall in all cases furnish public quarters where there are any vacant." The petitioner, however, states that he did apply to Major Dalliba, the commanding officer of the post, on his arrival, but that the public quarters were all occupied; and he is corroborated as to their occupancy by Captain Crawford.

The committee would here observe, that although the account for rent was rejected by the quartermaster general for the reason above-mentioned, yet he concurs with the Secretary of War in stating "that there is as strong equity in his case as in that of Doctor Eaton, for whom an appropriation was made by Congress for rent of quarters on the 14th of January, 1833;" and the Secretary of War further remarks that "as the principal is already established that such an allowance is just, he sees no reason why it should not be extended to Doctor Day, who has long been in service, and is a meritorious officer."

Believing, therefore, that the petitioner is justly entitled to the usual allowance of ten dollars per month for quarters, the committee accordingly report a bill in his favor.

[2D SESSION.]

STATEMENT OF THE COST OF TRANSPORTATION OF ARMS AND OTHER MILITARY STORES FROM THE DISTRICT OF COLUMBIA, VIRGINIA, AND MARYLAND, TO PITTSBURG AND OTHER POSTS IN THE WESTERN COUNTRY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES FEBRUARY 16, 1835.

WAR DEPARTMENT, *February 13, 1835.*

SIR: In answer to the resolution of the House of Representatives of the 6th instant, respecting the cost of transportation of arms, &c., from this District, and Virginia, and Maryland, to Pittsburg and other posts in the western country, I have the honor to transmit herewith a report from the Third Auditor containing the information called for.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. JOHN BELL, *Speaker of the House of Representatives.*

TREASURY DEPARTMENT, *Third Auditor's Office, February 13, 1835.*

SIR: In pursuance of the resolution of the House of Representatives of the 6th instant, requiring "that the Secretary of War be, and is hereby, requested to communicate to this House a statement of the amount paid annually, and the price per pound, during the last five years, for the transportation of arms and all other military stores from Harper's Ferry, Baltimore, Washington arsenal, and any other posts or places in Virginia, Maryland, and the District of Columbia, to Pittsburg and other posts in the western country," referred by you to me, I have the honor to enclose herewith a statement exhibiting the amount annually paid, and the price per pound, for transportation of arms and military stores, &c., for the last five years, so far as the accounts settled and rendered to this office have been found to furnish the information required by the resolution.

I have the honor to be, most respectfully, your obedient servant,

PETER HAGNER, *Auditor.*

HON. LEWIS CASS, *Secretary of War.*

Statement exhibiting the amount annually paid, and the price for transportation of arms and other military and public stores, during the last five years, from Harper's Ferry, &c., to Pittsburg and other posts in the western country; prepared in pursuance of the resolution of the House of Representatives, February 6, 1835.

No. 606.

[2D SESSION.]

ON THE EXPEDIENCY OF PROVIDING FOR THE REPAIR OF FORT MIFFLIN, ON THE DELAWARE RIVER.

COMMUNICATED TO THE SENATE FEBRUARY 21, 1835.

IN SENATE OF THE UNITED STATES, February 21, 1835.

On motion by Mr. Buchanan, and by unanimous consent, Resolved, That the Committee on Military Affairs be instructed to inquire into the expediency of making an appropriation for the repair of Fort Mifflin and the adjacent pier battery, in the river Delaware.

ENGINEER DEPARTMENT, February 19, 1835.

SIR: In answer to the inquiry which the House of Representatives has directed its Committee on Ways and Means to make, as to the expediency of making an appropriation for the repair of Fort Mifflin and adjacent pier, in the Delaware, and asking your opinion of the practicability of the proposed repairs, the amount of appropriation adequate for that object, and their expediency in case of an unfavorable change of our foreign relations, I have the honor to report: That, since the entire destruction of Fort Delaware, near the debouche of the Chesapeake and Delaware canal, the approach to the city of Philadelphia by water is left entirely open, and as the island and adjacent country is too low to admit of the construction of temporary batteries, having the requisite "command" to prevent the "plunge" from large ships, the shores of the Delaware being uniformly, on the channel side, very low, this circumstance will compel us in case of immediate necessity to reoccupy positions higher up. These are Fort Mifflin and the pier mentioned in Mr. Binney's letter on the subject just referred to this office, and which "are well-situated to cover the city, the navy yard, and Frankford arsenal from the approach of ships and barges," and ought by all means to be occupied "in case of an unfavorable change in our foreign relations."

The following is the present condition of Fort Mifflin, viz: the scarps are in excellent preservation, the parapets and ramparts require considerable additions to suit them for artillery, all the platforms have to be rebuilt, the magazines refitted anew, furnaces rebuilt in part, the gates of all the entrances renewed, quarters, bakery, &c., refitted for the accommodation of the garrison.

As regards the battery on the pier nothing of it remains; it will, therefore, have to be rebuilt.

The department is unable, from the want of the necessary data, to prepare anything like a correct estimate of the amount of appropriation requisite to effect the object in view; but considering the extent of the work to be executed, I am induced to believe with some confidence that not less than \$75,000 will be required, and I accordingly respectfully suggest the propriety of recommending that amount.

With the great resources of Philadelphia at command, it is believed the repairs in question can be effected in six weeks from their commencement.

I am, with respect, sir, your obedient servant,

C. GRATIOT.

HON. LEWIS CASS, Secretary of War.

APPLICATION OF INDIANA THAT THE MILITIA SYSTEM OF THE UNITED STATES MAY
BE RENDERED MORE EFFICIENT AND LESS BURDENSOME.

COMMUNICATED TO THE SENATE FEBRUARY 25, 1835.

A JOINT RESOLUTION on the subject of the militia.

Be it resolved by the general assembly of the State of Indiana, That our senators in Congress be instructed, and our representatives requested, to use their best exertions to procure the passage of a law, the provisions of which shall limit the enrolment of the militia to the able-bodied free white male citizens of the United States between the ages of twenty-one and forty years, and provide for the more speedy arming and better disciplining the militia of the several States by the general government, with such other provisions as Congress in their wisdom may thing proper to adopt, in order to render the militia system more efficient and less burdensome.

Resolved, That his excellency the governor be requested to forward a copy of this resolution to each of our senators and representatives in Congress.

JAMES GREGORY, *Speaker of the House of Representatives.*
DAVID WALLACE, *President of the Senate.*

Approved February 7, 1835.

N. NOBLE.

No. 608.

[2D SESSION.]

ON THE EXPEDIENCY OF ESTABLISHING A NATIONAL FOUNDRY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1835.

Mr. W. COST JOHNSON, from the select committee who were appointed "to inquire into the propriety of establishing a national foundry for the purpose of fabricating ordnance of various kinds suitable to the wants of the general government," reported:

To fortify and strengthen its natural position and to build up defences against foreign aggression must be considered true policy in every government, but especially does it belong to the federal government of the United States to promote the general welfare and provide for the common defence; the very origin and end of the Union was for this. Composed of a number of representative democracies, while they reserved to themselves all the powers necessary for their municipal concerns and all the rights conservative of independent sovereignties for a common purpose and the common weal, they created a general government, and vested it with all the powers necessary, appropriate, and incident to a republic. With a wide and almost unlimited territory; with a seaboard extending from the frozen regions of the north to the sultry climes midway of a continent; with the whole coast indented by spacious and almost inland seas, offering access to the far interior by bold, navigable rivers, no country ever possessed more natural advantages improvable for its defence; no country ever required fortifications more; and perhaps there is no country over which the protecting arm of its government has been so feebly stretched.

It is not the purpose of the committee to inquire into the causes which have operated to retard the improvement of the natural facilities of defence. Be these causes what they may, disasters have already been the consequence of the delay. Had the valedictory admonition of the father of his country been duly regarded, much blood and treasure would have been saved the nation—no marauding enemy (as was the case during the last war) could have entered our bays, inlets, and rivers with impunity; have laid our cities under contribution; plundered our towns; annoyed the inhabitants of the whole seaboard with petty warfare; and never would the disgrace have fallen on the nation of having had this very capital sacked, pillaged, and left a heap of smoking ruins. It was these occurrences, however—this dear-bought experience—that induced the adoption of that system of defence by which fortifications have been and are now being erected at the most exposed and commanding positions along our whole frontier. But judicious as was the adoption of that system, efficiently as it has been carried into operation in the location and construction of those defences, what, after the length of time which has been spent and the millions which have been appropriated, is the present condition of our fortifications? and how far are they capable of subserving the purposes for which they were designed and constructed?

To enable them to answer these inquiries the committee have sought information from sources which they deem eminently entitled to consideration, and with deep anxiety they learn that there are no fortifications furnished with a full and complete armament, and scarcely any in a state of defence.

By reference to the accompanying report from the Secretary of War (Nos. 2 and 3) it appears that the number of guns required for the armament of the fortresses completed and in progress of completion is 6,632 of the calibre of 24 and 32-pounders; the number in possession of the government, including the old patterns, which are of doubtful utility, is 2,633, leaving the total number now required for the fortresses alone three thousand nine hundred and ninety-nine. Besides, there are required for necessary field trains, to be deposited in various sections of the Union, eight hundred and fifty pieces. It will also be seen that

the number of shot required, allowing 250 per gun, is 1,658,000, while the number in possession of government is only 137,746, leaving the total amount of shot required at this time *one million five hundred and twenty thousand two hundred and fifty-four*. Moreover, it will be seen that under the most liberal appropriations, allowing all possible zeal, good faith, and exertion on the part of those engaged in fabricating ordnance, it would take at least *four* years to supply the necessary amount for the *fortresses* now completed, and perhaps twice that time to supply the fortifications in progress of completion, independent of the large amount continually required to render our naval marine efficient and to provide those field trains, so serviceable, if not so absolutely necessary, to resist a hostile invasion.

Under these circumstances what would be the condition of the country in the event of a sudden war? Those very forts which have been erected at such expense could not be put in a state of defence but would fall an easy conquest to any enemy, and, instead of affording protection to our own people, would become *depots* and citadels to the enemy from whence to send forth their marauding parties or to concentrate their forces for bolder enterprises.

Taking this view of the subject and remembering the difficulties under which this government labored during the last war, the immense sacrifices which were made of blood and treasure and other disastrous consequences of our imprudence, the committee are unanimously of opinion that no further time should be lost, but that the government ought to take immediate steps to provide full armaments for our fortifications, and to supply not only the present and contingent demands for our navy but also to furnish field trains and other ordnance to be distributed in the manner suggested by the prudent foresight of the Secretary of War; and to accomplish these purposes the committee are entirely convinced that the establishment of a national foundry is not only appropriate and expedient, *but absolutely necessary*. Without entering into a detailed argument to show the advantages which would accrue from such an establishment or to point out the impolicy of the government depending upon its present limited and precarious means of supply, the committee take leave to refer to the accompanying documents, (marked No. 1 to No. 14, inclusive), as embodying the strongest, most cogent, and conclusive reasons for the establishment of a national foundry.

Should Congress regard it unwise at this time to adopt a plan for the full and efficient protection of the forts and fortifications, which have already cost the nation more than twelve millions of dollars, and for the construction and repairs of which it appropriates about a million of dollars annually and should determine that the present amount of appropriation for the Ordnance department, which is about ninety thousand dollars annually, is sufficient, the committee are still of the opinion that the policy of establishing a national foundry is not less absolutely necessary.

A brief glance at the past and a slight view of the present history of our means of national defence and security will give abundant testimony of the propriety of adopting some more *systematic* mode of protection.

The nation does not now own a national foundry, nor has it ever had one.

During the revolutionary struggle it depended for its arms of every kind almost entirely upon France or upon rescuing them by battle from the enemy.

Those which the nation bought were for the most part old and nearly worn out cannon—the refuse of the French army—which are now only valuable for the reminiscence of the past.

The want of supply of good arms for the army during the revolution induced General Washington, early in his administration of the executive department of the government, to call the attention of Congress to the subject of establishing national factories for the fabrication of arms. Several laws were passed on the subject: one authorizing the Executive, in his wisdom, to establish a national foundry for the purpose of manufacturing cannon. The Executive did not deem it expedient to carry the law into effect at that time, upon the grounds that the nation had incurred a vast national debt, the finances of the country were deranged and limited, the nation had but few forts and fortifications and a very inconsiderable navy; but, by his recommendation, two factories were established for the purpose of making small arms, one in Springfield, Massachusetts, the other at Harper's Ferry, in Virginia. Although the mechanics of this country had much less experience in the mode of making firearms than those of Europe, yet, by the power of native genius and the experiments authorized by the government, we have now two factories which make the best rifles and muskets in the world.

The most experienced transatlantic officers and artisans admit that the muskets and rifles now made in the United States are superior, in point of finish and usefulness, to the best made in Europe.

So perfect and improved has been the system adopted in our factories that we have accomplished what a board of French officers pronounced a desideratum that was impossible. A board of French officers thought that it was impossible to so make all the parts of a musket that a part of the work made for one musket would suit and fit the residuary part made in another shop or factory, and by different hands; that the springs and the screws made to suit a given lock could not be made with such uniformity and precision as to answer for the corresponding parts of a different lock. If a part of a musket was lost or injured there could not be taken a similar part of another and make it quadrate with all its uses, but would be compelled to discard the musket or employ the aid of a mechanic. Such is, or has been, the fact with the arms made in France because the filings of the various parts are regulated chiefly by the eye. This is not the case in our national factories. The system of machinery is reduced to such perfection that every part of a musket is made with such nice precision and accuracy that every screw or spring made for a given part or purpose will fit every musket or pistol that is made in each of our factories.

Take any part of a musket made in the Springfield factory and it will be precisely, in every particular, like those parts made at Harper's Ferry. All the parts of two muskets may be taken asunder, though one be made at Harper's Ferry and the other be made at Springfield, and thrown into one indiscriminate mass, and there may be taken from the heap thus blended, at random, the component parts of a musket, and these put together, and the musket thus formed will be as perfect as precision can be, although half of the musket may have been made at one factory and the other moiety made at a different factory. The chief of the Ordnance bureau has frequently tried, with success, the experiment. Hence a musket or a pistol made in the public factories of the United States is almost indestructible, for from the fragments of arms on a battle field there can be put together readily a musket as perfect as when first made.

Of muskets of this kind the government has in depot about one hundred thousand. The English government has in depot about a million of muskets. The French a like number.

The improvement made in the rifle is still greater. The common rifle can be loaded and discharged

but twice in a minute, whilst Hall's rifle, made at Harper's Ferry, which receives the load at the breech, can be loaded and discharged eight times in a minute.

These vast improvements in the construction of machinery and in the improvement of small arms are owing to the fact of the government establishing factories and authorizing the trying of experiments in science, which have resulted in valuable improvements in the arms, and in greatly reducing the price of cost.

Might we not expect similar and highly beneficial results in the improvement of the materials, and in the fabrication of cannon, if the government had a foundry of its own? As cannon is most costly, (for a 42-pounder costs \$520, and other cannon costs nearly \$6 per cwt.,) is it not of the greatest moment that the government should possess such as are of the most durable and approved quality, and have an abundant and ready supply made in the best possible manner?

Private individuals have not a sufficient inducement to procure the best materials, and to try experiments essential to the fabrication of cannon of the best quality; nor can it be expected from individuals, however patriotic they may be, that they will expend largely their private fortunes in testing unprofitable experiments in combining and testing the strength of various metals, for which the government is not authorized to reimburse them.

In one point of view, especially, the committee conceive the present mode of depending on individuals for a supply of ordnance is objectionable. Foundries owned by individuals may at any time be placed beyond the reach and control of government; and in time of war, or upon any sudden emergency, even the case might occur that the secret agents of an enemy or of a foreign power might obtain the control or ownership, and then close them against the government itself.

Experience has proved that an iron cannon can be discharged but about twelve hundred times with a full charge without encountering imminent hazard. It is then only fit to be broken up and cast into balls, or used for other purposes.

It has been stated upon the authority of a scientific English author (Dr. Tredgold) that, by combining with iron five per cent. of copper, cannon can be made which will sustain one-fifth more gradual pressure, or pressure by percussion, than when made of iron alone—an improvement of the highest interest and importance. Although this fact has been known to the head of the Ordnance department, and he has been anxious for two years to fully test its truth, yet he has not been able to do so from the fact that the government, which has so deep an interest in the subject, has not a foundry. An experiment which he authorized, on a very small scale, has most abundantly realized the accuracy of the author's views.

For field cannon, it is of the greatest importance that they should be as light as possible to be safe and useful, so that they can be moved, when necessity may require it, with promptness and celerity; and likewise be of the best materials, for the explosion of one piece of cannon will create more alarm in the time of action among soldiers than a charge from the enemy's columns.

As far as the committee have extended their inquiries on the subject, they have found one general sentiment among the officers of the army and navy, that most of the cannon owned by government are unfit for service, and that the supply which the nation has is clearly disproportionate to the requirements and security of the government, if even lulled into the profoundest enjoyment of universal peace. No wisdom can foresee at what time the nation, though now at peace, may be engaged in hostilities.

But a few years ago the Ordnance department desired to have cast a small quantity of brass cannon. The contract could not be taken because the amount desired was not sufficient to justify the proprietors of private foundries in sending to England for experienced mechanics in this occult branch of casting, and this country did not contain artisans who possessed the necessary knowledge and experience.

Some few brass cannon have since been made, and although they have generally withstood the test of trial, yet they are regarded as inferior, and are rough in grain and finish; nor has there ever been made in the United States a brass cannon of the largest magnitude that has been pronounced equal to those made in England.

The committee are of the opinion that economy in the cost of ordnance is less to be consulted by the government than the good quality of the cannon. But whether economy or the good quality be the object to be attained, they are led by the information laid before them to the conclusion that, by the establishment of a national foundry, both of these objects would be effected in an eminent degree.

The committee, being of opinion that a national foundry ought to be established, recommend that it should be done as early as practicable, and in the most efficient manner; and they think no place could be selected combining so many advantages as the District of Columbia. Here a national foundry would be within a territory exclusively under the jurisdiction of Congress; central, in a great degree, as respects the several States, it would be accessible and convenient to all by means of navigable tide water, and the facilities of communication afforded by the Chesapeake and Ohio canal and the Baltimore and Ohio railroad, connected as these great works are, and will be, with others which traverse every section of the Union. The Potomac river would supply any quantity of water which would be required to propel the machinery, and the best ore and coal, with every other species of material, may be obtained at the smallest expense from inexhaustible and contiguous sources.

The Antietam iron ore is, perhaps, superior to any in the United States for the purpose of ordnance. It requires no admixture with any other ore, and is of a kind peculiarly suited to the purpose. The quantity of ore is abundant to meet any demand that might be made for it. It is situated immediately on the Potomac river, and the ore bank on the Maryland side of the river is penetrated by the Chesapeake and Ohio canal.

The following extract from the very able and intelligent letter (No. 5) of Captain Jones, who has been for several years inspector of ordnance, will better exhibit the quality of this ore:

"It does not often happen," he says, "that iron produced from any one ore possesses all the qualities requisite for gun-metal. One will be a little too hard, another too soft; one a close, compact, brittle grain, and another open, or porous and weak, &c. Hence the necessity, as a general rule, of mixing or combining two or more kinds of iron to produce what the founders term *gun-metal*; and hence arises one of the great difficulties and uncertainties attending all first efforts at cannon casting. An exception, however, to this general rule, as regards the necessity of mixing different kinds of iron to make strong guns, is to be found in the *Antietam iron*, (used at the Columbian foundry,) from the works of Brien & McPherson, on the banks of the Potomac, about 70 miles above Georgetown. That iron has, happily combined, all the essential qualities for making the very best cannon, without the aid of any other admixture."

The Cumberland stone coal on the banks of the Potomac river is of the very best quality, as will be

seen by reference to Professor Ducatel's letter, No. 13, and Mr. Brien's, No. 12. The Cumberland coal can be had in unlimited abundance, and can be delivered in the District of Columbia, after the present year, when the Chesapeake and Ohio canal shall have reached the coal region on the Potomac, at ten or eleven cents per bushel.

Thus, every material that can be desired, and every facility of navigation and transportation, seem to indicate this situation as possessing superior advantages to any other in the Union; but especially, in the opinion of the committee, should a location within the District of Columbia be preferred, because a foundry thus situated would at all times be subject to the immediate supervision and inspection of the officers of the general government.

The committee will conclude this report by expressing their regret that the information which they desired could not be furnished at an earlier period of the session; and receiving it, as they did, on the eve of the adjournment of Congress, has not allowed them to bestow that full investigation which might otherwise have rendered a report more satisfactory. The object of the committee being to elicit information, they have called for it from the most intelligent and practical sources. All the information which they deem necessary to attain a correct conclusion has been transmitted, and which is appended, as furnished, to the end of this report.

All of which is respectfully submitted, together with the following resolution:

Resolved, That the Secretary of War ascertain upon what terms and at what price a proper site for the erection and establishment of a national foundry can be obtained within the District of Columbia, and that he report the same, together with the plan and estimates for a national foundry, to the next Congress.

No. 1.

WAR DEPARTMENT, *February 13, 1835.*

SIR: I have had the honor to receive your letter of the 6th instant, requiring certain information concerning the establishment of a cannon foundry by the government of the United States.

In answer, I beg leave to refer you to the accompanying report from the Ordnance department, which contains the information you ask for. My general views on the subject were so fully presented in my annual report to the President, in November, 1831, an extract from which accompanies the letter of the colonel of ordnance, that it does not appear to me necessary to add anything to what is there said.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. WILLIAM C. JOHNSON, *Chairman Committee, &c., House of Representatives.*

ORDNANCE OFFICE, *Washington, February 12, 1835.*

SIR: In reply to the interrogatories of the select committee of Congress appointed to inquire into the propriety of establishing a national foundry for the purpose of fabricating ordnance of various kinds suitable to the wants of the general government, referred to this department, I have the honor to state, in relation to the first inquiry, viz:

"Are there not several foundries owned by citizens of the United States which cast cannon and shot under contracts with the general government? How many, and what is the character of their metal, &c.? And are they competent, upon an emergency, to supply all the cannon and shot necessary for the navy and fortifications, and other defences completed and in progress of completion?"

That there are four foundries owned by citizens employed in casting cannon and shot for the fortifications of the United States: One in the State of New York, near West Point; one in Pittsburg, Pennsylvania; one in the District of Columbia, and one near Richmond, Virginia. The metal used at these foundries is supposed to be good, as the guns, when proved, undergo heavy charges, and but few of them burst of late years.

In relation to the competency of the foundries now employed to supply, on an emergency, all the cannon and shot necessary for the navy, fortifications, and other defences, it may be stated that, with their present means, four years would at least be required to cast the cannon, shot, and carriages necessary for the armament of the fortresses.

In answer to the second inquiry, viz:

"What amount of cannon and shot is, in your opinion, necessary for the navy and the several fortifications and other defences completed and in progress of completion over and above what is now possessed by the general government?"

It is to be remarked that the number of guns required for the armament of the fortresses completed and in progress of completion of the calibre of 24 and 32, is..... 6,632
And the number in possession of government, including the old patterns, which are of doubtful utility, is..... 2,633

Total number of guns now required.....	3,999
The number of shot required, at 250 per gun, is.....	1,658,000
And the number in possession of government is.....	137,746
Total number of shot now required.....	1,520,254

In answer to the third inquiry, viz:

"Whether, in your opinion, it is most expedient for the general government to establish a national foundry, or to depend upon private foundries?"

I have the honor to refer to an extract from your report to the President, November 21, 1831, as follows:

"The United States have no armories for the fabrication of cannon. The practice for some years has been to make contracts with the owners of four founderies, at Richmond, Georgetown, Pittsburg, and West Point, to the amount of the annual appropriation, allowing about an equal proportion to each, and pay such price as the Ordnance department, on the best information, judge reasonable.

"This procedure has been repeatedly stated in the annual reports to Congress, together with the reasons which led to it. These are founded in the capital and experience required to conduct this business; in the necessity of depending, in some degree, upon the integrity and character of the manufacturers, as there may be defects in the piece not easily discoverable, owing to the necessity of mixing together iron of different qualities; and in the belief that if a general competition for these supplies were excited, the existing establishments would be broken down, and others endeavor to take their places, which would either fail from similar causes, or furnish cannon unfit for service, and thus leave the government, at some critical period, without the means of procuring this indispensable arm of defence. The provisions of the act of Congress of March 3, 1809, seem, however, to present serious objections to this course, and I bring the subject before you at this time that it may be fully considered.

"It appears to me that a public armory for the fabrication of cannon is required by obvious considerations. By forming such an establishment the necessary experience and artisans would be provided, and such supplies of heavy ordnance manufactured as the government might direct. The actual value of the article would be ascertained, and contracts with individuals could be formed with a full knowledge of the circumstances. There would be no danger of combinations, nor would any injury result from fair competition. The supplies might be so controlled as to leave no fear of a deficiency in the quality or quantity of this essential arm of defence." And to state, in addition, that, considering the great number of guns, carriages, shot, and shells yet to be provided by foundries, a national foundry would undoubtedly be productive of great public advantage, not only to aid in furnishing the public supplies and in assuring the government, through the means of its own disinterested officers, that the material and workmanship are the best, but to afford, by this means, a known, unexceptional standard by which the work of the several contractors may be regulated in respect of the important points of metal, workmanship, and *price* charged. The two national armories for muskets answer admirably well this important point in reference to the contractors for manufacturing muskets for the United States.

Relative to the fourth and last inquiry, viz:

"In the event of the government determining to establish a national foundry, where would, in your opinion, be the most eligible situation?"

I have to state that, in the opinion of this department, the most eligible situation for a national foundry would be somewhere on tide-water, or on the Chesapeake and Ohio canal, either in the District of Columbia or Maryland, and near the seat of the general government, from whence there would be the greatest facilities afforded for transporting the guns, &c., to the several fortifications, and where an abundant supply of coal and iron ore of the best quality can at all times be procured, and at the cheapest rates.

I have the honor to be, sir, your obedient servant,

GEO. BOMFORD, *Colonel of Ordnance.*

No. 3.

Extract from the Report of the Secretary of War.

To the Ordnance department is committed the duty of providing and preserving the necessary armament for the land service of the United States. The trust is a responsible one, requiring fidelity in the administration, and practical as well as scientific knowledge in the execution. The expenditure for these objects exceeds \$900,000 annually, and the value of the accumulated property equals twelve and a half millions. But the nature of the service gives it a still deeper interest than the pecuniary considerations connected with it. Unless our arms are well fabricated and preserved, and in sufficient abundance, and unless we keep pace with the improvements which modern science and ingenuity are making, the consequences may hereafter prove disastrous. The necessary provision for these objects cannot be made without much time and experience; and that they may be ready for war, they must be procured in peace. A stable and efficient organization is, therefore, essential to the ordnance corps; and in the report of the officer at the head of it, will be found his views of its present condition. I recommend the subject to your favorable notice. The suggestions are the result of much experience, and present in a forcible manner the defects of the existing system and the meliorations that are required. I am satisfied that the adoption of the measures proposed would give renewed efficiency to the operations of this section of the public interest, and more economy in its expenditures.

A commission of experienced officers will be directed to investigate the subject, and to report their views concerning the various matters connected with it, and particularly with respect to the patterns and construction of the small arms and cannon, and any alterations which experience may have indicated. Their report, when received, will be laid before you.

I have made some examination into the condition of this branch of the national defence, with the view of ascertaining the supplies in service and in depot, and determining the quantity yet required to meet the demands of a prudent forecast. The result I shall submit for your consideration.

The United States have now in serviceable condition about 465,000 muskets. The annual demand to supply the necessary loss in the army and the militia and to furnish the issues to the respective States is 18,300. The number manufactured in the public armories is about 25,000, and at private works about 11,000, making a total of 36,000, at the average cost of \$12 each. We had at the commencement of the late war 240,000 muskets in depot, and during its progress 60,000 were made and purchased. At its termination there were but 20,000 at the various arsenals, and many of those in the hands of the troops were unserviceable. Eight years were then required to replace the number lost during the war.

From 1802 to 1814 there were 3,956,257 small arms, of all descriptions, procured for the French service.

And during the same period, for the British service, 3,142,366.

The average number of small arms annually fabricated in the French arsenals, from 1805 to 1814, was 219,372.

In the British arsenals, from 1802 to 1814, 261,947.	
The stock on hand in Great Britain in 1817, in depot, was.....	818,282
In the public service	200,974
Total	1,019,256

The number in depot in France in 1811 was 600,000, not including the great number in service.

These statements may be useful in determining the proper number of small arms which ought to be provided in this country. Being almost imperishable, when properly secured and preserved, their accumulation occasions no actual loss, as the time must, in all probability, come when they will be wanted.

Considering the nature of our service, requiring, as it does, an unusual expenditure of these articles, in consequence of the great proportion of militia we employ, and the system of rotation by which their services are regulated, and great losses consequently occasioned, and also the necessity of large deposits in different sections of such an extensive country, each of which should be adequate to any probable emergency, it is evident that our stock of small arms should at all times be large. Whether the quantity now on hand be sufficiently so is for Congress to determine.

There are now 623 cannon, of various calibre, for field service, and there are at the arsenals and in the old fortifications 1,165. But these cannon are all of antiquated patterns, and, with the exception of the six-pounders, amounting to 344, and a few of the heavier pieces, are considered unserviceable. There have been procured for the armament of the new fortifications 1,214 cannon of the improved pattern. The old fortifications will require (probably)

The new, already completed.....	646
Those contemplated by the board of engineers, a part of which are now constructing.....	2,587
Besides these, proper field trains deposited in different sections of the Union, and sufficiently large to meet probable contingencies, may be estimated at.....	4,045
	850

The average cost of our cannon is \$5 94 per hundred pounds, which gives the following prices for those of different calibres:

For 42-pounders.....	\$520
For 32-pounders.....	450
For 24-pounders.....	330
For 18-pounders.....	245
For 12-pounders.....	150
For 6-pounders.....	70

It is estimated that an iron cannon will not safely bear more than one thousand two hundred discharges with the service charge, after which it should be broken up.

The United States have no armories for the fabrication of cannon. The practice for some years has been to make contracts with the owners of the four foundries at Richmond, Georgetown, Pittsburg, and West Point, to the amount of the annual appropriation, allowing about an equal proportion to each, and paying such price as the Ordnance department, on the best information, judge reasonable.

This procedure has been repeatedly stated in the annual reports to Congress, together with the reasons which led to it. These are founded in the capital and experience required to conduct this business; in the necessity of depending, in some degree, upon the integrity and character of the manufacturers, as there may be defects in the piece not easily discoverable, owing to the necessity of mixing together iron of different qualities; and in the belief that if a general competition for these supplies were excited, the existing establishments would be broken down and others endeavor to take their places, which would either fail from similar causes or furnish cannon unfit for service, and thus leave the government, at some critical period, without the means of procuring this indispensable arm of defence. The provisions of the acts of Congress of March 3, 1809, seem, however, to present serious objections to this course, and I bring the subject before you at this time that it may be fully considered.

It appears to me that a public armory for the fabrication of cannon is required by obvious considerations. By forming such an establishment the necessary experience and artisans would be provided, and such supplies of heavy ordnance manufactured as the government might direct. The actual value of the article would be ascertained, and contracts with individuals could be formed, with a full knowledge of the circumstances. There would be no danger of combinations, nor would any injury result from fair competition. The supplies might be so controlled as to leave no fear of a deficiency in the quality or quantity of this essential arm of defence.

No. 4.

NAVY DEPARTMENT, February 21, 1835.

SIR: I have the honor to acknowledge the receipt of your letter of the 7th instant upon the subject of a national foundry; and, in compliance with your request, send herewith a copy of Captain Catesby Jones's report to the navy commissioners, as inspector of ordnance, dated the 20th of January, 1834.

The letter of the navy commissioners of the 18th instant, which accompanied the copy, is also enclosed. The committee also ask my opinion as to the expediency of establishing a national foundry for the purpose of fabricating ordnance for the use of the government.

I have not the information necessary to enable me to present a satisfactory view of the advantages of such an establishment, but this information will be obtained as soon as may be, to be offered hereafter, should it be called for.

In the meantime I may venture to say that we shall never arrive at any great perfection in the fabrication of ordnance without a national foundry. This perfection can only be attained by a long series of experiments, by men of skill and science, in the various materials which our country affords for the fabrication of cannon, and of the best means of casting and boring them. These experiments never will

be made under a contract system, and can only be expected from an establishment under the immediate control of the government.

Of the importance and expediency of such an establishment, therefore, I can entertain no doubt.

I am, very respectfully, your obedient servant,

M. DICKERSON.

Hon. WILLIAM C. JOHNSON, *Chairman Foundry Committee, House of Representatives.*

No. 5.

NEAR PROSPECT HILL, *Fairfax County, Virginia, January 7, 1835.*

Answers to four interrogatories propounded by the select committee of the House of Representatives appointed to inquire into the expediency of establishing a national foundry, &c.

Answer to the first interrogatory.—There are at this time, I believe, five private foundries casting cannon or shot under contract with the general government, viz: Columbian foundry, near Georgetown, D. C.; Bellona foundry, on the James river, 12 miles above Richmond, Virginia; the West Point foundry, New York, on the North or Hudson river, opposite to West Point; — foundry, at or near Pittsburg, Pennsylvania, and Alger's foundry, Boston, Massachusetts. The metal (*iron*) used at the above-named foundries can scarcely be from the same or similar ore, nor is it probable that the guns cast at the different works are of like quality, and to be equally depended on, although all are subjected to the same severe proof before they are received, either for the army or the navy. It does not often happen that iron produced from any one ore possesses all the qualities requisite for *gun* metal: one will be a little too hard, another too soft, one a close, compact, brittle grain, and another open, or porous and weak, &c. Hence the necessity, as a general rule, of mixing or combining two or more kinds of iron, to produce what the founders term *gun metal*; and hence arises one of the great difficulties and uncertainties attending *all first efforts* at cannon casting. An exception, however, to this general rule, as regards the necessity of mixing different kinds of iron to make strong guns, is to be found in the *Antietam iron*, (used at the Columbian foundry,) from the works of Brien & McPherson, on the banks of the Potomac, about 70 miles above Georgetown; that iron has happily combined all the essential qualities for making the *very best cannon without the aid of any other admixture*. Some years ago I believe General Mason cast at the Columbian foundry some field-pieces for the Ordnance department, (by way of experiment, to test the utmost strength of the *Antietam* metal,) which were little or no heavier than the best brass or bronze guns of the same calibre would have been. The guns stood the severest proof test without bursting; nevertheless, they were not safe guns to be used in service; but the experiment proved beyond doubt what was before believed by those only who were well acquainted with the character of that metal, viz: its superiority over every other known iron used for casting cannon, except, indeed, the metal used by Major Clark at the Bellona foundry, which is believed to be the same same vein passing in a southwesterly direction from the Potomac to the James river. Of the metal used at the other foundries I have less knowledge. Soon after the West Point foundry commenced operations, the highly intelligent managers of that institution made many and various experiments upon most of the metals produced in this country, as well as upon various foreign iron, and I think the result of their experiments proved the North river, New York, iron next in quality to the James river and Potomac metal, for making guns; and for the same purpose, Mr. Alger, of the Boston foundry, gives a decided preference to the Virginia, *i. e.*, the James river and Potomac metal, over any other yet discovered. Of the Pittsburg foundry, or the metal used thereat, I have no knowledge whatever; of course, I can say nothing concerning them.

The character of the works above enumerated differs materially. The Columbian and Bellona foundries are nearly on a par as respects magnitude, and their operations are pretty much confined to government work, viz: casting cannon and shot. The West Point foundry is, I believe, the most extensive work of the kind in the United States, and carries on, upon a large scale, almost every variety of casting in iron excepting hollow ware. Its present capacity for cannon making, however, does not much exceed that of the two last above-mentioned foundries. The Boston foundry, owned by Mr. Alger, has not, I believe, cast *any* guns for the navy, nor am I certain that he has for the army; but for shot he had a considerable contract with the Ordnance department in 1833, and his specimens were the best I have ever seen; and from the extensive plan, perfect machinery, and experienced workmen connected with that work, I should place great confidence in the productions of that foundry.

All the cannon and shot required under the law for the gradual increase of the navy were cast at the Columbian, Bellona, and West Point foundries. The quality of the castings at these three works does not materially differ; perhaps, upon the whole, the guns are smoother and may be better from the Columbian foundry than from either of the other two; but the shot turned out from the West Point foundry are decidedly superior in every respect to those cast at the Bellona and the Columbian foundries.

The answer to the last clause of the first interrogatory must be somewhat hypothetical, as I have no correct idea of the number or nature of the guns required for all the purposes enumerated in that interrogatory; but I conceive that, under the most favorable circumstances, in a state of profound peace, with an uninterrupted coast trade, and every other facility at command for procuring and transporting all the necessary materials to the several private foundries now in the employment of government, or which could be safely or successfully brought into its employment, sooner than an extensive public foundry might be erected and put in operation, from *six to eight hundred heavy cannon* would be the greatest number that could be obtained by private contract in any one year. This estimate is based upon the supposition that each of the five enumerated foundries would be enabled to turn out, on an average, *four heavy cannon* per week during the year, and this, I am sure, is a *full* allowance, when it is remembered that to bore a 24, 32, or 42-pounder requires five or six days under the most favorable circumstances, and that a single furnace cannot cast more than one gun of the above denomination in two days; that intense cold weather is unfavorable for heavy casting, and that, in the long droughts so common of late years in our climate, the boring mills of the Columbian, Bellona, and of the West Point foundries (driven by water power) are frequently inactive for want of water, and are unable to bore even a single set of guns in a month or six weeks; hence may be inferred the total inability of private foundries, under less

favorable circumstances, to supply even the current demand for *cannon, shot, &c., &c.*, for the navy, army, and other defences contemplated by the general government; and that so long as government does depend *solely* upon private contracts for the supply of cannon, shot, &c., so long will she be subjected to great disappointments and most fatal consequences, for no private citizen, however patriotic, wealthy, or public spirited he may be, will hazard a capital to fabricate cannon upon a scale sufficiently large to meet *all* the wants of the government, well knowing, as he must know, that however well he may have prepared himself, or even performed *well* all the stipulations of *one or more contracts*, some *novice* in the art may *underbid* him a few dollars, or even cents, and deprive him of the next contract; the *law* requiring all contracts to be given to the lowest bidder, after due notice by public advertisement.

Answer to the second interrogatory.—I have no correct data at hand upon which to base even a conjecture that would in any degree approximate the truth as to the amount or number of cannon and shot required for all the military purposes of the general government, but of naval ordnance, so far as regards *number*, NUMERICALLY, there are more cannon on hand than are absolutely required for arming *all* the ships of the navy *built*, or in the *progress of building*; but a large proportion of those guns are, from various causes, totally unfit for the navy, and never can be used on board our ships-of-war with safety and efficiency. Of this description there are *several hundred* which ought to be demolished, and the deficiency occasioned thereby ought to be *immediately* made up with new guns of suitable calibre, and of patterns better adapted to our new-modelled ships. For a more particular description of the ordnance of the navy, I refer you to my report, made to the board of navy commissioners, dated January 20, 1834.

In answering the third interrogatory, I state unequivocally my opinion, long entertained, that the best results and most beneficial effects would be secured to the nation in the *improvements and certain* fabrication of ordnance by the establishment of a public foundry; and, for so saying, I refer to the views expressed in my answer to interrogatory *first* of this series, and to the appended paper marked A; and, in addition thereto, will only add that the bare possibility that a wily enemy, by the expenditure of a sum of money too paltry to be named in comparison with the object to be gained, might, through secret agents, *destroy* or obtain entire control by *purchase* over any private foundry in the employment of government, and that, too, at a time when their operations might be of vital importance to some great military operations, is of itself all-sufficient to elicit the prompt and serious attention of Congress to this all-important subject.

It has sometimes happened, too, that private contractors have found their engagements with the government rather an incumbrance to them; for, at one period of the revolutions in South America, so great was the demand for cannon for those States (which paid better prices) that perhaps to the patriotism alone of the owners of the private foundries then in the employ of the government may be attributed the *faithful performance* of their engagements; but it is as unwise as it is unreasonable to suppose that individuals will *always* seek after government contracts when they can find *better customers*.

Answer to fourth and last interrogatory, viz: "In the event of the government determining to establish a national foundry, where would, in your opinion, be the most eligible situations? State your reasons fully for your preference."

I unhesitatingly say at or near the seat of government. Because there is the residency of the chiefs of the Ordnance and Engineer departments, and of the board of navy commissioners, who have the entire control and supervision of all ordnance and ordnance stores required for the public defences of every description; and as some of the great benefits to be derived from the establishment of a national foundry are increased and progressive perfection in the arm manufactured, a better acquaintance with the character and quality of the different metals produced in our country, and the just proportions to be used of each when combination shall be *necessary or desirable*, a knowledge of which can only be attained by actual and varied experiments, attended with too much uncertainty and expense to be undertaken by private founders, surely, then, no other place could be so entirely fit for a national foundry whereto to make experiments as one which may be found within an hour's walk of the public offices in Washington. But, independent of these most cogent reasons, there is a site within the District of Columbia combining more *positive* advantages for a cannon foundry on a large scale than any other, perhaps, to be found on the navigable or tide waters of the United States. I allude to that extensive flat or low ground next *above* the locks of the old Potomac canal, lying between the Chesapeake and Ohio canal and Payne's fishing landing, at the head of *river* navigation, and terminating above by the causeway leading to the chain or suspension bridge connecting with the Virginia shore, just below the Little Falls of the Potomac. Here water power may be had at *all times, to any extent, even without limitation*. By the Chesapeake and Ohio canal, the best *ore* or pig iron for cannon can be delivered from the canal boat almost into the very furnace itself; and the coal banks of Cumberland, by the same medium of easy and cheap transportation, can supply the very best bituminous coal at least *fifty* per cent. *cheaper* than it can be delivered anywhere else on the Atlantic board. Materials of the most durable nature for constructing the necessary buildings are in abundance on the spot, or may be transported there with as little expense as they can be carried to any other given point. The facilities, too, for distributing ordnance which may be finished here for the various forts, arsenals, and navy yards, &c., are in nowise inferior to those afforded for the collection of the raw material; for, in fact, independent of the continuation of the canal through Georgetown to Alexandria and Washington, (at which latter place it connects with the Baltimore railroad,) it is not impossible so to locate an extensive foundry and boring mills at the point I have designated as to be taking in iron and coal from a boat on the canal at one door, whilst any ship that can pass the bar below Georgetown might be receiving the finished guns within less than a cable's length of the other. Here, too, is a space sufficient for a commodious proving ground, uninterrupted by any public highway or common resort—an advantage which none of the private foundries with which I am acquainted now possess, or can obtain at any reasonable price, though all know and feel the many vexatious delays and inconveniences to which they are often subjected for want of sufficient space to prove in, without encroaching on the rights of others, or sometimes hazarding the lives of their neighbors or waygoing travellers.

THOMAS AP CATESBY JONES, *Captain U. S. Navy.*

HON. WILLIAM C. JOHNSON, *Chairman of the Select Committee, &c., House of Representatives.*

A.

NEAR PROSPECT HILL, *Fairfax County, Virginia, January 7, 1835.*

I have had the honor to receive your letter of the 4th instant, asking my views in relation to the utility and expediency of establishing a national foundry for the fabrication of ordnance to supply the wants of the general government. As to the utility of such a work, I think no one who has bestowed the least thought upon the subject can entertain the smallest doubt; nor is the expediency at this time at all more questionable in my opinion.

It has always been a matter of great surprise to me that the subject of a national foundry has not been more fully looked into by those whose peculiar province it is provide for the *defences* of the country. Millions upon millions have been expended within the last twenty years in building ships-of-war, creating and improving navy yards, and in erecting the most extensive and magnificent fortifications at various points on our maritime frontier, and hundreds of thousands are annually appropriated by Congress for the support of several national armories for the manufacture of *small arms*; but the means of supplying the government with *cannon* for her forts and navy have been entirely neglected, and we are this day altogether dependent upon the private resources of a few individuals for a *limited* and *precarious* supply of heavy ordnance to arm the fortifications already built or under construction—a source from which it would hardly be possible to obtain heavy cannon enough for the works above mentioned *in seven years* *where the whole national treasury at the disposal of the Ordnance department.* To account for such snipeness upon this important subject is difficult, unless, indeed, it is to be attributed to a very common though not less dangerous *error, that of supposing that any common foundry may at will be converted into a cannon foundry.* Nothing, I say, can be more *fallacious* than such an idea, and it may be as fatal as false; for the government, reposing with confidence upon such means for arming her defences, would, in the event of sudden war with any superior naval power, find herself deficient, *greatly deficient*, in heavy ordnance, *and without the means within her control to supply the deficiency.*

The fabrication of heavy ordnance is a branch of manufacture less understood, (*practically,*) perhaps, than almost any other to which the American artisans have turned their attention; and so uncertain is the result, that the most experienced practical founders, when removed from the furnaces they have been accustomed to work at (with perfect success) to other furnaces, and especially if they be new, often find it most difficult, even with the same materials, to make a gun which *will stand proof*, or that can be depended on for service. Of this fact I doubt not the War Department has some proofs on its records; for, if I mistake not, about the close of the late war with England, the government made considerable advances to a newly set up *cannon founder*, near *Newburg*, New York. The result was a total *failure*; the work was discontinued, and the government was obliged to take the stock on hand (consisting chiefly of the *machinery*) instead of *cannon*, upon a contract on which she had made a large *advance in money.* About the same period the West Point Foundry Association went into operation on the North river, nearly opposite to West Point. This institution was established under more favorable auspices than any other establishment of the kind in the United States; its capital was ample; among its stockholders were to be found men of science, talents, wealth, and political influence; and their avowed object was to *establish a cannon foundry to supply ordnance for the army and navy.* And what was the result of their *early labors in the art of cannon making? Anything but successful*; for, although the best workshops of Europe were resorted to and visited by one of the firm, who returned to this country with some of the most experienced cannon founders from Carron and other works in England, bringing with them English iron and coal, such as they had been accustomed to work, still tolerable success did not attend their labors. Ores and coal from almost every mine in the United States were tried with no better results. Even the identical iron and coal taken from the Columbian foundry near Georgetown, District of Columbia, with which General Mason was then manufacturing heavy ordnance for the navy, (of which he did not lose above one per cent. in proving,) could not be cast into cannon of the same description at West Point without a loss of from fifteen to twenty-five per cent. Like results ensued from experiments made at the West Point foundry with the *James river iron*, used with so much success by Major Clark, proprietor of Bellona foundry. In short, disappointment, severe losses, and personal mortification were all that the conductors of the West Point Foundry Association received for several years in return for their *heavy outlay of money* and great *personal exertions* in endeavoring to bring their works to a state of *perfection, in which they have ultimately succeeded, but not until they had expended a capital in unsuccessful experiments which few private companies or individuals in the United States could sustain.*

The difficulties encountered by the Newburg and West Point foundries, I am inclined to think, are only such as *every new work* of the kind would be more or less liable to in the beginning, *but would be much sooner overcome in a public than in any private work*, for the government would not only have it in its power to make more satisfactory and *extensive experiments* in the onset, but would be enabled at all times to draw to its works the most experienced artisans that the country affords, and after a few years would in its turn be enabled to send out experienced workmen enough to supply private foundries throughout the country.

The arguments in favor of a national foundry are multifarious, and might be almost indefinitely extended were it necessary, among which is the great advantage the government would inevitably derive from having an establishment of its own, where all *models* and *patterns* for castings would be made; the *quality of all metals* and *combinations* of metals could be *ascertained* and *settled* at the government works, under the eye and superintendence of its best officers, and, by a proper analysis of the various metals used in gun-making, she would always be enabled to have her guns cast, *even at private foundries, of the best metals, and thereby lessen the dreadful consequences of a gun bursting in battle.* The state of perfection, too, to which castings could be soon brought in a *national foundry* would oblige all *private founders* to follow the *example of improvements* made at the public works, or else lose the *government patronage* altogether.

If, sir, I have omitted an expression of opinion upon any point in your inquiry, or if the views I have endeavored to communicate are not sufficiently comprehensible, I will with pleasure answer any further calls that you may feel disposed to make on me.

I am, sir, with great respect, your obedient servant,

THOMAS AP CATESBY JONES, *Captain, and late Inspector of Ordnance, U. S. N.*

HOB. WILLIAM C. JOHNSON, &c., &c., &c.

No. 6.

HEADQUARTERS OF THE ARMY, *Washington, February 23, 1835.*

SIR: It was only last night that I had the honor of receiving your letter of the 18th instant, wishing to have my views on the propriety of establishing a national foundry, a subject with which the committee of which you are chairman is charged.

After duly considering the subject, it is my opinion that it is highly important that government should possess such an establishment. Besides the advantage it would afford of supplying itself with all kinds of castings for military, naval, and civil purposes of the best kind, it would afford the means of making such experiments under its own direction as circumstances might render it proper to make in the course of our experience in such matters; and if such an establishment could not meet the demands for all the castings that might be required for the public service, it would at least be able to furnish the patterns approved by government, and to determine the quality of the metal to be employed in the manufacture of any work or castings required for its uses which circumstances might require to be executed elsewhere. Ordinarily there would be sufficient employment for one foundry in casting the various pieces of ordnance and the projectiles required for them; and, further, I would beg leave to add that it is of great consequence to the nation that the art of manufacturing them should be preserved in the country.

I have the honor to be, sir, very respectfully, your obedient servant,

ALEXANDER MACOMB, *Major General.*

HON. WILLIAM COST JOHNSON.

No. 7.

WASHINGTON, *February 12, 1835.*

SIR: Your note of the 6th instant having been accidentally mislaid must be my apology for not having earlier complied with its request.

You ask my attention to this interrogatory: "Is it most expedient for the general government to establish a national foundry or to depend on private foundries?"

In obtaining ordnance for national purposes the objects are: 1st, perfection of model; 2d, excellence of metal; 3d, perfection in mechanical execution; 4th, certainty of supply; 5th, cheapness.

Whether the work be executed at a public or private foundry, the government prescribes the model and specifies the metal. At a public foundry these objects may be secured by the constant *superintendence* of scientific and practical officers or agents of the government, and by subsequent inspection and proofs made by another set of officers or agents. At private foundries the same objects are secured by *the terms of the contract*, in which it is stipulated that the ordnance shall be rigorously inspected and proved before received or paid for. At either establishment mechanical execution is or may be secured in like manner; and if in contracts the right of constant superintendence on the part of officers or agents of the government were stipulated for, then the security in favor of having good work done at private foundries would be as great as in the other mode of supply.

Certainty of supply.—There are in the country already four private foundries engaged in supplying the government with cannon, howitzers, mortars, shot, and shells for the use of the militia, the navy, and the army. Considering the capital, skill, and enterprise of our people, all stimulated by the desire of gain, it cannot be doubted that, in case of demand, new establishments of the same kind would be immediately created. It is believed, however, that those now in existence are capable, by a slight extension, of supplying promptly the wants of the government under almost any circumstances. I think, therefore, that the principle of gain may be safely relied upon for a certain and prompt supply of any amount of ordnance the country may want in any reasonable time, and a public foundry, if in actual existence, would be able to do no more.

Cheapness.—This object, though important, is inferior to either of those already discussed.

I am unacquainted with the details of the recent contracts with the foundries, and know not what measures are taken to excite competition in the bids for the work of the government. I should think, however, that, by care, the work might be contracted for at prices which would give a fair compensation to the proprietors of the foundries, and at the same time at a cost much less than that which would necessarily be incurred if the government were to undertake to supply itself with the same articles by direct means.

All of which I have the honor respectfully to submit.

WINFIELD SCOTT.

HON. WM. COST JOHNSON, *Chairman of Select Committee, House of Representatives.*

No. 8.

WASHINGTON, *February 14, 1835.*

SIR: I have the honor to acknowledge the receipt of your circular of the 6th instant, and I regret that it is not in my power to go into the detail required by the resolution and the annexed interrogatories. Since I left the service, I have not kept myself informed of all the places of manufacture, or the amount of ordnance supplied annually for the public service. I believe, however, that the government still depend wholly on contracts with private individuals and companies for cannon, shot, shells, &c., as well for fortifications and the army as for all public vessels and navy service.

I will not take up your time with a discussion of the advantages of public establishments for all national supplies; all know the advantage of public armories and navy yards. I consider national foundries equally desirable and necessary, and will briefly consider the question of location, which involves several considerations. The most important, in my opinion, are, the quality of the ore, the means of obtaining

and transporting it, with the necessary fuel, to a point where proper water power and other facilities for manufacture can be found advantageously united in the vicinity of water transportation of heavy ordnance, &c., to navy yards and seaboard fortifications, and the expedition and economy with which all can be accomplished. There is no position, in my opinion, combining so many, in fact all these advantages, as well as others of great national and political consideration, as the lands binding on the Chesapeake and Ohio canal, in the District of Columbia, in the vicinity of the Little Falls, immediately below the road leading from the canal to the *chain bridge* of the Potomac. There all the water of the canal not required for navigation is controlled, and will always be sufficient for this and other manufacturing purposes the government may require. In this vicinity a private foundry has been patronized by the government, on account of the superiority of the ore, more than twenty-five years, and the late war has so fully tested the ordnance of that factory as to leave nothing to chance in relation to the ore, so abundant and easy of access.

A proper national foundry on the canal, as above described, might supply all future demands, under the immediate eye of the Executive and Congress.

I have the honor to be, very respectfully, your most obedient servant,

D. PARKER.

WM. COST JOHNSON, Esq., *Chairman of Select Committee, House of Representatives.*

No. 9.

RESOLUTIONS OF THE LEGISLATURE OF MARYLAND.

BY THE SENATE, *March 5, 1832.*

Whereas it is the admonition of the Father of his Country "that we should in peace prepare for war," remembering that timely disbursements to "prepare for danger frequently prevent much greater disbursements to repel it;" and whereas, in his message to Congress, he declared it advisable to provide and lay up materials of war in proportion as our resources should render it practicable, without inconvenience, so that in future wars we might not be found destitute of every necessary means of defence; and, in pursuance of these views, he recommended the establishment of national works for manufacturing such articles as were necessary for the defence of the country; and whereas the experience of the late war fully demonstrated the wisdom of that policy which his solicitude for our welfare recommended, and the loss of blood and treasure which this republic suffered has proved the value of these precepts; and whereas it belongs to the general government, under the Constitution of the Union, "to provide for the common defence, and to promote the general welfare:" Therefore—

Resolved by the general assembly of Maryland, That a knowledge of the topography of the country is of essential importance, as well for the promotion of works of internal improvement as to give effect to military operations; and that this knowledge should be gathered by repeated surveys, and proper maps and charts deposited in our archives; and as the acquisition of such information (alike useful in peace and war) can only be made by those who, devoting their talents and energies to the duty, become skilled in scientific principles, and accurate in practical details, the topographical corps of the United States should be fostered and gradually increased.

Resolved, That the Ordnance department is of peculiar importance, requiring fidelity, and practical skill, and scientific knowledge in its administration. Its efficient organization is therefore demanded, as well to insure the fabrication and preservation of our arms in sufficient abundance as to render the ingenuity and science of those to whom these duties are intrusted available and beneficial to the country.

Resolved, That the establishment of fortifications throughout our borders should be persevered in as essential to the security of the important outlets of our commerce, and at the same time to give additional maritime strength to the Atlantic States.

Resolved, That the establishment of a national foundry for the fabrication of cannon is required as well to provide for the armament of our fortifications as to furnish proper field trains, to be distributed throughout the different States, and that, by such an establishment, not only would artisans be drawn together, but the true principles of economy be preserved by the government, commanding at all times the means of supplying the most important arm of defence, in quantity and quality, as the emergency may demand.

Resolved, That our senators be instructed, and our representatives in Congress be requested, to advocate the views and measures recommended in the foregoing resolutions.

Resolved, That the governor be requested to transmit a copy of the above resolutions to each of our said senators and representatives.

By order:

JOS. H. NICHOLSON, *Clerk.*

BY THE HOUSE OF DELEGATES, *March 6, 1832.*

Read the second time, by special order, and unanimously assented to.

By order:

G. G. BREWER, *Clerk.*

No. 10.

WASHINGTON, *February 11, 1835.*

SIR: I have the honor to acknowledge the receipt of your letter of — instant, requesting my opinion of the propriety of establishing a national foundry for making ordnance for the government, and my reasons for such opinion.

In reply I beg leave to offer as my opinion, that a national foundry for making ordnance would be desirable, and conducive to the public interests; but that it would not be expedient to establish one upon a large scale until its advantages should be tested by experiment.

The advantages which might, in my opinion, be reasonably anticipated from such an establishment are: the ascertainment of the actual cost of the manufacture of ordnance, and the proper price which ought to be paid for such as might be obtained from contractors; the acquirement of valuable information respecting the different qualities of iron, and of their proper combination and treatment to make the best

ordnance; the power of determining, by our own officers, what degree of accuracy in the dimensions of the different guns and projectiles, and what tests of their strength and tenacity we may, with propriety, require from contractors, to secure from them the manufacture of ordnance of the best metal and most accurate dimensions.

A belief that these objects may be secured by a national foundry, and that such an establishment would also afford the best means for making ordnance of new patterns, when they might be required for experiments, form the principal reasons which I have to offer in support of my opinion.

I have the honor to be, very respectfully, sir, your most obedient servant,

C. MORRIS.

Hon. WM. COST JOHNSON, *Chairman of a Committee of the House of Representatives, &c.*

No. 11.

NAVY DEPARTMENT, *February 24, 1835.*

SIR: I have the honor to acknowledge the receipt of your letter of yesterday, requesting a copy of the tabular statements connected with Captain Catesby Jones's report upon navy ordnance.

Your letter has been forwarded to the commissioners of the navy, for a copy to be made as early as practicable.

Their former letter stated that it would occupy about a month to prepare it.

I am, very respectfully, sir, your obedient servant,

M. DICKERSON.

Hon. WM. COST JOHNSON, *Chairman, &c., House of Representatives.*

No. 12.

ANTIETAM IRON-WORKS, *February, 1835.*

DEAR SIR: My father's heirs and myself are equally interested in these works, to which is attached a very large tract of land, which gives us many advantages over other establishments of this kind in the United States, there being two *inexhaustible* ore banks; also an abundant supply of wood upon the property, and *the water power is second to none*. The ores from these banks are *peculiarly* well calculated for the fabrication of cannon. The pig iron made from these ores has for many years been used at General John Mason's foundry for this purpose; and I think I can say with safety that there has been more of this iron used for the making of cannon than has been from any *one* establishment in the United States. This place supplied General Mason's foundry with iron some years previous to his being proprietor of it. We have not, however, sold any for the last two years to Mason, on account of the small quantity made. The extensive improvements we have made prevented our operating fully, as we are *now* able to do; besides, our rolling mill, which is a *very spacious* one, manufactured a large quantity into bar iron. The iron does not require to be mixed with any other; it has in itself *all* the requisite qualities. We can furnish a national foundry with 1,500 tons of pig iron per annum; and if the government would give us a standing order for the quantity of iron used at such a foundry we would build another furnace and double the above amount of pig iron, provided we could not supply their wants with one furnace. The canal which passes through our property from nine to ten miles, and which is very contiguous to our works, would of course afford us great facilities for transportation of our iron, as well as procuring our stone coal from Cumberland. We calculate upon purchasing this article (stone coal) for one-half the price we are now giving, after this great work (the canal) is completed to the coal mines. I have this spring purchased for two cents per bushel less than I did last year, or any year previous. This can be certainly attributed to nothing save the operation of this canal from Williamsport only. We have made a fair experiment of this coal with the Richmond, and find this to be a much superior article. *One* bushel of Cumberland coal is worth *two* of Richmond, or any other we have used. The experience I have had, and the frequent trials I have given this article, convince me, and all my workmen, that the Westernport coal (which is generally called *Cumberland coal*) is the strongest bituminous coal in the United States yet discovered; and there are mountains of it, and so convenient to the river that it does not cost one cent per bushel to put it into the boats; many say half a cent will deposit it in the boats ready for market. It is therefore easy to calculate what the expense will be to bring it by the canal to this place, after ascertaining the distance, which I am not really able to name. It is, I think, called seventy-two or three miles from this to Georgetown; this, deducted from the whole distance of the line, will prove the number of miles from here to Cumberland by the canal. As regards the *propriety* of establishing a national foundry in the District of Columbia, and the apprehension that iron suitable for the fabrication of cannon cannot be procured, let the committee inquire and collect the true facts, and they will find that a great portion of the cannon now in use was made from this iron; and I will unhesitatingly say that *we* can supply the government with as much iron as she may require for cannon at this contemplated foundry, and none shall be sent but of the very best quality. Look at the immense sums of money Mason has paid us ever since *he* has had the making of cannon for government; and I assure you it was a rare thing to have a complaint from him about the quality of the iron; in fact, I recollect of none. I should be very glad to see you here, when I could, perhaps, more fully explain to you. If there is any further-statement necessary you will please let me know.

Yours, very truly,

JNO. MCP. BRIEN.

Hon. WM. COST JOHNSON, *Jefferson, Frederick County, Maryland.*

No. 13.

BALTIMORE, 1835.

DEAR SIR: I seize the earliest available opportunity to reply to your inquiries concerning the "quality of the coal and iron ores on the banks of the Potomac," &c.

In the report on the projected survey of the State of Maryland, made at the December session, 1833, of our assembly, and to which I beg leave to refer you for further details, (B.) I have stated that the coal, occurring in such immense deposits in Allegany county, should be ranked among the best kinds of this

very useful combustible, because it is found to burn easily, and that in burning it swells and agglutinates, or *cakes*, as it is termed—properties that render it eminently serviceable in all metallurgic operations. This variety of coal is known to mineralogists by the name of *slaty coal*, and is, emphatically, all things considered, the best kind of coal; its analysis is given at page 31 of the report.

As to the quality of iron ores on the Potomac, you will find it stated in the same report that a great abundance of one kind occurs along the whole length of the eastern slope of the Cotocin range of mountains, terminating in Maryland, at the Point of Rocks. This variety of iron ore, known to mineralogists by the name of *hematitic brown oxide of iron*, is much mixed with *phosphate of iron*; hence the metal which it yields is very brittle. Beyond this, at the issue of Pleasant Valley, on the Potomac, there is another extensive deposit, in which the ore, analogous in composition to that described as occurring on the eastern slope of the Cotocin, is, however, free from phosphate of iron. This ore, then, will yield metal of a much better quality, and well adapted to the making of bar iron. Such is the nature of the ore worked at the Antietam furnace. The same ore again occurs in the northern portions of the west slope of the south mountains. Other deposits, no doubt, exist on the Virginia as well as Maryland shore of the river; but I have had no opportunity of examining them.

That the varieties of iron ore designated above will be found to yield a good metal for the casting of ordnance, I confess I am not prepared to say. But if we will not confine ourselves to the banks of the Potomac, there may be indicated as occurring in the vicinity of New London, Frederick county, that variety of iron ore called *specular oxide of iron*, which is known to afford a metal peculiarly well adapted to castings. The same variety has been found in Baltimore and Harford counties; and without going so far, there is known to be abundantly diffused throughout a large belt of country between Baltimore city and the District those varieties described in systematic works as *carbonate of iron* and *brown oxide of iron*, acknowledged to be among the best ores of this metal. The Washington railroad traverses this belt nearly in its whole length.

It may be safely asserted, therefore, that, from the great variety and great abundance of iron ores occurring in Maryland, no deficiency in quantity nor in quality of the metal can be apprehended from this quarter; and the bright prospect which has lately dawned upon us of a speedy completion of the Chesapeake and Ohio canal, at least as far as Cumberland, furnishes us a sure promise of soon possessing the most ample and efficient means of putting all these resources to the best advantage for private wealth as well as national strength.

In the hope that the information now given, imperfect as it is, may be of some service, I transmit it without delay, together with the assurance of the great regard and esteem of, dear sir, very respectfully,
yours, &c.,

J. T. DUCATEL.

Hon. W. COST JOHNSON, *Washington City.*

B.

Extract from a report to the legislature, made in 1833, on a geological and topographical survey of the State of Maryland, by Julius T. Ducatel, M. D., professor of chemistry, University of Maryland, and John H. Alexander, esq., topographical engineer; made by order of the general assembly of Maryland.

"The fifth and last geological division which it is deemed expedient to make comprehends the remaining portion of Allegany county, westward of Wills's creek. Some general remarks concerning this very interesting part of the State, comprising its deposits of *bituminous coal* and the *iron ores* frequently associated with them, will conclude what the undersigned have to report on the geology of Maryland.

"The carboniferous group of rocks forming the most prominent geological feature of Allegany county consists principally of beds of *sandstone, slate, shale, and coal*, irregularly interstratified; besides which, it embraces formations of *red sandstone, whinstone, and carboniferous limestone*, and, what is of more importance, considerable deposits of *iron ore*.

"In reference to the agricultural resources of the coal districts, which may be described as hilly, it is found that the soil upon them, being a mixture of decomposed slate and limestone with sand, is in general very fertile, and yields abundant crops of grain—principally *oats*—of a very superior quality. Within a few years the cultivation of the tobacco plant has been commenced, and in the newly-cleared lands is produced the bright leaf staple, which always commands a high price.

"The more mountainous districts above the level of the coal formation present broad valleys bearing every evidence of having formerly been the beds of extensive lakes now dried up or drained, the waters of which have left behind them deep deposits of clayey loam. These beautiful tracts of country have received the name of *glades*. From their elevated position and their constant moist condition, they form very productive meadows and the most luxuriant pastures. The mineral resources of the coal districts it would be folly to attempt to estimate. That district alone, of which Frostburg may be assumed to be the centre, is represented as 'bounded by the Savage mountain on the west, extending from the west branch of Wills's creek to the Savage river, and by the same mountain continued southwest to the head branch of the Potomac; and on the east by the Little Allegany, Piney mountain, Dan's mountain, and the same mountain continued into Virginia, to the upper branches of the Potomac. The space between the two ranges of mountains is from five to seven miles, and sixty miles long, making a surface of near four hundred square miles, over a great part of which coal is known to abound.'

"The thickness of these beds of coal varies from three feet to *fifteen feet*. The following account of three coal deposits, two at Westernport and one on the Potomac a little above the mouth of Savage, will exhibit the more striking appearances of these coal strata—preference having been given to these localities over those near Frostburg because it is believed they have not been elsewhere described:

"The first deposit, at Westernport, known by the name of *Murphy's bed*, is situated on the eastern side of George's creek and northwestern slope of Dan's mountain; its elevation above the Potomac is one hundred feet; the thickness of the bed is three feet, and it is overlaid by sandstone. The second deposit, also at Westernport, called *Paris's bed*, is on the western side of the creek and eastern slope of Savage mountain; its elevation above the river is one hundred and thirty feet; the thickness of the bed five feet, and this is covered by shale and slate.

"The third and most extensive deposit is that at Brant's mine. There are in this place five distinct beds, the lowest corresponding, it is thought, with Murphy's bed; it is covered by sandstone. The second, which is thirty feet higher, is covered by shale; it probably corresponds with Paris's. The depth and elevation of the fourth bed could not be ascertained; and the fifth bed, which is at an elevation of nine hundred feet above the river, is fifteen feet thick. This important deposit is on the Virginia side of the Potomac, and forms the north slope of what is termed the New Creek ridge. The precipitous nature of the mountain slope allows the discharge of the coal, by means of a slide, from each successive stratum into the very bed of the river below.

"A very satisfactory account of the coal mines in the immediate vicinity of Frostburg is furnished in the collection of reports and letters of the engineers of the Chesapeake and Ohio Canal Company, from which the extract above, referring to the extent of this deposit, was also taken:

"In the hills and valley three distinct beds of rich bituminous coal are frequently opened. The first or lowest is near the base of the hills, and is from two and a half to three and a half feet thick. This was first discovered and opened about twenty years ago by Mr. Rizer, and the coal was held in high estimation for many years until the richer beds were discovered. The second bed is from eighty to one hundred feet higher in the hills, and is from four to six feet thick. The third and most valuable mass is found nearer the summit of the hills and the upper parts of the deep valleys. This bed is from eight to ten feet thick, and, like those below, is between strata of rock. The bed on which the coal rests and the roof which covers it are of slate with a great mixture of coal; but the coal diminishes and the slate prevails for three or four feet in thickness. This often gives the mine an appearance of uncommon depth until it is thoroughly opened. But in those mines which are worked to any great extent the bed of pure coal is about eight feet thick, subdivided horizontally by three or four very thin veins of slate, seldom more than half an inch thick. Next above the slate roof is sandstone in thick layers, and often of a quality suitable for the various purposes of freestone in building. A preference is given to those mines that lie deep, which are in a moist situation and have a considerable height of hill over them; the coal from such mines, being more pure and solid, is quarried in much larger blocks, and is much less liable to crumble and waste in handling than that from mines situated so near the top of the hills as to be too dry and to have but little depth of earth over them."—(Pages 93, 94.)

"The analysis of a specimen of the coal from the large bed known as Frost's mine, about half a mile southwest from Frostburg, gave the following results:

Carbon	70.
Bitumen	20.5
Earthy matter	6.
Water	3.5
	100.

"It is thus shown to be of that variety distinguished mineralogically as *slaty coal*, which is ranked among the best, as it burns easily with a bright and durable flame, swells and agglutinates, or *cakes*, as it is termed, and leaves little residue.

"From this view of the extent and condition of the coal deposits in this district, it will be seen that should the projected schemes of communication between the Chesapeake bay and the western waters, by means of canals and railroads, be effected no further even than Cumberland—and there is but little doubt that the communication will soon extend thus far—there will be furnished a convenient outlet for an amount of coal which can be estimated only by hundreds of millions of bushels.*

"But this is not the sole district in which the coal deposits occur. Another, probably of equal extent, lies beyond the Great Backbone ridge, along the valley of the Youghiogony, and extending as far as the most southern limits of Maryland, which, by way of distinction, may be called the *Youghiogony coal district*. It has been remarked of this western coal region that the beds within it are generally thicker than those of the Frostburg district. That bed, for example, which seems to correspond with the fifteen feet vein in Brant's mine, is found, near the heads of the Potomac, to *exceed twenty feet in thickness*. Time, no doubt, may be expected to elapse before these mineral riches will be brought into operation. Far removed from any convenient outlet, the mineral for fuel cannot come into competition with the coal from the more accessible districts; and the employment of it for the purpose of *coking*, applied to the smelting of iron, will not be required so long as our native forests supply in such abundance the means of obtaining the charcoal, by use of which metal of a better quality is obtained. It is, nevertheless, advisable to determine at once the extent and nature of this second coal formation, the greatest portion of which lies within our own limits; and the more so, on account of several of its accessories, whose importance has not been perhaps hitherto fully appreciated.

"One of these is the *iron ore* with which it abounds. *The occurrence of iron ore associated with coal has been considered the most prolific source of commercial prosperity possessed by Great Britain. Her political economists have long been accustomed to ascribe the extent of her manufactures to the abundance and cheapness of both these substances, by which are furnished not only fuel for working the steam engines which put into operation their machinery, but the material also for the construction of this machinery.* The time will come when a similar ascription shall apply to the United States, and when the western county of Maryland shall be looked upon as the Wales of North America.

"On the Youghiogony the *iron ore exists of the best quality and in the greatest abundance*. It is of the variety described by mineralogists under the specific head of *argillaceous oxide of iron*. The following extracts taken from notes made on the spot will give an idea of the circumstances under which it is found to occur:

"1st. *Iron ore bank on the western shore of the Youghiogony.—Argillaceous iron ore*, lying under sandstone; above which, at an elevation of about thirty feet, there is a bed of coal three feet thick overlaid by a stratum of slate ten feet thick; and above this again a deposit of clay with nodules of iron ore. The coal in the upper part of this bed is much mixed with shale, and this with iron pyrites.

"2d. *Nodular argillaceous iron ore* at the mouth of Bear creek, occurring in a bed the depth of which has not been ascertained, and lying under a mixed deposit of debris of *clay slate and sandstone*, the whole covered by a heavy superstratum of ferruginous sand and a deep vegetable soil.

*The last legislature of Maryland passed an appropriation of two millions of dollars, which it is supposed will carry the canal to the coal region.

"3d. *Extensive deposit of clay* on the slope of Winding ridge, east shore of Youghiogeny. This deposit contains nodules of *argillaceous iron ore*. It rests upon the sandstone, and is covered by a continuous stratum of *calcareous marl*; the ore promiscuously extracted from the bed has been found to smelt itself?

"Associated with the deposits there has been observed in the stratum of ferruginous clay, overlying the coal, (as remarked in note 1st, above,) nodules of a mineral substance, consisting of lime, clay, and oxide of iron, answering very nearly the description of what by English writers is termed *Parker's cement*, but better known in this country under the name of *Roman cement*. This article will probably hereafter prove susceptible of most useful application.

"Manganese, some of which is of very good quality, has been found on Bear creek. It occurs also on Keyser's ridge, five miles south of the national road.

"The Youghiogeny furnace, on Bear creek, is situated in the midst of these resources. With an immense amount of water power at command, and under an active and intelligent management, it requires nothing but greater facilities for sending its valuable products to market."

NAVY COMMISSIONERS' OFFICE, *February 18, 1835.*

SIR: The commissioners of the navy have had the honor of receiving your letter of the 10th instant, transmitting a call from the honorable W. Cost Johnson, chairman of the committee of the House of Representatives charged with the investigation of the "propriety of establishing a national foundry, &c.," dated 7th instant; and, agreeably to your instructions, they enclose a copy of your report to the board, from Captain Thomas Ap C. Jones, late inspector of naval ordnance, dated 20th January, 1834. They have not sent the tabular statements referred to in Captain Jones's report, because they are very voluminous, would require probably a month to copy them, and are not, it is presumed, essential to the inquiries of the committee.

The files of the office do not, it is believed, afford any further "information" upon the subject.

Mr. Johnson's letter is herewith returned.

I have the honor to be, with great respect, sir, your most obedient servant,

JOHN RODGERS.

HON. M. DICKERSON, *Secretary of the Navy.*

No. 14.

WASHINGTON, *January 20, 1834.*

To the Board of Navy Commissioners:

GENTLEMEN: My letter of the 5th October informed you of the progress I had made up to that time in the inspection directed by your several orders bearing date April 5, July 22, July 29, and August 12, 1833. I now have the honor to announce the completion of those inspections, as directed in the foregoing orders, and to report in detail the result thereof.

The order of the 5th April requires a "thorough and minute inspection of each gun, and a report in detail of its defects, if any." I had scarcely approached the threshold of the inspection before I found that a tabular form was the only mode by which the information desired by the board could be presented to them in an intelligent shape; and as no form had been furnished me, I felt myself at liberty to adopt such a one as I believed would embrace all the material information required by my instructions, and at one view present the *position* as well as the *relative* condition of every gun inspected. The first column of the table presented herewith contains a number which, as its heading denotes, is an *index* number designed as a guide or reference to any particular gun; the index number is painted in white on the breech of every gun of each denomination, commencing with No. 1, and continuing on in numerical progression to as high a number as there are guns of any one kind at any particular yard or naval station, *always commencing with the lowest number again at each of the navy yards.* The second column, containing letters of the alphabet, is designed to express the class to which each gun belongs; for instance, the letters A, B, or C, marked upon the pomillion of any gun, denote that every gun of that particular denomination, marked with the same letter, *will fit the same carriage*, and is used on the same deck; the third column, headed *marks*, contains the most prominent *old marks* cut, cast, or engraved upon each gun. The headings of the other columns are sufficiently explanatory of themselves; and from which it will appear that, in addition to the objects pointed out by the board, I have embraced *all the dimensions* necessary for the carriage-maker to work by, and for disparting for sights.

The letter A, marked on the pomillion of any *carronade*, denotes that its diameter of bore *corresponds* with the bore of long guns of the same denomination.

The letter O, upon the pomillion of a carronade, signifies that its diameter of bore *is less* than the bore of the long guns of the same nominal calibre.

The broad arrow, thus Ψ^* marked upon the pomillion, with white paint, of any gun or carronade, signifies *condemned as totally unfit for the navy*, for reasons assigned against each condemned gun on the margin of the table.

With these explanatory remarks I might have closed this report; but as I am required to express an opinion of the "number of guns and shot of the several weights and calibres that I consider *serviceable and fit to be used in the navy,*" I feel myself called on to make a few general remarks in support of the opinions I have expressed in the marginal notes appended to the table. I enter upon this part of my report not without much embarrassment, well knowing that navy officers, like doctors, sometimes disagree. The gross number of great guns which have been thus critically inspected is 1,453, exclusive of 789 cannon and gunades; of

* A number of the guns being found at each of the naval stations, which, from age or accident, have become manifestly unfit for service, but having no authority to condemn or mutilate any gun, whatever might be its defects, to avoid confusion, and perhaps fatal mistakes, I have marked them with white paint on the pomillion, with the broad arrow Ψ , to designate them from guns which are perfect of their kind. Guns thus marked are termed *condemned* in the subsequent pages and tables of this report.

this number, 499 are below 18-pounders, and are composed of every *description, shape, and form*, of the manufacture of every nation of the earth that has ever cast a gun. The substitution of carronades for long guns of less calibre than 18-pounders in naval armament renders by far the greater portion of the old guns of and below 12-pounders, in my opinion, unfit for the navy, except such as may be deemed necessary to be retained for *pivot or chase guns* for the schooners and smaller vessels that are now or may be hereafter introduced into the service. But of the heavy metal (18-pounders and upwards) I have more to say, especially in *pronouncing against medium or light guns of any calibre*; that is to say, *battering cannon* which does not contain nearly 200 cwt. of iron to the pound ball; of this denomination there are at the several navy yards at this time, 225 32-pounders, whose average length is only 9 feet 3 inches, weighing from 48 to 52 cwt. That guns of this pattern, throwing a 32-pound ball, *cannot be safe or efficient*, I think needs no argument to prove at the present day. I know that I shall be told that a reduced charge of powder must be used with such guns, and that they must never be *double shotted*. These very precautions are of themselves conclusive evidence of the unfitness of that description of gun for naval warfare; for the fact is, that you cannot materially reduce the quantum of powder from that long and well established charge of one-third the weight of the ball for long guns, without sensibly diminishing both the range and velocity of the ball; and although you do reduce the powder even to one-half of that standard, and train your men to the use of the *single ball, a task infinitely more difficult in practice than in theory*, still the reaction of the piece, and the consequent strain upon the breeching and bolts will scarcely be lessened, for the recoil of a gun does not depend altogether upon the quantity of the powder ignited or exploded, but is governed almost entirely by the weight of the ball or balls to be put in motion by it, and is violent in exact proportion to the approximate weight of the projectile, compared with the gun from which it is discharged; the truth of this position is made manifest from the violent reaction of carronades when two pounds of powder only are frequently used as the *reduced charge* for 32-pound guns of that description. Again, too, for the same reasons, *reducing the charge of powder is not perfect security against bursting*; for gunpowder when inflamed expands with equal force upon the bottom of the chamber, and upon the ball, and for a moment there is a sort of contest between the gun and the ball which of them is to give way; and should the gun be overshot, (a very probable event in the heat of battle,) or even a single ball by any accident get wedged in the gun, it would be as certain to burst with a *reduced* as with a full charge of powder, and the only difference would be, that the damage in the one case might possibly be less than in the other. Admitting, however, that there is no danger to be apprehended from *bursting of light guns*, (an admission, for one, I can never make,) there are other and insuperable objections to their use in the navy, which, in my opinion, far outweigh any advantages which light 32-pounders can possess over heavy 24's on frigate's decks. In the first place, then, in order to diminish the risk of bursting, the medium 32-pounder has *increased windage* from one to two-tenths of an inch, is one-fifth lighter, and one foot shorter than the standard ship 32-pounders used in the navies of Europe, and in this country, too, before the introduction of this new species of ordnance. All of these variations combine to produce one certain and inevitable effect, *viz: greatly to diminish the impetus*, and, consequently, the *range, particularly the point blank*, not only as to *distance*, but most *essentially lessen the chance of accurate firing*. The *want of length*, too, in the medium 32-pounders is a very serious objection to it, the chase of this gun being *too short* to admit of its projecting sufficiently clear of the ship's side even when on an even keel and the gun square in the port; but should it be necessary to use the weather guns in a fresh breeze by the wind, it would be almost impossible to train such guns at all without bringing their muzzles within the ports, and doing more injury by your fire to your own than you would to your enemy's ship. All of, or even any one of, the foregoing objections *more than counterbalance* any positive superiority which the *short, light, or medium 32-pounder* can have over the long 24-pounder, such as the Constitution's battery, or such as have been recently cast for the Pennsylvania. And to illustrate my views, I will suppose two frigates, if you choose, the Brandywine and the Constitution, to be within half point blank range, the Constitution with her heavy 24-pounders, with a reduced charge of six pounds of good powder, firing *two round shot*, against the Brandywine's single 32-pound ball, fired from medium 32's, with the same quantity of powder, *viz: six pounds*, (for the medium 32's will not bear a heavier charge after two or three rounds;) can there be any *doubt* as to the result of such contest? especially if the 24-pounder ship had the advantage of wind, and, by superior sailing, could choose her distance, and take a position forward of or abaft the beam of her antagonist; the leeward ship would, in that case, only be able to bring her guns to bear by yawning off or luffing up in the wind to fire—a mode of fighting which at once destroys *all chance of accurate gunnery*. Is there a captain in the navy who, having the choice of two such ships, would hesitate a moment in making his selection? I can but think that we have been led into a great error in seeking after *heavy metal*, at the expense of everything else, by attributing *certain causes to wrong effects*; and, perhaps, the brilliant success of our frigates mounting 24-pounders over those of our late enemy mounting 18-pounders has been the most fruitful cause of this error, by attributing those gallant achievements to the mere difference of *metal*; that is, to the *difference between the effects of an 18 and 24-pound ball*, when, in point of fact, the great superiority consisted in the superior *skill* and gallantry of our officers and men; and I hazard but little in saying, that had the difference of metal been *against us*, the result would have been nearly the same, for the English 18-pound shot seldom *struck* our ships, even when at close quarters; consequently it would have made no sort of odds what kind of balls they might have fired, for if they *missed their aim* altogether, the 18, 24, 32, or even 42-pound ball would be *quite harmless* in its passage *through the air*. Another objection to the medium 32-pounders now in service is, that although they differ but little in any of the material dimensions, still the same *carriages will not answer for all guns* of that description, as it will be seen that their trunnions are *differently placed*—some below, and some in the centre. This irregularity in the position of trunnions exists in almost every species of ordnance belonging to the navy, except the gradual increase guns, which have their trunnions in the centre; and as the navy board have established *central trunnions* as the navy pattern, a strict regard to uniformity in this important branch of naval equipment would point out the propriety of excluding every other description of guns from our depots and arsenals; otherwise very fatal consequences may arise from the mismatching of guns and carriages. If I have said I have felt delicacy in advancing opinions in relation to the *old* ordnance of the navy, which may be in opposition to those entertained by some of our most experienced commanders, there is yet another branch of the subject which I approach with still greater deference; but called on, as I conceive I am, by a sense of duty to my country, I have no disposition to shrink from its responsibility. By the order of the 5th of April the guns cast for the navy since the year 1816 would be excluded from this report, but the orders of the 22d and 29th of July direct my attention to all guns and carronades in depot. Those under the head of gradual increase consist of long or heavy 42-pounders, long 32-pounders, 42 and 32-pound

carronades, and a set of long 24-pounders for the upper deck of the Pennsylvania; these guns and carronades, except the 42-pounders, I think, are *without fault*, and probably could not be improved on. Of the doubtful utility of using the long 42-pounder on board our ships at all, I shall here say nothing; but if they are to be retained as a *permanent* part of our naval armament, a new pattern ought to be adopted, for the present guns are manifestly *defective in two essential particulars*, viz: in length, the *chase* being *too short* to admit of *free use* through the sides of ships as thick as those of our large class 74's. The other defect is in the turn of the *breech*, which is almost at right angles with the axis of the bore, thereby forming so short a nip over the breech band as to make it very difficult to render the breeching, especially in cold weather, and, in my opinion, would be the cause of rendering useless *many* a gun in course of an ordinary fight.

I now have to speak of another description of guns, of *modern invention*, which, if the concurrent opinions of commanders who have sailed in ships which mount them will pass for anything, are of *more than doubtful character*, and the propriety of retaining them in the navy ought at once to be inquired into, and the question of their capacity to do good service be at once put to rest; for at present, no one, that I have heard speak of those guns, has confidence in them, as the entire armament of a sloop-of-war. I mean the new Congreve, or medium 24-pounders, cast for the ten sloops-of-war built by a special act of Congress, passed March 3, 1825. What I have said in *opposition* to medium, or light 32-pounders, in another part of this report, appears to me to apply with *peculiar force* to this last description of guns.

I will now proceed to close my remarks, making a few observations upon the general condition and state of preservation in which I found the ordnance of the navy at the several depots. The aggregate number (old) of guns and carronades of every description, which passed under my view during the last summer, at Portsmouth, N. H., Charleston, Mass., Brooklyn, N. Y., Philadelphia, Gosport, Va., and Washington, D. C., is 2, 242. These guns are, for the most part, stowed on wooden skids or ways, more or less elevated from the ground, except at the Charlestown yard, where they are ranged on *granite* ways. The guns at Portsmouth, Charlestown, Philadelphia, and Washington, are in a state of tolerable preservation; but at New York, from their exposed situation, being stowed on what is called the block, subjected as they are to the constant action of the salt air by which they are surrounded, and to frequent wetting by the dashing of the spray over the walls during high winds, and the occasional overflowing of the block by high tides, the guns in that depot are in a state of rapid deterioration, which, if not arrested, will in a few years render them all unfit for the navy. Whatever the necessity may have been for placing the guns in that position *while the grading of the navy yard was going on* does not now seem to exist, for the several parks recently enclosed within the yard appear to be the most appropriate places to deposit such of the guns as it may be determined to retain in our service. At Gosport, Va., the guns were in progress of cleaning and restowing; when that work is completed they will be in a better condition to resist the effects of time than they have hitherto been. In the course of this inspection I have had good opportunities of comparing the effects of various compositions used at the different stations for coating iron guns exposed to the weather, none of which seem to be of the least benefit, except that which consists chiefly of *black lead*. On the contrary, every description of lacquer, consisting wholly or in part of bitumen, is manifestly injurious as a covering to iron exposed to the weather, for I found almost invariably, when thick coats of lacquer had been long on a gun, an attempt to remove it brought with it *thick scales of metal*, and left the surface *rough* and uneven; next to the black lead composition, common *cold tar* seemed to be the best preservative for outside coating, but an objection to its use may be in the difficulty of removing it when the gun is required for service.

At the old military arsenal on the Schuylkill, near Philadelphia, I found about eighty pieces of cannon belonging to the navy, which, it seems from tradition, have been lying there more than thirty years, probably ever since the reduction of the navy in 1800; but be that as it may, these guns have taken very good care of themselves, for I found no old guns anywhere else whose exterior as well as interior surface was as smooth and free from rust and scales as those guns are, *both inside and out*; they had been stowed on yellow pine skids, the upper angles of which were chamfered off to a narrow ridge. These skids are supported by pieces of masonry about three feet high, so that the guns, when placed on the *skids*, are about four feet clear of the ground; some of the *skids*, however, have decayed, and the guns have fallen to the ground. The only additional precaution which seems to have been taken to protect these guns from the effects of all-destroying time, was to drive tompons of pine (in length more than the diameter of the bore) firmly into, and even with, the muzzles. The touch-holes, or vents, were plugged with soft pine, forcibly driven in, and the guns were then turned vents down, and so left to time and chance; for I could not discover that any lacquer or coating of any kind had been put on them other than the ordinary painting which they may have had on board of whatever ship or vessel they were last used, and that had long since washed off, leaving the part of the gun most exposed to the pelting storms as naked as *smooth, too*, as when they left the boring-mill.

From the length of time which has elapsed since the date of your first order, "April 5, 1833," it may not be amiss here to remark that nearly three months were lost in waiting for the cylinder shot-gauges which had to be cast at the West Point foundry; and when they were received, an error in their dimensions rendered them unfit for use, as reported by me in a former communication. The progress of inspection was subsequently suspended several weeks, in the execution of your orders to regulate epreuves and prove powder, dated October 9 and 10. The nicety to be observed in many of the admeasurements, as well as magnitude of the work, and the great amount of labor to be performed, would not admit of hurry in the performance of this duty; and notwithstanding no means, within my control, have been left unemployed to insure accuracy throughout, I cannot flatter myself into a belief that some errors will not be found which may make it necessary for myself or assistant to revisit some, or perhaps all, of the stations, to correct, particularly in the *nomenclature* and classification of guns.

The order of the 12th of August suspended a critical inspection of the shot at that time; I therefore made but a superficial examination of them in the course of my tour; but without gauging or handling them at all, I saw enough to justify me in saying that, in general, they require a thorough overhauling, and restowing in proper order, and under cover, without being lacquered, unless black lead is used. This would be a work of much time, and unless some responsible officer (a lieutenant) at each station is assigned to this work, and held accountable for its faithful performance, it will be useless to undertake it.

A report of the number and condition of the small arms will be the subject of another communication, and will be made as soon as time will permit.

All which is most respectfully submitted by, &c., &c.,

THOS. AP CATESBY JONES, *Captain, Inspector of Ordnance, U. N. Navy.*

No. 1.—An abstract account of ordnance at the several navy yards, &c.—Continued.

Every gun, as arranged on the same horizontal line of this table, will fit in the same carriage, and will answer for the same battery, although they are not precisely similar in all their dimensions.

THOS. AP CATESBY JONES, Captain, and Inspector of Ordnance, Unit & Stores Navy.

A table of definitions explanatory of letters and terms used in the classification of naval ordnance.

	Diameter of bore.		Diameter forward of trunnions.		Length.		Weight.	
	Maximum.	Minimum.	Maximum.	Minimum.	Maximum.	Minimum.	Maximum.	Minimum.

Letter A, 1st class of long or heavy 32-pounders, trunnions in the centre.....	6.500	6.400	1.7	1.6	10.8	10.0	63.3	54.2
Letter B, 2d class of long or heavy 32-pounders, trunnions in the centre.....	6.450	6.400	1.7	1.5	10.8	10.2	65.0	55.0
Letter C, 3d class of long or heavy 32-pounders, trunnions below the centre.....	6.500	6.420	1.6	1.6	9.4	9.2	53.2	48.3
Letter B, 1st class of medium or light 23-pounders, trunnions in the centre.....	6.420	6.430	1.6	1.6	9.4	9.3	53.2	48.3
Letter C, 2d class of medium or light 23-pounders, trunnions below the centre.....	5.900	5.750	1.6	1.5	9.9	9.8	50.1	48.1
Letter A, 1st class of long or heavy 24-pounders, trunnions in the centre.....	5.900	5.750	1.6	1.4	10.6	9.3	50.0	46.3
Letter C, 2d class of long or heavy 24-pounders, trunnions below the centre.....	5.456	5.230	1.4	1.3	9.10	9.9	40.0	38.0
Letter B, 2d class of long or heavy 18-pounders, trunnions in the centre.....	5.450	5.250	1.4	1.2	10.7	9.8	44.0	34.0
Letter B, 1st class of long or heavy 18-pounders, trunnions below the centre.....	5.300	5.200	1.4	1.2	8.9	8.4	38.0	30.0
Letter A, gunnado 18-pounders, trunnions in the centre.....	5.250	5.250	1.1	1.1	5-10	4.9	14.0	14.0
Letter A, long or heavy 12-pounders, trunnions below the centre.....	4.650	4.500	1.3	1.0	5-10	9.8	34.0	22.1
Letter A, ship 12-pounders, trunnions in the centre.....	4.800	4.560	1.9	1.0	8-10	7.9	26.3	18.2
Letter A, long or heavy 9-pounders, trunnions below the centre.....	4.400	4.200	1.2	1.0	7-10	8.9	26.3	18.0
Letter A, medium 9-pounders, trunnions below the centre.....	4.300	4.200	1.1	1.0	5-10	6.9	19.0	17.0

Note.—The table of maximum and minimum dimensions, appended to the foregoing table of definitions, explaining the principles upon which, the general classification of guns has been made throughout the following tables, it will be seen that, in all cases, guns which have their trunnions differently placed, are arranged to different classes, although they may differ but little in other respects; for instance, letter B, 2d class of long pounders, have their trunnions in the centre; and letter C, 3d class, the same denomination of gun (but varying materially in general dimensions) have their trunnions below the centre; but for that difference they would have been letter B, 3d class of long 23-pounders. Such, too, is the difference between B and C, medium 23-pounders, A and C, long 24-pounders, or any carmades, denotes that its diameter of bore corresponds with the bore of long guns of the same denomination; and the letter O, upon the nomenclature of a carmado, signifies that its diameter of bore is less than the bore of long guns of the same nominal calibre.

Inspection return of ordnance at the United States navy yard, Portsmouth, New Hampshire.

From 17 to 58, inclusive, are medium 32-pounders; all have raised vent fields for locks; trunnions in the centre, and no breech rings. These guns are horizontally cast, finewy, and uneven exterior; are American manufacture, badly executed; too short, and too light for hard service, and, in my opinion, are unfit for the navy, though I have not marked them condemned.

Inspection return of ordnance at the United States navy yard at Charlestown, Massachusetts—Continued.

These guns have been badly treated; several of them are considerably honey-combed, and scales nearly one-tenth of an inch thick were taken by me from within the calibre of one of the chase guns. These guns are of the same description as those objected to at page 57.

From 23 to 31, inclusive, are 22-pound carronades, have raised vent fields bored for locks, breech rings, and holes for screws; are without other marks or weights on them; are supposed to be American manufacture.

Note.—There was no instrument at the Brooklyn navy yard by which guns could be weighed. A requisition was made by me for a balance of sufficient power to weigh cannon, but, as none could be obtained short of Boston, it did not arrive in time.

No. 22 is a 32-pound carronade, has a screw hole and raised vent field; its breech ring is broken off.

Nos. 33, 34, 35, 43, 44, and 48 have vent fields for locks, breech rings, and screw holes.

From 36 to 43, inclusive, and 45, 46, 47, 50, 53, 54, and 55 are 23-pound carronades, have raised vent fields for locks and breech rings, but no hole for screw.

Inspection return of ordnance at the United States navy yard, Brooklyn, New York—Continued.

Nos. 49, 51, and 52 are 32-pound canonades, have vent fields for locks, screw holes, but are without breech rings.
 No. 50 unfit for the navy; have defective in casting.
 From 53 to 55, inclusive, are supposed to be American manufacture; they are without either marks or weights on them.
 From 55 to 68, inclusive, are 32-pound canonades; all have raised vent fields bored for locks, with breech rings, and holes for screws, except the following, viz: Nos. 68 and 72, which have breech rings, and Nos. 55, 56, 59, 60, 63, 65, 66, 76, 82, 84, 86, and 87 screw holes; are of American manufacture, except the following, viz: Nos. 69, 70, 78, 80, and 83, English make.

Nos. 49 and 50 are long 32-pdrs; have raised vent fields bored for locks; have breech rings, and have trunnions below the centre. Are English manufacture. No. 51, long 32-pounder, built for the navy, being defective in the casting.

From 58 to 80, inclusive, are long 32-pounders; all have raised vent fields bored for locks; have breech rings, and have trunnions in the centre, except the following, which have their breech rings broken off, viz: Nos. 60, 64, 66, 77, and 79. American manufacture.

NOTE.—There must be an error in marking the weight on these guns; for it is manifest that guns, corresponding so nearly as they do in all their dimensions, cannot vary from five to eight hundredweight, as appears by their marks. I had no means of weighing them, but consider about sixty hundredweight to be the true weight.

Inspection return of ordnance at the United States navy yard, Brooklyn, New York—Continued.

Index number.	Class letter.	Mark.	Nature of ordnance.	Diameter of bore.	Length of bore.	Diameter immediately forward of trunnions.	Extreme length from muzzle to position.	Length from extremity of position to bore part of trunnion.	Extreme diameter at the breech.	Extreme diameter at the muzzle.	Diameter of trunnion.	Length of trunnion.	Weight.	Remarks.

From 138 to 143, inclusive, are long 32-pounders. All have raised vent fields bored for locks, and breech rings, except No. 138, which has no breech rings. Nos. 138, 139, 130, 131, 132, 136, 139, 141, and 142 have trunnions in the centre; Nos. 135, 134, 135, 137, and 140 have trunnions below the centre. All are American manufacture.

From 143 to 151, inclusive, are long 32-pounders. All have raised vent fields bored for locks, and have breech rings, except Nos. 146 and 151, which have none. Nos. 146, 147, 148, 149, and 150 have trunnions in the centre; Nos. 143, 144, and 145 have trunnions below the centre; No. 145 is unfit for the navy, being too small in the bore—is 6.300. All are American manufacture.

From 152 to 164, inclusive, are long 23-pounders. All have raised vent fields bored for locks; have breech rings, and have trunnions in the centre. Are American manufacture.

Inspection return of ordnance at the United States navy yard, Brooklyn, New York—Continued.

Index number.	Class letter.	Marks.	Nature of ordnance.	Diameter of bore.	Length of bore.	Diameter immediately forward of trunnions.	Extreme length from muzzle to position.	Length from extremity part of trunnion.	Extreme diameter at the breech.	Extreme diameter at the muzzle.	Diameter of trunnion.	Length of trunnion.	Weight.	Remarks.

From 165 to 184, inclusive, are long 32-pounders. All have raised vent fields bored for locks; have breech rings, and have trunnions in the centre. Are American manufacture.

Nos. 183, 183, and 184 are long 32-pounders. All have raised vent fields bored for locks; have breech rings, and have trunnions in the centre.

From 185 to 194, inclusive, are long 32-pounders. All have raised vent fields bored for locks; have breech rings, and have trunnions in the centre; are mounted on board the Franklin, 74. From 185 to 194, inclusive, are American manufacture, and are said to be part of the Franklin's armament.

Inspection return of ordnance at the United States navy yard, Brooklyn, New York—Continued.

Inspection return of ordnance at the United States navy yard, Brooklyn, New York.—Continued.

Index number.	Class letter.	Marks.	Nature of ordnance.	Diameter of bore.	Length of bore.	Diameter immediately forward of trunnions.	Extreme length from muzzle to position.	Length from extremity of position to fore-part of trunnion.	Extreme diameter at the breech.	Extreme diameter at the muzzle.	Diameter of trunnion.	Length of trunnion.	Weight.	Remarks.
54	B		Long 18-pounder.	5.300	9.0 5-10	1.3 5-10	10.6	5.0	1.8 6-10	1.1 7-10	5.5-10	5-4-10		No. 54, long 18-pounder, has a sunk vent field, no breech ring, and has trunnions below the centre. American manufacture.
1		2	Medium 18-pounder.	5.300	7.0	1.2 5-10	8.4	4.3 5-10	1.6 8-10	1.0 5-10	5.3-10	5-4-10	29 2 0	From 1 to 31, inclusive, and 25, are medium 18-pounders; all have plain vent fields, no breech rings, and have trunnions in the centre, except No. 21, which has a raised vent field let into the gun. Are American manufacture. Most of these guns being under 30 cwt., I very much question their ability to do good service in the navy.

1	A	V	Long 12-pounder.	4.640	7.0	1.2 4-10	8.2	4.1 5-10	1.6	1.1 3-10	4.8-10	4-8-10		From 1 to 10, inclusive, are long 12-pounders; all have raised vent fields bored for locks; trunnions below the centre. From 1 to 7, inclusive, have breech rings. Nos. 8, 9, and 10 have no breech rings. All are English Crown guns, of different patterns, (supposed to have been captured on the lakes during the late war.) It will be seen that these guns, although they may be used on the same deck, and with the same carriages, do not precisely correspond in many of their dimensions. I think they ought not to be retained in the navy.

THOS. AP. CATESBY JONES,
Captain and Inspector of Ordnance, United States Navy.

Nos. 54 and 55, long 9-pounders; have raised vent fields bored for locks; have breech rings, and have trunnions below the centre. Are English Crown guns.
 Nos. 56 and 57 sunk vent fields; no breech rings; trunnions below the centre.
 Nos. 58 and 59, long 9-pounders, have raised vent fields bored for locks; breech rings; trunnions below the centre. From 56 to 59, inclusive, are foreign manufacture; might answer as chase guns for the small vessels.

Recapitulation of gradual increase and classed guns at Brooklyn, New York.

Inspection return of ordnance at the United States navy yard, Philadelphia, Pennsylvania.

Index number.	Class letter.	Mark.	Nature of ordnance.	Diameter of bore.	Length of bore.	Diameter immediately forward of trunnions.	Extreme length from muzzle to position.	Length from extremity of trunnion to fore part of position.	Extreme diameter at the breech.	Extreme diameter at the muzzle.	Diameter of trunnion.	Length of trunnion.	Weight.	Remarks.
1	B	Ship 18 pounder	5.300	7.2 5-10	1.4	8.5	4.3 5-10	1.6 2-10	1.1 3-10	5 9-10	5 8-10	36 1 11	Nos. 1 and 2 are ship 18-pounders; have raised vent fields bored for locks; have breech rings, and trunnions below the centre. Manufacture doubtful. No. 3, ship 18-pounder; raised vent field for lock; no breech ring; trunnions below the centre. English Crown gun. From 4 to 11, inclusive, are ship 18-pounders. All have raised vent fields; have breech rings, and have trunnions below the centre. Are English Crown guns. Are mounted as a saluting battery. From 12 to 34, inclusive, are ship 18-pounders. All have raised vent fields; have breech rings, and have their trunnions below the centre, except No. 22, which has no breech ring. These guns are at the old military arsenal, near the Schuylkill. No. 30 is much strained by service or in proving, and is unfit for the navy.

Inspection return of ordnance at the United States navy yard at Gosport, Virginia—Continued.

Index number.	Class letter.	Mark.	Nature of ordnance.	Diameter of bore.	Length of bore.	Rameter immediately forward of trunnions.	Extreme length from muzzle to pomition.	Length from extremity of pomition to fore-part of trunnion.	Extreme diameter at the breech.	Extreme diameter at the muzzle.	Diameter of trunnion.	Length of trunnion.	Weight.	Remarks.
1	A	84	Long 24-pounder.....	5.800	8.4	1.5 5.10	9.9 2.10	4.11 5.10	1.9	1.2	6	5 7.10	50 0 0	From 1 to 40, inclusive, are 24-pounders; all have raised vent fields bored for locks; all have trunnions in the centre. Nos. 1 to 7, inclusive, and 22 and 31 have breech rings; the rest have no breech rings; the trunnions are slightly tapered. From 8 to 40, inclusive, are part of the Guerriere's armament; all are American manufacture. These guns are roughly cast, and the touch-holes are large and badly bored, departing from 1 to 3 inches from the proper direction; some pricking the cartridge on the side, some in the bottom, and some forward of the centre. It will also be seen that these guns vary very much in diameter of the bore, the difference between the largest and the smallest being .550. The manifest want of skill in the manufacture of these guns which, it is believed, were cast at Hughes's foundry, in Maryland, during the late war; and the fact that one of them did burst on board the Guerriere the first time she had occasion to use them, renders them improper guns to be retained in the navy, for, I imagine, no commander or crew would have perfect confidence in them.

From 1 to 23 are 32-pounder charonades; all have raised vent fields for locks, and all have holes for screws and breech rings. From 1 to 10, inclusive, are American manufacture, and from 11 to 33 English Crown guns, and are part of the Macedonian's armament.

Inspection return of ordnance at the United States navy yard at Gosport, Virginia—Continued.

Index number.	Class letter.	Marks.	Nature of ordnance.	Diameter of bore.	Length of bore.	Length of chamber.	Extreme length from muzzle to position.	Length from extremity of position to centre of nave.	Extreme diameter at the breech.	Extreme diameter at the muzzle.	Diameter of nave hole.	Length of nave.	Weight.	Remarks.	
32	O	P 1798 W G	Cumruade 32-pounder ..	6.900	3.7	4 8-10	5.3 5-10	2.7	1.5 2-10	1.0 6-10	2 6-10	8	17 0 10	<p>From 34 to 50, inclusive, are 32-pound cumruades; all have raised vent fields bored for locks; have breech rings and hole for screw. American manufacture. Said to be a part of the Ontario's original armament, but in consequence of the irregular length of their chambers they have been taken off her. The objection is certainly a substantial one. Nos. 38, 43, 49, and 50 are of this lot.</p> <p>From 51 to 63, inclusive, are 32-pound cumruades; all have vent fields for locks. Nos. 51 and 52 have screw holes and breech rings. From 53 to 63, inclusive, have no screw holes nor breech rings. All are American manufacture.</p> <p>No. 63 same as and said to be a part of the Ontario's armament.</p> <p>From 1 to 39, inclusive, are 49-pound cumruades; all have vent fields bored for locks, breech rings, and holes for screws. American manufacture, and part of the Guerriere's armament.</p>

[2D SESSION.]

ANNUAL STATEMENT OF THE ARMS MADE AND EXPENSES INCURRED AT THE NATIONAL ARMORIES IN 1834.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES MARCH 3, 1835.

WAR DEPARTMENT, March 2, 1835.

SIR: I have the honor to transmit a statement of the expenditures incurred and the arms manufactured at the national armories in the year 1834, prepared in conformity with the provisions of the act of April 2, 1794.

Very respectfully, your most obedient servant,

LEW. CASS.

Hon. JOHN BELL, Speaker of the House of Representatives.

Statement of the expenditures made at the national armories, and of the arms, &c., manufactured therein, during the year 1834.

	Expenditures.					Arms, &c., manufactured.										
	For buildings, canals, and other permanent improvements.	For the manufacture of arms.	For the manufacture of Hall's rifles.	For miscellaneous expenses not embraced in the foregoing.	Total amount expended.	Muskets, complete.	Hall's rifles.	Screw-drivers.	Wipers.	Ball screws.	Spring vices.	Flint caps.	Arm chests.	Bullet moulds.	Flasks for rifles.	Belts for rifles.
Springfield, Massachusetts	\$12,295 44	\$171,839 41		\$388 18	\$184,573 03	14,000		14,706	22,063	1,458	2,032	15,400

The western department comprises all west of a line drawn from the southernmost point of East Florida to the northwest extremity of Lake Superior, taking in the whole of Tennessee and Kentucky; and the eastern department all east of such line, including Fort Winnebago.

The headquarters of the general-in-chief are in the District of Columbia.

The headquarters of the western department are at Memphis, Tennessee.

The headquarters of the eastern department are in the city of New York.

Those officers whose stations are changed by transfers and promotions will report for duty accordingly.

By order:

R. JONES, *Adjutant General.*

23D CONGRESS.]

No. 611.

[2D SESSION.]

STATEMENT FROM THE COLONEL OF ORDNANCE ON THE BUSINESS OF THAT BUREAU
AND THE NECESSITY FOR AN INCREASE OF THE OFFICERS OF THAT CORPS.

COMMUNICATED TO THE SENATE MARCH 3, 1836.

ORDNANCE OFFICE, Washington, February 22, 1836.

SIR: In answer to the communication of the Hon. C. Johnson of the 5th instant, which you referred to this office, inquiring whether any clerkships have been omitted to be reported in the diplomatic bill, or new clerks be necessary in this department, I have the honor to state that by the act of April 20, 1818, (vol. 6 U. S. Laws, page 319,) three clerks were authorized for the office of this department, at the following rates of compensation, viz: one at \$1,150 per annum, one at \$1,000 per annum, and one at \$800 per annum. These have been regularly reported; but owing to the great increase of duties in this office for several years past, it became indispensably necessary to employ additional clerks to those authorized by the act of 1818 for the performance of the current duties; and when it is taken into consideration the immense extent of a department, the operations of which are progressing throughout the whole country, embracing the armament of fortifications, of the troops, of the militia, and the supervision of all the arsenals and armories, it will be perceived that three clerks were insufficient. Large sums of money are annually appropriated for the above objects; the accounts for which, together with those of the property in charge of this department, amounting to many millions of dollars, are regularly and strictly examined in accordance with the ordnance regulations. The duties, therefore, performed in this office are necessarily of the most important character, and involve a degree of practical and general knowledge of military operations which can only be acquired by long attention and perseverance.

The number of clerks and assistant clerks at present employed in this office is eight, and the compensation paid to each is as follows, viz: one at \$1,150 per annum, one at \$1,000 per annum, two at \$800 per annum, and four at \$665 per annum. With a less number it would be impossible for the department to proceed with its operations with a proper degree of energy and efficiency. The duties performed by the clerks are enumerated in the paper marked A, herewith transmitted. It is therefore respectfully and earnestly recommended that that number, with one messenger, be authorized by Congress, and that they be placed on the same footing with the clerks and messengers in the other bureaux of the War Department of similar importance.

I have the honor to be, sir, respectfully, your obedient servant,

GEORGE BOMFORD, *Colonel of Ordnance.*Hon. LEWIS CASS, *Secretary of War.*

P. S.—By a calculation made some time since, it was found that the nature of the ordnance and ordnance stores in charge of the ordnance department *proper* amounts to upwards of fifteen millions of dollars. This estimate is exclusive of the property at the forts and in the hands of the troops.

A BILL for the better regulation of the ordnance department.

SECTION 1. *Be it enacted, &c.,* That the President of the United States be, and he is hereby, authorized to add to the corps of ordnance, whenever he may deem it expedient to increase the same, ten first and ten second lieutenants, to be selected from the army; and that the pay and emoluments of the officers of the said corps shall be the same as those allowed to the officers of the regiment of dragoons.

SECTION 2. *Be it enacted, &c.,* That all officers and enlisted men of the ordnance department shall be subject to the rules and articles of war.

SECTION 3. *Be it enacted, &c.,* That all letters and packages to and from the chief of the ordnance department which may relate to his official duties shall be free of postage.

Reasons for the proposed act for the better regulation of the ordnance department.

The importance and extent of the duties confided to the ordnance department demand that all proper aid should be afforded for their prompt and efficient discharge.

Although the law provides for the selection of lieutenants from the regiments of artillery to assist in the performance of ordnance duty, the requisite number can seldom be spared from their companies, and at this time in particular the detail is broken down by demands for the service in Florida. The officer commanding one of the principal arsenals of construction is now without a single assistant. Another arsenal of construction is in charge of an artillery officer. Two extensive arsenals now erecting are supervised—one by an artillery officer, the other by a military storekeeper. Two other arsenals are in charge of storekeepers—one important arsenal and another of less consequence in charge of ordnance sergeants. The whole force of the department is devoted to providing the *matériel* called for at the present crisis, for arming the forts, and the frequent change of officers cannot but impair its energies and impede its operations. Previous to the reduction in 1821 the corps numbered forty-four officers. The proposed increase will make it consist of thirty-four, which is the least number than can be considered sufficient to perform the duties, extended as they have become since that period.

Pay, &c.—By the act of the 14th of May, 1812, ordnance officers were allowed the rank and pay of infantry officers, with additional rations, and to the captains forage. The law of February 8, 1815, gave to all ordnance officers the pay of dragoons, with the exception of forage to those below the rank of field officers. This pay was continued till the reduction in 1821. The public duties of an officer in command of an arsenal require him to travel in a limited circuit to procure necessary supplies, and the existing

regulations do not permit a charge for transportation when the distance travelled is less than twenty miles. The command of an arsenal is equal to the command of a company in all matters relating to responsibility. The captain of a company receives and issues the clothing and arms for his company and makes the quarterly returns. The captain at an arsenal performs the same duty, and is further responsible for large amounts of public property in his charge, and makes the various returns quarterly, semi-annually, and annually. He does not command a company in the technical sense of the term; but he commands men, and is responsible for their arms and clothing.

ORDNANCE OFFICE, *Washington, January 26, 1836.*

23D CONGRESS.]

No. 612.

[2D SESSION.]

COMMUNICATION FROM THE SECRETARY OF WAR ON THE EXPEDIENCY OF OBTAINING MORE LAND FOR FORT McHENRY, NEAR BALTIMORE.

COMMUNICATED TO THE SENATE DECEMBER 13, 1831.

[But not being found on the files when sought for, and being found out of place, is here inserted.]

DEPARTMENT OF WAR, *December 10, 1831.*

SIR: In compliance with a resolution of the Senate, dated 14th of January last, directing the Secretary of War "to report to the Senate in the first week of the next session of Congress whether any land adjoining Fort McHenry be necessary for the safety of the fortifications, and if any, what number of acres, and at what price the same may be purchased," I have the honor to enclose a report from the chief engineer recommending the purchase of twenty-five acres for that object, in which I concur.

I have the honor to be, very respectfully, your obedient servant,

LEWIS CASS.

THE PRESIDENT OF THE SENATE of the *United States.*

ENGINEER DEPARTMENT, *Washington, December 10, 1831.*

SIR: The views of this department on the subject of the purchase of additional land near Fort McHenry are represented in the accompanying report, made in pursuance of a resolution of the Senate of the United States, which was referred by you to this office.

I am, respectfully, sir, your obedient servant,

C. GRATIOT, *Brigadier General, Chief Engineer.*

THE HON. SECRETARY OF WAR.

FORT ADAMS, *Newport Harbor, Rhode Island, July 13, 1831.*

SIR: The undersigned have the honor to present a report on the subject of the following resolution of the Senate, committed to them by your letter of June 15, 1831:

"IN THE SENATE OF THE UNITED STATES, *January 14, 1831.*

"Resolved, That the Secretary of War be directed to report to the Senate in the first week of the next session of Congress whether any land adjoining Fort McHenry be necessary for the safety of the fortifications; and if any, what number of acres, and at what price the same may be purchased."

Believing that in the report of the commissioners appointed to examine the southern coast with a view to the selection of a site for the southern naval depot we might find presented to government the general principles on which the defence of the approaches to the city of Baltimore must depend, we refer to the report, which was made in February, 1819, and is signed by L. Warrington, captain United States navy; J. D. Elliot, captain United States navy; Bernard, brigadier general; W. K. Armistead, colonel of engineers; W. McRee, major of engineers.

Concurring fully in the views there expressed, we deem the position of Fort McHenry of secondary importance. The work is, however, already constructed; it is in good condition, and we think should be maintained as a part of the system of defence. Although this work ought by no means to be the sole reliance of the city against an attack either by land or water—against the former especially it presents no obstacles—still it will tend to augment considerably the impediments to attacks by vessels alone, and will serve other purposes of use and convenience.

In the event of an attack merely naval, the importance of this second barrier up to the period of the entire completion of the lower works—a day yet, probably, very remote—is manifest; and even after that day, such vessels as might succeed in forcing the lower barrier would encounter in this one adequate, under the circumstances, to prevent further progress. It will guard the city and the shipping in the inner harbor from boat enterprises, which might, under cover of darkness, by passing under Sollers's Point and the battery "on the extreme end of the flat of Sollers's Point," elude the lower works. It will afford a convenient point of embarkation for troops or stores destined for the lower works, especially in case a line

of obstructions shall have been, for greater security, thrown across from this point to the Lazaretto. It will be convenient as one of the points of concentration for troops arriving to the relief of the city, enabling them, by steam or other boats, to reach with greater despatch any point below on either shore—in front, in flank, or in rear of an enemy.

Such considerations as these, leading us to the conclusion above stated, namely, that Fort McHenry should be maintained as a part of the system of defence, we come now to the particular subject submitted to us.

The present boundary of the public ground scarcely extends on the land side beyond the limits of the fort, and a large brick building, rising high above the parapets, and completely commanding the fort, has long stood within a few yards of the walls. If this fort were ever placed under circumstances admitting the slow operations of a siege, still the feebleness of the work and the nature of the ground would render all labors of that sort nearly superfluous; at least all distant labors. At the distance of three or four hundred yards the ground assumes, with some abruptness, a lower level unseen by the work, which level is of some extent. It is short of this low ground, therefore, that the chief action of the fort, as to resistance of attack, is restricted. By taking this distance as a new boundary of the public ground, we shall preserve to the fort its full powers, and we shall, moreover, protect it from the command of buildings which may be erected on the contiguous private lands. These buildings will have a greater altitude than the fort, but, while thus remote, the fire of musketry will be too uncertain to hasten the reduction of the work.

In conclusion, therefore, we have to state that it is, in our opinion, absolutely necessary that the public boundary should be extended considerably landward, and we recommend that the new boundary be a straight line across the Neck, distant from the northwest salient of the fort 300 yards, corresponding with the eastern side of Martin street, on Poppleton's map of Baltimore.

The private land comprised within this limit will be twenty-five acres. The cost thereof will be about ten thousand dollars.

We have, &c.,

JOS. G. TOTTEN, *Lieut. Col. Engineers, Bvt. Col.*

A. MORDECAI, *Lieut. Engineers.*

Brigadier General CHARLES GRATIOT, *Chief Engineer.*

24TH CONGRESS.]

No. 613.

[1ST SESSION.]

ANNUAL REPORT OF THE SECRETARY OF WAR, SHOWING THE CONDITION OF THAT DEPARTMENT IN 1835.

COMMUNICATED TO CONGRESS, WITH THE ANNUAL MESSAGE OF THE PRESIDENT, DECEMBER 8, 1835.

DEPARTMENT OF WAR, *November 30, 1835.*

SIR: In conformity with your instructions, and with the usage of this department, I have the honor to lay before you a statement of its operations during the past season, and reports from the various bureaus, exhibiting in detail their respective proceedings, as far as these appear to be sufficiently important for communication in the usual annual statements.

The general positions of the army remain the same as at the time of my last report. Some movements, however, have taken place which it is proper should be specially brought before you.

Fourteen companies have been placed under the command of General Clineh, in Florida, with a view to impose a proper restraint upon the Seminole Indians, who have occasionally evinced an unquiet spirit, and to insure the execution of the treaty stipulations providing for the removal of these Indians. As soon as this takes place these troops will resume their proper positions.

The regiment of dragoons has been usefully employed in penetrating into the Indian country; in exhibiting to the Indians a force well calculated to check or to punish any hostilities they may commit, and in adding to our geographical knowledge of those remote regions. Colonel Kearney, with one detachment, marched through the country between the Des Moines and Mississippi rivers; Colonel Dodge, with another, made an excursion south of Missouri towards the Rocky mountains; and Major Mason, with a third, joined by a detachment of infantry, was employed in duties connected with the assemblage of a body of Indians at the Cross Timbers, near the Great Western Prairie, for the purpose of establishing permanent pacific relations between the remote wandering bands and the United States and the more agricultural Indians, who have migrated under the public faith to that region, or who seemed disposed to improve their condition by more settled habits. The duties committed to these troops have been well performed.

The information concerning the discipline and *morale* of the army is satisfactory. The officers are engaged in a great diversity of duties, growing out of various acts of Congress, many of which have no direct connexion with their professional avocations. These duties are satisfactorily executed, and the expenditures to which they lead are generally made with fidelity and accounted for with promptitude.

I beg leave to ask your attention to the report of the chief engineer, in relation to the state of the corps under his command. The number of officers in that corps is not sufficient for the performance of the various duties committed to it. The consequence is that in some instances the public works have been neglected or delayed, and in others they have been prosecuted by those who had not the necessary professional skill and experience. Persons in civil life possessed of competent scientific knowledge will not often enter into the temporary service of the government for such compensation as is provided by law for the engineer officers. The progress of improvement through the country creates a demand for those qualifications which are required in the military and topographical engineer service; and a higher rate of

compensation is allowed than it has been the usage of this department to grant. A gradual and moderate addition to the corps offers the only remedy for this state of things; and I am satisfied that considerations of economy, as well as a due regard to the proper execution of a most important class of public works, call for this arrangement.

The same considerations apply in a considerable degree to the topographical corps, and I ask your favorable consideration for the measure recommended by the officer at the head of it. One of the plans suggested will accomplish the object without any addition to the public expenditures, and will make adequate provisions for a branch of service connected with the defence of the country, and which has also the advantage of furnishing information that may prove highly valuable to every portion of the community.

Agreeably to a provision in an act of the last session of Congress that part of the Cumberland road between the town of Cumberland and the Ohio river has been surrendered to and accepted by the States through which it passes; and arrangements have been made, by the authority of these States, for the collection of such tolls as will keep it in proper repair. The funds appropriated for the completion of this road have been applied to the object and will be fully adequate to its attainment. The work, with the exception of some of the bridges and of a few necessary repairs, is nearly finished and is passable in its whole extent. All accounts concur in representing it as constructed in the most faithful manner. Captain Delafeld, who has superintended the operations, and the officers engaged with him, are entitled to commendation for the zeal and professional ability they have displayed.

The United States are exonerated from all future claims on account of this road, while competent provision has been made for its preservation.

The progress in the other works of internal improvement is shown in the report of the chief engineer. Among these, one of the most remarkable, as well from its great importance as from the unexpected facility with which it has so far been executed, is the removal of the raft over Red river. An immense body of timber, extending one hundred and eleven miles along that stream, had covered a large portion of its surface and interrupted all communication. This has probably been collecting for ages; and not only was this great natural highway thus shut up by it, but a fertile and extensive region along the river was inundated, and the whole country in its vicinity subject to local diseases having their origin in this submersion.

This work has been in progress upon the present system little more than two years, and the whole expenditure, including a sum of twenty-three thousand dollars, which was applied in previous experiments that failed, has been about one hundred and thirty-five thousand dollars. It is estimated that an additional appropriation of forty thousand seven hundred and thirteen dollars will be required to complete it; and which, with the sum of ten thousand dollars now in the treasury, will make for the whole cost one hundred and eighty-five thousand seven hundred and thirteen dollars. The river has been cleared for a distance of eighty-eight miles, and there yet remain twenty-three miles of obstructions to remove. This portion it is expected will be finished early in the next season if the necessary appropriations are made in time.

Before the present plan of effecting this work was adopted, there were various projects suggested for its accomplishment; but the most sanguine projector could not have anticipated such a great physical change as is already taking place within the time and the means that have been devoted to the work. A loose estimate of the land which will be reclaimed and rendered valuable by this improvement, which has been made by Colonel Brookes, formerly Indian agent in Louisiana, and intimately acquainted with the region upon Red river, places it at upwards of a million of acres; and it will form one of the most productive districts in the Union. This operation, as a mere matter of pecuniary value, will return many times the amount expended upon it.

I have brought the subject to your view at this time, not only on account of its intrinsic importance, but from the encouragement it affords to the introduction and prosecution of a system of improvement by which the public lands upon the lower Mississippi and some of its tributaries may be reclaimed from their present condition and rendered fit for agricultural purposes. Whether the object be attainable within the limits of a reasonable expense, there are not satisfactory data for determining. But its great results to the country, in health, in power, and in wealth, are obvious.

No appropriations having been made at the last session of Congress for the prosecution of the works upon the fortifications, it has been deemed proper to submit additional estimates for these objects. And as some of the forts first commenced have been completed, estimates have also been approved by you for the commencement of others, which have been recommended by the board of engineers in the continuation of the system of defence devised by them and submitted to Congress. A number of our most important harbors and inlets are yet either wholly undefended or so partially protected as to render their situation altogether insecure in the event of exposure to hostile attempts. An adherence to the general plan of defence, and a gradual prosecution of the work as the national finances and other considerations may justify, seem to be demanded by a just regard to the circumstances of the country as well as by the experience which the events of the last war forced upon us.

In addition, however, to these permanent fortifications, there are some of our most extensive roadsteads in which floating steam batteries ought to be employed. Among these are the Chesapeake and Delaware bays, and the harbor of New York. The peculiar situation of these estuaries, as well with relation to their exposure as to the best measures for their defence, and the immense value of the navigation and commerce of which they are the outlets and inlets, render their security a matter of deep interest to the whole country. When the present system of defence was projected, I understand the board of engineers contemplated the eventual construction of these movable batteries as a part of their plan. The great improvements which have since taken place in all that relates to the application of the power of steam furnish additional motives for providing these co-operative defences. Alternately protecting and protected by the fixed batteries, these movable ones will be found to be of the highest importance. In fact, with an adequate force of this description stationed in the vicinity of our permanent military works, and enabled to take refuge under their cover whenever necessary, a hostile fleet would scarcely venture to pass the position, and thereby expose itself to the hazard of annoyance in detail, and of being captured or destroyed whenever a calm, a change of wind, or any other of the many accidents to which a maritime force is liable, might furnish a favorable opportunity for the action of the steam batteries. Our Atlantic frontier will not be properly secured till this means of efficient co-operation in its defence is introduced.

In my last annual report I communicated the facts which appeared to render it proper that the

operations upon two of the most important works, Fort Calhoun and the Delaware breakwater, should be temporarily suspended. Experiments have been made to test the effects and probable extent of the causes which were in operation, and which threatened to injure, if not destroy, the utility of these works. It is believed that the depression of the foundation of Fort Calhoun is so nearly checked that further danger is not to be apprehended. But, as will be seen by the report of the quartermaster general, the experiments at the breakwater have not been so decisive as to settle the question connected with that work; and it has been thought best to ask of Congress an appropriation only for one hundred thousand dollars, which, under any probable circumstances, can be judiciously expended. It is to be hoped that the experiments which will be continued, and the scientific examination it is proposed to make next season, will furnish data for a just conclusion on the subject of this important structure, and indicate either that the causes which have threatened to injure its utility have produced their full effect, or that they may be counteracted by some change in the original plan. This artificial harbor is too valuable to an extensive commerce peculiarly exposed not to engage every effort in completing it and preserving it from destruction.

The report of the visitors appointed to inspect the Military Academy, and the documents transmitted by them, are submitted for your consideration, together with the suggestions they have made, and which are calculated, in their opinion, to promote the efficiency of that institution. These annual examinations by a body of highly respectable citizens, called from various parts of the country, are not only useful as checks upon any improper tendency to which all public establishments are more or less liable, but they are satisfactory when they bear testimony to the value of the system and to the correctness of its administration; and practically advantageous by the suggestions they offer. That improvements may be made in the several departments of the Military Academy cannot be doubted; nor can it be doubted that a thorough examination by Congress of its various concerns, whether administrative, financial, or instructive, would be highly useful, and would tend to its permanent melioration. Its results, so far as these can be judged by the character, conduct, and qualifications of the officers of the army, about two-thirds of whom have been educated at this institution, have been decidedly beneficial. The standard of acquirement for the military profession has been raised; habits of discipline and subordination, necessary first to learn before the duty of command can be properly executed, have been acquired; elementary knowledge peculiarly adapted to a military life has been more extensively and accurately taught, and we have been better enabled to keep pace with those improvements which the nations of Europe have made and are making in this important branch of modern science.

Agreeably to your permission, I have introduced into the estimates an additional sum for the armament of the fortifications. Without going into any unnecessary detail upon this subject at the present time, I will barely remark that this measure is called for by the actual state of our preparations, and by a provident regard for the duty of self-defence. If no increase takes place in this branch of the service, many years must elapse before our fortifications and arsenals are sufficiently provided.

A resolution passed the House of Representatives at the last session requiring the Secretary of War to procure certain information having relation to the establishment of a national foundry in the District of Columbia. The information which has been collected will be communicated in obedience to the resolution; but I am so impressed with the importance of the measure, that I am induced to bring it to your notice in this report.

The United States have no establishment for the manufacture of cannon. The supplies wanted, as well for the field artillery of the army and militia as for the armament of the fortifications, are now procured from four private foundries—one near Richmond, one at Georgetown, one opposite West Point, and one at Pittsburg—which appear to have been established at several periods in the expectation that their products would be received by the government as the public necessities might require, and at such prices as might, from time to time, be judged reasonable. As there is no private demand for this manufacture in our country, it is obvious that no person would make the requisite preparations, which are understood to demand considerable investments and the employment of skilful workmen practically acquainted with this branch of business, unless expectations of a just reimbursement were held out. Contracts for limited periods have from time to time been made, providing for the delivery of stipulated quantities; but, as I had the honor to communicate to you in my annual report of November 21, 1831, the act of Congress of March 3, 1809, seems to present serious difficulties in the way of such an arrangement, and since that time no formal contract has been made for the supply of cannon. The proprietors of these foundries have been annually informed that, if the appropriations would permit, and if cannon of designated quality and size were fabricated, these would be purchased. In this manner the subject has lingered, without any action on the part of Congress, and without any authority on the part of this department to make more efficient arrangements. During the present year the appropriation for the armament of the fortifications has been principally expended in procuring iron gun-carriages; and the foundries have not been employed in the fabrication of cannon for the military branch of the service. It is believed that this circumstance, by deranging their operations, has been seriously injurious; and if it again occur, it may induce some of them to discharge the workmen specially employed upon this business, and who may hereafter be collected with great difficulty. The government now depends upon this temporary and uncertain arrangement for the supply of this indispensable element of national defence. The circumstances which required a change I had the honor to submit four years since. They have lost none of their force during the period which has intervened; and, independently of the considerations presented, having relation to the uncertain condition of these establishments, there are others, bearing upon the quality of the material and of the workmanship, which render it important that the government should be its own manufacturer of this article. The cost of cannon, while this is kept within a reasonable limit, is not an object compared with the two qualities of strength and lightness. With the exertions of the present manufacturers of cannon, so far as the necessary facts are known to me, I have reason to be satisfied. But it is sufficiently obvious that in a branch of business where a slight difference in the material and slight neglect in the process may produce irremediable mischief, and where, from causes not easily ascertained, these defects may disclose themselves in the midst of the most active service and after the guns have resisted all the usual proofs, the manufacture of the article should be carried on where these neglects are least likely to happen; where, in fact, there can be no interest to use any other than the best materials nor to employ any other than the most skilful artisans. Time and experience are necessary to found and perfect an establishment for this purpose upon a scale suited to our wants.

It does not seem necessary to exhibit in detail the number of cannon now in the possession of the government and distributed in its forts, arsenals, and temporary posts; and the number that will be

required to complete the armament of the fortifications already constructed, of those in the process of construction, and of those projected, and the number necessary for the proper demands of field service. It is sufficient to observe here, that the quantity is far more than enough to justify extensive and vigorous arrangements; and this without reference to the accidents of time and service, which must always operate to reduce the stock on hand.

Such an establishment as the one contemplated could be employed as well for the navy as for the army; but, while I allude to its general usefulness, it is proper I should avoid all details peculiarly appropriate to another department.

The defective organization of the militia is universally acknowledged. But little practical utility results from the administration of the present system, and if this great element of national defence is worth preservation and improvement, it is time the whole subject should be examined, and that a plan suited to the exigencies of the country should be adopted. I am unwilling to believe that there are such inherent difficulties in this subject as to render it impracticable, or even very difficult, to organize this great force, so peculiarly adapted to our institutions, and in such a manner as to render it active and efficient in those junctures when the country may be called on to exert its power. I presume few would be found to advocate the maintenance of a standing military force adequate to all the purposes of peace and war. When, therefore, those exigencies arise, from which no nation can expect exemption, and which call for an extension of our physical means, we must resort to an increase of the army or to the embodying of the militia. It is obvious, from the extent of the country, that we can never keep at all the exposed points such a permanent force as circumstances may occasionally require. The natural and, in fact, the necessary dependence must be upon the militia; and if it be unorganized, we shall be found without the means to repel a foreign enemy or to repress internal disturbances, should these evils occur. To depend upon organizing a system when the exigency arises is to reject all the lessons of experience, and to procrastinate for examination what should then be the subject of action. Besides, a permanent plan of organization should be devised in a time of leisure and peace, so that it may be introduced and thoroughly known before the force provided by it is required to be exerted. It should, as much as possible, be engrafted upon the habits of the country, and become a part of our institutions. The basis of an efficient organization of the militia must be a selection, for instruction and service, of that part of the population best qualified for these duties. Age and physical capacity present the proper considerations for such a selection. The principle is stated, with his usual force, by Mr. Jefferson in his message to Congress of December, 1805, wherein he said:

"Whether it will be necessary to augment our land forces will be decided by occurrences, probably, in the course of your session. In the meantime you will consider whether it would not be expedient for a state of peace, as well as of war, so to organize or class the militia as would enable us, on a sudden emergency, to call for the service of the younger portions, unincumbered with the old and those having families. Upwards of three hundred thousand able-bodied men, between the ages of eighteen and twenty-six years, which the last census shows we may now count within our limits, will furnish a competent number for offence or defence in any point where they may be wanted, and will give time for raising regular forces after the necessity of them shall become certain; and the reducing to the early period of life all its active services cannot but be desirable to our younger citizens, of the present as well as future times, inasmuch as it engages to them in more advanced age a quiet and undisturbed repose in the bosom of their families. I cannot, then, but earnestly recommend to your early consideration the expediency of so modifying our militia system as, by a separation of the more active part from that which is less so, we may draw from it, when necessary, an efficient corps fit for real and active service, and to be called in regular rotation."

Had the general principles here recommended been practically adopted and a corresponding system established, with the necessary details, first for instruction and then for active service, it cannot be doubted that the course of events which marked the commencement of the late war would have been avoided, and an immense expenditure of blood and treasure saved to the nation. The warning voice which was not heeded then may perhaps be heard now; and if it is, it may produce incalculable benefits.

A board of officers of the army and militia was organized some years since, under the instructions of this department and by virtue of a resolution of Congress, for the purpose of examining this subject and of devising a practicable plan for the organization, improvement, and efficient action of the militia. Their report contains the outline of a *projet* which, with some modifications, appears to me to combine as many advantages as any other that can probably be adopted. The basis was a classification of the adult male population of the United States, and a selection of as many persons from it, above the age of twenty-one years, as should be necessary to complete the number required to be enrolled and organized at all times for actual service, beginning in all cases with the youngest above the prescribed age. Their report stopped at the number they deemed necessary for constant equipment. As regards instruction and preparation, this limitation is no doubt proper; but still it would probably be deemed advisable so far to organize the whole body, within certain ages, as to produce a classification and to afford the requisite facilities for calling them into service in succession, should any contingency demand a larger force than the first division could supply. This arrangement would render available for the defence of the country its whole physical force—not that any event could require it all to be embodied at the same time, but because a particular section might sometimes be peculiarly exposed, and call for the services of a large proportion of its population; and the continuance of the pressure might render it necessary to discharge in succession those who had performed their prescribed terms, and to require the services of others.

A mere organization would avail but little, unless inducements were held out for proper instruction and equipment. And I consider, therefore, some provision for elementary instruction and for such equipment as may be necessary to excite a proper emulation indispensable to any improvement of our militia system—indispensable, I may add, to its very existence. An arrangement for these objects would embrace the first class only. It would, to be sure, involve expense; for an adequate compensation must be allowed to the persons required to be embodied at these schools of instruction a few days in the year. And it would probably be found expedient to continue the present plan of voluntary corps, with some changes, and to require them also to meet for improvement. It is in vain to expect that the whole adult male population of the country can or will furnish themselves with the articles required by law, or that their collection for any number of days they can afford to devote to this object, and under the usual circumstances of such assemblages, can produce any beneficial effect to themselves or their country. Already in a number of the States the system has sunk under the weight of public opinion; and the practical question now is, whether we shall remain, in fact, defenceless, or resort to a large standing military force

in time of peace—that just dread of all free governments—or adopt an efficient plan which will prepare for the public defence the greatest force at the least cost and without danger. The blessings we have inherited cannot be preserved without exertion nor without expense. It were idle to sit still and flatter ourselves with the hope that war is never to overtake us; and it would be worse to delay all efficient organization of our physical means till the time for its active employment arrives. Nearly fifty years have elapsed since the adoption of the present Constitution. During all that time no essential change has been made in our militia system, and it has gradually declined in utility and efficiency, and in public confidence, and there is reason to fear its entire abandonment unless it undergoes important modifications. In this long interval the value of the system seems to have been appreciated by all the Presidents of the United States, as well those who, from the habits of their lives, could best estimate its value by their personal observation, as by those whose opinions may have been well formed from the course of events having relation to this matter; and in their annual communications, commencing with the inaugural address of General Washington, this subject has been almost constantly pressed upon the attention of Congress. For the purpose of showing its importance in the opinion of these eminent citizens I have caused their communications to be examined, and find that the subject has been presented to the legislature and the nation no less than thirty-one times in their official recommendations. I indulge the hope that the present state of public affairs may lead to a re-examination of the system, and to such changes as may render it permanently useful.

I am gratified in being able to announce to you that the Indians residing east of the Mississippi river appear to be yielding to the conviction that their removal to the territory assigned for their residence in the west offers the only rational prospect of any permanent improvement in their condition, and that this measure is essential to their prosperity. Both in the north and south the reports of the officers having charge of this matter are encouraging, and we may anticipate the full establishment of our present policy, and with the fairest prospects of success, if the pre-existing prejudices, which have so long operated to retard our efforts, can be removed.

The considerations which render this change of residence necessary are sufficiently obvious, and are founded upon the results that have heretofore attended our intercourse with the Indians. The causes which have so long continued to reduce and depress them in their present situation within our borders are yet in active operation. Their food, derived from the chase, is disappearing. Their habits are inveterate and they cannot or will not accommodate themselves to the new circumstances which press upon them in time to save themselves from extinction. And, above all, their contact with a white population has entailed and is entailing upon them evils which, if not checked, must lead to their ruin. They appear to acquire with much greater facility the vices than the virtues of civilized life; and during the whole period they have been known to us they have abandoned themselves, with strange improvidence, to the use of ardent spirits. From my own observation of the Indian character I consider the indulgence of this habit as the great barrier against any improvement of that portion of this race which, from their position, are enabled at pleasure to gratify this propensity. The difficulty of putting a stop to this traffic while the Indians are intermingled with our citizens is sufficiently obvious. And if they are to be rescued from its effects, they must be removed beyond the sphere of the traffic. This is certainly one of the most prominent reasons for the faithful prosecution of the system, and Congress, apparently impressed with its force, has provided by law that all ardent spirits found in the Indian country may be destroyed. The agents of the government will not now be compelled, as formerly, to resort to legal process for the interdiction of this traffic, at the hazard of the trouble, expense, and uncertainty attending such prosecutions upon a remote frontier.

I consider the experiments which have recently been made to provide for the maintenance of the Indians, by reservations for their use, and with the power of alienation, however guarded, to have wholly failed. These tracts are too often sold for a very inadequate consideration, and the amount received is dissipated in expenditures either positively injurious or altogether useless.

As soon as the remaining tribes shall have been established in the west, we may look forward to a happier destiny for the Indians. And if this expectation be disappointed, the failure must be attributed to the inveterate habits of this people and not to the policy of the government. The arrangements for the comfortable establishment of the Indians have been projected upon a scale suited to their wants and condition and to the duties of the United States. With a view to appreciate the advantages which have been secured to them, I deem it proper briefly to recapitulate the provisions that have been made. These are not applicable in all their details to each tribe, as some receive more and some less in amount, while certain articles are given to some and not to others. But the general principles of distribution apply to all. An extensive country has been reserved for them and has been divided into districts for the several tribes. To this they are removed at the expense of the United States.

They are provided with the necessary subsistence for one year after they reach their new residence. Annuities, in specie, to a greater or less amount are payable to each tribe.

Agricultural instruments, domestic animals, seed corn, salt, looms, cards, spinning wheels, iron, steel, cloths, blankets, rifles, ammunition, and other articles are distributed among them.

Mills are erected and kept in operation. Council-houses, churches, and dwelling-houses for chiefs are built.

Mechanics are engaged and supported, schools are established and maintained, and the missionary institutions among them are aided from the treasury of the United States.

These are the principal arrangements made for the benefit of this unfortunate people, who will soon have been removed, at great expense, when this new system will be in full operation, and where their peculiar institutions can be preserved, with such modifications as a progressive state of improvement may require. They will be separated, too, from the settled portions of the country by a fixed boundary, beyond which our population cannot pass.

The operations of the department of Indian affairs are shown in detail by the report of the commissioner and by that of the commissary general of subsistence. It was anticipated that a considerable body of the Creeks of Alabama would, ere this, have been on their way to the west. But recent information induces the belief that their journey has been postponed, but under circumstances which will probably insure their early removal in the spring. The treaty with the Seminoles of Florida for their removal is in the process of execution. A portion of the tribe were not prepared to go at the time arrangements were first proposed to be made for their removal, and when, by the treaty, they might have been required to depart. At their earnest solicitations the measure was postponed until the coming

winter, and assurances were given by them that they would then be prepared to remove. A majority avow their readiness to comply with their engagements, and will no doubt quietly go as soon as the arrangements for their departure shall have been completed. But some of them exhibit a refractory spirit, and evince a disposition to remain. As they now hold no land in Florida and would become a lawless banditti if suffered to remain, their pretensions cannot be submitted to. They will, probably, when the time for operation arrives, quietly follow their countrymen. Should they not, measures will be adopted to insure this course, equally dictated by a just regard to their own welfare as well as to that of our citizens in the vicinity of their residence.

Governor Stokes, General Arbuckle, and Major Armstrong were appointed commissioners to make a treaty with the roving tribes of Indians who inhabit the great western prairie, with the view of establishing permanent pacific relations between these predatory tribes and the United States, and also between the same tribes and the other Indians of that region. The lamented death of Major Armstrong deprived the government of the services of that valuable officer; but the other commissioners succeeded in effecting a pacification, which I hope will lead to a friendly intercourse among all the tribes in that quarter.

Under the authority of an act of the last session of Congress, an arrangement has been made by Colonel Brookes with the Caddo Indians, for the cession of their claims to land in the State of Louisiana and Territory of Arkansas. This will be submitted to you at the proper time for the consideration of the Senate.

I have the honor to be, with great respect, your obedient servant,

LEWIS CASS.

The PRESIDENT of the United States.

List of documents accompanying the report of the Secretary of War.

No. 1.

REPORT OF THE MAJOR GENERAL OF THE ARMY.

HEADQUARTERS OF THE ARMY, *Washington, December, 1835.*

SIR: In compliance with the instructions contained in your letter of the 4th of September, I have the honor to submit herewith the under-mentioned statements and returns:

A report showing the organization of the army, and its force and distribution, marked A.

A general return of the army, marked B.

Distribution of the troops in the eastern department, marked C.

Distribution of the troops in the western department, marked D.

Statement showing the number of recruits enlisted in the army from the 1st of January to the 30th of September, 1835, together with the amount of recruiting funds advanced to officers of the army, and accounted for by them, for the same period, marked E.

Inspectors General Wool and Croghan are engaged in inspecting the troops—the former, those along the coast as far as New Orleans, inclusive, and the latter, those on the frontiers beyond the Mississippi.

The reports which have been received represent the army in a respectable condition as respects their police and general discipline, and as improved in tactics as their dispersed condition will allow. The supplies are regularly received and of good quality.

The dragoons, divided into three squadrons, have made tours during the past season through almost the whole of the country west of the Mississippi below the 44th degree of north latitude; and there is no doubt that their presence has had the effect of keeping the Indians quiet, and of preventing those depredations and hostilities which, before the raising of this regiment, had so frequently occurred on the frontiers. This corps has been found well adapted to the service on which it has been employed, and it is, I am happy to say, in an improving condition. The arms are found to fulfil the expectations entertained of them, and with the adoption of some modifications of the equipments recommended by Colonel Dodge and other field officers, the dragoons may be regarded as a very efficient corps, and a valuable acquisition to the military establishment.

Respectfully submitted.

ALEX. MACOMB, *Major General, Commanding in Chief.*

Hon. LEWIS CASS, *Secretary of War.*

E.

ADJUTANT GENERAL'S OFFICE, *Washington, November 30, 1835.*

Statement showing the whole number of recruits enlisted in the army, from the 1st of January to the 30th of September, 1835.

No. 2.

REPORT OF THE QUARTERMASTER GENERAL.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, November 6, 1835.*

SIR: In obedience to your order of the 4th of September, I have the honor to submit a report of the operations of the department confided to my administration for the first, second, and third quarters of the present year, to which I have added that portion of the operations of the last year not embraced in my report of the 22d of November, 1834.

The balance remaining to be accounted for by the several officers of the department, at the date of that report, amounted to..... \$97,956 99

To which is to be added—

1st. Remittances, viz:	
In the 4th quarter of 1834.....	\$307,860 80
In the 1st quarter of 1835.....	178,956 74
In the 2d quarter of 1835.....	202,375 00
In the 3d quarter of 1835.....	169,475 00
	\$858,667 54

In small sums during the year from other departments, not on requisitions from this office, but accounted for through it..... 2,972 94

2d. Proceeds of the sales of public property, either unfit for service or no longer required for public use; and rents received for public lands and buildings not required for military purposes.....	\$7, 993 91	\$869, 634 39
Making the total to be accounted for.....		967, 591 38
Of which there has been accounted for—		
1st. By disbursements, viz:		
In the second and third quarters of 1834, not included in the last report, the accounts not having been received at its date...	\$7, 665 22	
In the 4th quarter of 1834.....	293, 276 81	
In the 1st quarter of 1835.....	143, 302 85	
In the 2d quarter of 1835.....	208, 615 40	
In the 3d quarter of 1835.....	144, 074 47	
	796, 934 25	
2d. By deposits to the credit of the Treasurer of the United States, and warrants returned to the treasury.....	8, 530 97	
Total accounted for.....		805, 465 22
Leaving a balance in the hands of the officers of the department, to be accounted for, of...		162, 126 16

The report being made sixteen days earlier in the season this year than last year, the accounts of eight officers have not yet reached the office; when received, they will probably reduce the balance reported about thirty-six thousand dollars. The remainder is distributed among more than fifty officers at the various posts, and connected with the several public works directed by the department throughout the Union; all of which is applicable to the service for the present quarter, and I have no doubt will be promptly accounted for.

The accountability for the property under the administration of the department is as prompt as heretofore.

The balances remaining in the treasury on account of the Quartermaster's department proper, and for the transportation of troops and supplies, and for the travelling allowance to officers, will be sufficient for all demands against them for the remainder of the year.

The appropriation for the transportation of ordnance has been found entirely inadequate. I have been obliged to increase that item to thirty thousand dollars; and even that sum, I apprehend, will fall short of the demands of the service.

Of the works under the direction of the department, the barracks at New Orleans have been in rapid progress, and it is believed will be completed in the course of the ensuing winter without a further appropriation.

The hospital at Green Bay has been finished, and the barracks, it is believed, will be completed in the course of the winter.

The barracks and other buildings at Fort Gibson are not worth repairing. The sum which I asked at the first session of the last Congress would have put them in such repair as to have afforded comfortable accommodations for the troops for ten years. The sum granted was of no manner of use; and if the troops are to remain there new barracks must be erected. The position is, in a military point of view, by far the most important on the whole Indian frontier; and a permanent work, with accommodations for twelve companies, should be erected there as soon as practicable. I have estimated for fifty thousand dollars to commence the work and carry it on during the ensuing season; at least a hundred thousand dollars will be required to complete it.

The works at Savannah and Fort Severn have been in rapid progress during the season; and extensive repairs have, during the same period, been made at Baton Rouge. The expenditures on account of those works have been made from the appropriation for the Quartermaster's department. When my estimates for last year were in the course of preparation, it was intimated to me that if the appropriation for the department would bear the expenditures necessary to complete those works, and the barracks at Key West, that no specific estimates for them would be expected. I reported to you that the funds at the disposal of the department would be ample, and on my recommendation you authorized their application to those objects. The Third Auditor of the treasury has, however, suspended the accounts of the officers who have made the disbursements, as he says, for the want of appropriations. If the matter should be thought to require the intervention of Congress, I respectfully ask that application be made to that body in behalf of the officers whose accounts have been suspended.

A company of artillery has been stationed at Washington for the protection of the arsenal; if they are to remain, and a prudent regard to the public interests would forbid their removal, barracks will be required for their accommodation, for which I respectfully ask that an appropriation be made. The penitentiary is so situated as to command the approach by land to the arsenal; and in the event of the convicts succeeding in obtaining the mastery over their keepers, they might seize the arsenal, and by holding the penitentiary at the same time, prevent any succour from reaching it from the city. Either the convicts should be removed, or the arsenal should no longer be occupied as the place for the deposit of arms and munitions; the better course, perhaps, under existing circumstances, would be to convert the penitentiary into barracks, and erect a building for the convicts in a more suitable position.

A property adjoining Fort McHenry, near Baltimore, which is now rented by the public for the accommodation of the garrison, will be sold in February next, under a decree of the chancellor. Regarding Fort McHenry even as a secondary work, according to the classification made by the Board of Engineers, the United States should own the property referred to; I therefore respectfully ask that authority be obtained from Congress to make the purchase. No appropriation will be required, as the necessary sum may be spared from the Quartermaster's department.

Operations were commenced on the road authorized from Green Bay to Prairie du Chien, in Michigan, early in the season. The western section of the road, under the superintendance of Colonel Z. Taylor, had been finished on the 1st of August. At the date of the last reports, the troops were employed on the eastern section; but it is feared they will not be able to complete it during the present year.

The route of a road has been surveyed and marked from Saganaw to Mackinac, a distance of one

hundred and eighty-eight miles. Whether this communication be considered in relation to the transportation of the mail, the military defence of the frontier, or in its effect upon the sale of the public lands, it is one of the most important works upon which the government is engaged. I have estimated for fifteen thousand five hundred dollars to commence the operations, and to carry them on during the next year.

The road from Strong's, near the St. Francis river, to Batesville, in Arkansas, has been located and surveyed, and will be opened, it is believed, as far as the appropriation will admit, in the course of the winter; a further appropriation will be required.

That part of the road from Memphis to Little Rock, under the direction of this department, is in progress.

The road from Fort Smith to Jackson, in Lawrence county, in Arkansas, has been located and surveyed; and the officer in charge of it has a party at work on it. It will probably be finished this fall, as far as the appropriation will admit; a further appropriation will be necessary.

The road from Helena to the mouth of Cache river has been located and surveyed, and the officer in charge of it has a party engaged in opening it.

Orders have been given to commence operations on the route of a road directed by an act of the last Congress to be opened from the southern boundary of the State of Missouri, by Jackson, Little Rock, and Washington, to the town of Fulton, on the north bank of Red river.

On the road from St. Augustine to Tallahassee, in Florida, operations were commenced on the 20th of July, and at the last report the work was in rapid progress. An additional appropriation will be required.

On the road from Pensacola to Tallahassee operations were commenced on the 1st of July, and the work will probably be completed by means of the appropriation made at the last session of Congress, from the latter place to the Choctawatchee, where it connects with the steamboat line on Santa Rosa's sound.

The work on the road from the head of Pensacola bay, by Pittman's ferry to Webbville, in Florida, was commenced on the 7th of April last. A further appropriation of two thousand dollars will be required to complete it and to repair the road from Pensacola to the head of the bay.

There is a balance of about six hundred dollars of the appropriation for the military road in the State of Maine, which the authorities of the State desire to receive for the purpose of expending it in repairs upon the road. I submit the subject with a view of obtaining the sanction of Congress to the transfer should the Secretary of War approve of the measure.

The work for the improvement of the Escambia river was recommenced on the 25th of July, and at the last report from the officer superintending it the river had been cleared forty-one miles; the present appropriation will carry the improvements about twenty-one miles further; an appropriation of five thousand five hundred dollars will be required to continue the work next season.

The improvement of the Chipola river had not been commenced on the 26th of September, the date of the last report, in consequence of the water having, up to that time, been too high to admit of a satisfactory examination of the channel. As much as possible will be accomplished the present season, but an additional appropriation of four thousand dollars will be required to complete the work; the distance to be improved is about one hundred and twenty-five miles.

The officer charged with the improvement of the Ocklawaha had made arrangements at the last report to commence the work on that river, which will be carried on with the utmost vigor until completed; it is believed the present appropriation will be sufficient.

The course of observations commenced in November last at the Delaware breakwater have been continued during the present season; and though portions of the harbor are gradually filling with mud and sand, no doubt remains of the great importance of the work as a commercial harbor.

The labors were resumed on the eastern end of the breakwater in July, and the operations have been limited to raising that part of the work, so as to enable navigators to avoid running their vessels on it at high water. 11,404 tons of stone have been deposited. A large balance of the appropriation remains unexpended, the greater part of which will be applicable to the service of the next year. It is proposed that the examination of the work by a board of engineers, for the purpose of determining whether any change in the form of the harbor be expedient, be deferred until March or April, in order to afford us the advantage of observing the effect of the storms and currents upon the exterior of the work, as well as upon the shoals forming within, during the ensuing winter. I have presented an estimate for one hundred thousand dollars, which, with the balance that will remain after closing the business of the present year, will be as much as can be advantageously used next year.

It becomes my duty to those associated with me in this office to ask the attention of the Secretary of War to the entire inadequacy of their compensation. The principal clerk receives twelve hundred dollars a year; the second clerk nine hundred and fifty; the third eight hundred and forty; and two sergeants receive, in addition to their pay in the army, each four hundred and forty-five dollars and twenty-five cents. The great disbursing departments of the army are the quartermaster's, the paymaster's, the engineer, the subsistence, and the ordnance departments. The principal clerk in the Paymaster General's office receives seventeen hundred dollars, and two other clerks each eleven hundred dollars a year; the principal clerk in the office of the commissary general of subsistence receives sixteen hundred dollars, the second clerk twelve hundred dollars, and the third clerk a thousand dollars a year. There is nothing in the nature of the duties performed by the gentlemen of the two offices last named to justify the distinction made between them and the clerks in this office; the latter perform duties as important and laborious, and which require as much intelligence, time, and talent as the former; and on principles of strict justice they should have equal compensation. The business of this office is never allowed to fall back on the plea that the force attached to it is not sufficient to keep it up. If the gentlemen of the office be unable to dispose of it in the hours usually devoted to official labor in the public offices, they are required to work at other hours, and are often employed until late at night; and often at times when those who receive much greater compensation are at their homes, or attending to their private affairs. I respectfully ask that the Secretary of War do them the justice to place their case before Congress.

And I have the honor to be, with the most respectful consideration, his most obedient servant,
 TH. S. JESUP, Major General and Quartermaster General.

HON. LEWIS CASS, Secretary of War, Washington City.

No. 3.

REPORT OF THE COMMISSARY GENERAL OF SUBSISTENCE.

OFFICE OF THE COMMISSARY GENERAL OF SUBSISTENCE, *Washington, November 18, 1835.*

SIR: In obedience to your instructions of 4th September, ultimo, I have the honor to present a statement of the moneys remitted and charged to contractors, and to the disbursing officers of the commissariat, in the 1st, 2d, and 3d quarters of the year, together with the balances in the hands of the latter on the 31st of December, 1834, amounting to..... \$375, 354 08
To which is to be added the balances due them on the settlement of their accounts..... 313 61

aggregating..... 375, 667 69
The amount accounted for during the same period, is..... 323, 035 17

Leaving a balance of..... 52, 632 52

From which is to be deducted—

This sum charged to contractors as the difference in price of stores purchased to supply deficiencies arising from their failures..... \$1, 761 70

This sum expended on account of Quartermaster's department, not brought to the credit of the officers on account of subsistence..... 2, 000 00

This sum due by assistant commissaries at the period of their decease:

Lieutenant Walter S. Chandler..... \$43 10

Lieutenant D. P. Manning..... 71 72

Lieutenant Charles Pettigru..... 145 07

259 89

And this sum remitted late in 3d, for expenditures of the 4th quarter..... 3, 750 00

7, 771 59

leaving..... 44, 860 93
actually in possession of the assistant and acting assistant commissaries, applicable to the expenditures of the 4th quarter of the year.

Of one hundred and sixteen officers disbursing the public money on account of subsistence, for the period embraced in this statement, the accounts of four only were not received at its completion. One has rendered his account since; and the remaining three are so remote that time has not been afforded for their reception; it is believed, however, from the nature of their receipts and expenditures, that had they reached the department the statement would not have been materially affected; no doubt they will shortly reach the office, and every cent will be strictly accounted for in the 4th quarter of the year.

The amount due by Lieutenant Chandler, \$43 10, was received by him from his predecessor but a short time previous to embarking at Fort Morgan for Mobile, and was intended to subsist his command in the boat, which, on its return from the latter to the former place, was unfortunately capsized, and all but one man perished; and although the body of Lieutenant Chandler was subsequently found, yet no funds were on his person; the presumption is, therefore, that the major part was expended during his absence in subsisting his command; it is due to the memory of the deceased to state that in all his previous transactions with the department his accounts were rendered with the greatest promptitude.

It is believed that sufficient pay is due Lieutenant Manning to cover the \$71 72 due by him

Of the \$145 07 due by Lieutenant Pettigru, \$100 were remitted on the 8th of August last, and have not been acknowledged by him; the inference is, that it was not received; upon the treasurer's warrant for that sum reaching this office it will be cancelled, and the amount passed to his credit; the \$45 07 are suspended vouchers, forwarded him on the settlement of former accounts for explanation, these can also, upon their reception here, be now admitted to his credit.

It is nothing more than justice to Lieutenants Manning and Pettigru to remark, that from the prompt manner in which all their previous accounts were rendered it is believed that, had they survived, every cent in their possession would have been honorably and satisfactorily accounted for.

Very respectfully, your most obedient servant,

GEO. GIBSON, *Commissary General of Subsistence.*

Hon. LEWIS CASS, *Secretary of War.*

Statement exhibiting the moneys remitted to contractors from the 1st of January to the 30th of September, 1835; the moneys paid to them by agents of the department; and the sums charged to them on account of failures, and the amounts accounted for by them; and the balances in the hands of the disbursing officers of the department on the 31st of December, 1834; the remittances made them in the first, second, and third quarters of 1835; the sums charged to them as transfers from one office to another; and to officers at the frontier posts sale of surplus provisions, empty barrels, boxes, &c.; and the amounts accounted for by them during the same period, together with the balances in their possession at the expiration of the third quarter of the year.

No. 4.

REPORT OF THE PAYMASTER GENERAL.

PAYMASTER GENERAL'S OFFICE, *Washington City, November 30, 1835.*

SIR: I have the honor herewith to submit a report of the transactions of the pay department for the year ending the 30th of September, 1835.

It will be seen that the balances in the hands of paymasters, and the sums received by them from the treasury during the fiscal year, amount to one million five hundred and ninety-six thousand five hundred and eighty-five dollars and twenty-two cents; all of which they have accounted for, except \$54,942 80. A part of this sum is charged to the late Paymaster Wright, being the balance reported against him by the Auditor. His administrators claim credits from the United States, on account of rejected vouchers and disallowances, to a greater amount. Whatever balance may be finally adjudged to be due will be paid without loss. The remainder to be accounted for was advanced for the payment of the troops on Red river; the paymaster received it in October last, and has not yet had time to disburse it and render his accounts; they will, no doubt, be received before the close of the year.

The troops have been paid to as late periods this year as they generally are when the annual report is made.

It is now fifteen years since the United States sustained any loss by the transactions of this department, in which time nineteen and a half millions of dollars have been disbursed in small sums; the accountability may, therefore, be considered as perfect as it can well be made, and I have nothing to ask for or recommend on that subject; but, in relation to frequent payments, it is my duty to repeat what I have before stated, that, with the number of paymasters now authorized, it is impossible for the department to have the troops paid as often as the law contemplates and the interest of the service requires.

When the army was last reduced, fourteen paymasters were retained and found necessary to pay it according to the requirements of the law. Since then their duties have been increasing, and are now at least one-third greater than they were in 1821, in consequence of the additional number of troops, the extension and increase of military posts, and the greater amount of funds to be disbursed. Under such circumstances, I again solicit you to recommend that provision be made by law for the appointment of three additional paymasters.

Respectfully, your obedient servant,

N. TOWSON, *Paymaster General.*

Hon. LEWIS CASS, *Secretary of War.*

A.—Statement of moneys drawn from the appropriations for the pay department and remitted to the disbursing officers on account of payments for the fourth quarter of 1834 and the first three quarters of 1835; the amount unexpended and forming part of their estimates for the fourth quarter of 1835; the balances to be accounted for; the periods to which the troops have been paid, and accounts rendered.

N. TOWSON, Paymaster General.

PAYMASTER GENERAL'S OFFICE, November 29, 1835.

No. 5.

REPORT OF THE COMMISSARY GENERAL OF PURCHASES.

COMMISSARY GENERAL'S OFFICE, Philadelphia, October 24, 1835.

Sir: In obedience to instructions contained in your letter of the 6th instant, I have prepared, and have now the honor of enclosing, my moneyed estimates for 1836, marked A and B, as follows, viz:

A. For clothing, camp equipage, &c., for one year ending 31st October, 1836.....	\$202, 982 00
B. For the expenses of the Commissary General's office during the year 1836.....	6, 250 00
Total.....	<u>209, 232 00</u>

I likewise enclose four statements, numbered 1, 2, 3, and 4, prepared in obedience to your order, viz:
No. 1. Of moneys drawn from the appropriation for the purchasing department during the first three quarters of the year 1835.

No. 2. Of moneys received and disbursed during the first three quarters of the year 1835 on account of the purchasing department.

No. 3. Comparative statement of the cost of clothing, &c., for the United States army during the years 1834, 1835, and 1836.

No. 4. Statement of the cost of clothing, &c., for the United States army during the year 1836.

I have deducted \$40,000 from the gross amount of the moneyed estimate A, for clothing, &c., that may remain on hand after the issues for this year have been completed, which is as much as can be deducted with safety.

The balance remaining in the treasury undrawn, \$14,438 64, will be required to enable me to settle all accounts to the end of the year 1835, and to enable me to make up clothing during the approaching winter, so as to be ready for an early spring issue. I have therefore to request this money may be reserved for the operations of this department, as the whole will be required.

These statements will, I hope, be entirely satisfactory. The duplicates will be forwarded by the mail of the 26th.

I have the honor to be, sir, with great respect, your most obedient servant,

C. IRVINE, *Commissary General of Purchases.*

Hon. LEWIS CASS, *Secretary of War.*

No. 6.

REPORT OF THE SURGEON GENERAL.

SURGEON GENERAL'S OFFICE, November 21, 1835.

SIR: In compliance with your instructions, I have to report that the amount advanced on account of the medical department of the army during the first three quarters of the present year was \$14,500; of which \$10,811 have been expended, and for which accounts have been rendered and settled. The amount

paid during the same period, by warrants on the treasury, for claims previously presented and admitted, was \$13,770.

The annual supplies for the several hospitals were transmitted in due season, and received in good order, and, with other property under the charge of the officers of the department, have been fully and satisfactorily accounted for by the returns of the surgeons, which also show the hospitals to be amply supplied in every respect; and although the allowances, as established by existing regulations, have been materially increased and improved, and are of the best quality the market affords, the expenses of the department on this account have, in consequence of the system of responsibility adopted, both in relation to supply and expenditure, been essentially less than heretofore. The average cost for supplies during the last two years has been \$2 56 per man, and the average from 1819 to 1832 was \$2 49 per man; while that of 1817 and 1818 was \$6 19, and that of 1810 and 1811 was \$4 50 per man; making a difference in favor of the present establishment of \$14,000 per annum over that of 1810, and of \$23,500 per annum over that of 1815.

In reply to a remark contained in a recent report of the board of visitors at West Point, it is deemed proper to state that from the returns and the reports of the medical officers, as well as from a recent inspection, the hospital at that place appears to be amply furnished, not only with all that this department is authorized to furnish, but with many additional articles which do not come strictly within its estimates. The appropriations for the army and for the Military Academy have always been entirely distinct; and if it is thought advisable, in compliance with the intimation of the board of visitors, to establish allowances for that institution, which has heretofore been furnished from the supplies of the army, beyond what is either authorized or required at the military posts, it is respectfully suggested that a special estimate be hereafter made for that purpose.

The whole number of deaths reported in hospitals during the first three quarters of the year was but 108, or a fraction over one and a half per cent. in the aggregate of the army. Of these 25 occurred at Jefferson Barracks, 19 at Fort Gibson, 6 at the dragoon encampment near Fort Gibson, 6 at Fort Jesup, 5 at Fort Armstrong, 5 at the Bay of St. Louis, and 42 at the other posts; of which 21 were from consumption, 16 from remittent and intermittent fever, 11 from intemperance, 7 from cholera, and 53 from other causes.

The law graduating the pay of the surgeons and assistant surgeons according to length of service, and requiring an examination by a medical board previous to appointment or promotion, is believed to have been of essential advantage to the army by securing to it the talent and the professional knowledge which are absolutely necessary to the performance of the important duties that devolve upon an officer of the medical department as soon as he enters the service. Of 121 applicants who had been recommended as qualified for appointment, and who were authorized to present themselves for examination, 50 have failed to attend, and of the remainder but 44, or somewhat over one-third of the whole number have been found qualified for the commission applied for. The army surgeon is liable at any moment to be called in to decide in the most critical cases remote from all professional advice and assistance, and should not only be well grounded in the elementary branches of his profession but be sufficiently versed in the details of practice to prepare him for all its responsible contingencies the moment he reports himself for duty. The medical board have therefore been instructed to make a full and accurate examination of every candidate in anatomy and physiology, surgical anatomy and surgery, theory and practice of medicine, materia medica and pharmacy, chemistry, obstetrics, and forensic medicine; to report the positive merit of each candidate in the respective branches and their relative merit on the whole examination; agreeably to which they are appointed and take rank in the department.

I have respectfully to call the attention of the department to the condition of the hospitals at the several military posts, many of which are entirely destitute of suitable accommodations for the sick. A large portion of the buildings appropriated to this purpose have been erected a long time and were built of perishable materials, and in a hasty manner, to meet the exigencies of the occasion; while at most of the works recently completed no provision is made for the sick, who are necessarily placed in damp casemates, or in temporary buildings entirely unfit to protect them from the inclemencies of the weather or to preserve the property under the charge of the medical officers.

Agreeably to instructions, the medical board recently made a special report on the condition of the hospitals at eighteen posts visited by them, and of this number but three were found to be well built and of good materials, and the internal arrangement of these is essentially defective. Hospitals of the first class are now required at four, of the second class at one, and of the third class at three of them. Those heretofore erected have afforded very imperfect accommodations in proportion to the expense incurred. It is therefore proposed that they be hereafter built on plans to be furnished by the department, adapted to the size of the command and so constructed as to admit of enlargement and to afford the necessary wards and offices at the least additional expense.

An estimate has been furnished of the amount believed to be required for this purpose for the ensuing year, and a special report will be made designating the several posts at which new hospitals now are or will shortly be required, and those where additions, alterations, or repairs only are necessary.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. LEWIS CASS, *Secretary of War.*

No. 7.

REPORT FROM THE ENGINEER DEPARTMENT.

ENGINEER DEPARTMENT, *November 15, 1835.*

SIR: In compliance with your instructions, I have the honor to submit the following report, relating to the operations of this department during the year ending on the 30th of September last. It is accompanied by three tabular statements, marked A, B, and C. The first two relate to its fiscal concerns, and the last exhibits the works projected by the board of engineers which have not been commenced, and an estimate of their cost.

FORTIFICATIONS.

In consequence of no appropriation having been made for this branch of service at the last session of Congress, the operations at the several works have been limited to the application of balances of former appropriations, and contracted to the degree necessary for placing in security and in a state of preservation those parts already commenced rather than in continuing the constructions then in progress. This obliged me to change the location of some of the officers, to dispense with the services of artisans, mechanics, and laborers, whose experience and skill it will be difficult if not impossible to replace, and to lay up and dispose of materials and machinery.

A recommencement of operations will be attended with embarrassment and delay, and imposes upon me the necessity of presenting large estimates, which a vigorous prosecution of the different works now calls for to place them in the situation they have lost.

I also beg leave to request that the propriety of a speedy action upon these estimate may be represented to Congress, that advantage may be taken of the coming winter to enter into timely preparations.

Fort Independence, Boston harbor.—The funds available for this work have been applied during the past season in procuring stone for the face of the scarp wall, and 36,431 superficial feet of the 55,000 required for the modified plan have been prepared.

Fort Warren, Boston harbor.—As soon as the preparatory measures for commencing the masonry of this fort, detailed in my report of last year, were completed, as large a force of masons as could be procured were employed on its construction.

It is anticipated that by the close of operations this year from 4,000 to 5,000 cubic yards of masonry will have been laid and about two-fifths of the entire excavations and embankments have been effected.

Fort Adams, Narraganset Roads, Rhode Island.—Nothing has been done at this work since last March. The balance of the funds available last fall were employed very efficiently in closing operations for the winter.

In consequence of no appropriation being made for a recommencement in the spring, it was found necessary to dispose of the horses and oxen, and make such other dispositions as practicable for the preservation of the works.

Fort Schuyler, Throg's Neck, East river, New York.—It was hoped, from the ample preparations made last year, and the funds available for their application, that the construction of this fort would have been prosecuted the present year with much vigor. But though materials and facilities of every description have been in waiting, it has been impossible to procure a sufficient force to carry on the works with the progress that was desired. No exertion has been spared to facilitate the operations, either by letting parts on contract or by hired labor; and unavailing efforts have been made to collect the necessary force in Boston, Newport, Connecticut, and the western part of New York. The foundations of the sea wall have been laid from its commencement at the southern redoubt to its extremity at the northern. The superstructure of about one-third of this extent has been built to its full height, and that of the remainder to about one-third; the most difficult parts of the foundation of other parts of the work have also been laid.

A large crane, a number of trucks, scows, &c., have been added to the facilities prepared last year, and a railroad at the quarry at Harseneck is now constructing.

It is hoped that much work may still be done the remainder of the season.

Fort Columbus and Castle William, Governor's island, New York.—The repairs of these works have been prosecuted with as much rapidity as the force at the command of the officer in charge would permit; should he be able to increase it sufficiently, the former fort will be entirely completed this fall, except the laying some of the gun traverses, which must be postponed until funds for that purpose can be obtained.

The measures deemed necessary for repairing the latter work have been attended with difficulty and delay. The exterior wall of the battery has been confined, by tension braces, to the interior, to prevent its inclination outwards from the weight of the arches of the casemates above. Arrangements have been made for laying the platforms of the second tier of guns, and the repairs of the roofs have been commenced. Nothing has yet been done to the south battery, except to remove the old walls furthest from the parade, that supported the platforms, and, with the materials thus procured, to build the foundations of the traverses. The wall next the parade has been left as an interior revetment of the rampart.

The constant employment afforded to mechanics and laborers of every description in the city of New York renders it very difficult to procure their services on the island, which has operated very unfavorably to these works the past season.

Fort Delaware, Delaware river.—The walls of the old fort have been razed, and the materials applied to strengthening the dikes around the island. The quarters of laborers, overseers, master workmen, and superintendent are completed; as also workshops, storehouses, lime sheds, and stables; the canals and necessary roads have been constructed, and the drainage of the whole island rendered perfect. The wharves have been repaired, several thousand bricks cleaned for future use, and the cranes necessary for the reception of stone completed. A supply of excellent building stone, a large quantity of piles, and square timber for the grillage and foundations of the new work have been received. The hydraulic machinery, with a steam-engine for propelling it, together with three pile engines, have been constructed; the position to be occupied by the new work has been examined by boring, and the nature of the soil ascertained.

All the arrangements were perfected at the close of last year for receiving materials in large quantities, and for commencing and rapidly progressing with the foundations of the fort in the spring; but it then became necessary to suspend the work, and confine operations to the receipt of such materials as had been contracted for, keeping the laborers employed when not otherwise engaged in tearing up the old foundations, and excavating one front of the new work.

Fort Calhoun, Hampton Roads, Virginia.—As contemplated in my last report, the balance of the stone required for the formation of the mole has been received, and deposited over the foundations of the walls of the fort, so that there is now acting along their whole extent a greater weight, by upwards of 20,000 tons, than is estimated will be brought upon them when the fort is completed and garrisoned.

Though an accession of weight continues to cause subsidence, it is in a continued decreasing ratio, and should there be no evidence of a contrary nature by next spring, it is proposed to resume the construction of the walls, for which purpose an estimate is submitted.

Fort Macon, Beaufort, North Carolina.—As announced in my last report, this fort has been completed, and is now garrisoned.

Fort Caswell, Oak island, North Carolina.—This work was reported to you last year to be in readiness to receive a garrison. Since that time the department has been informed that in the storms so frequent on that coast inroads have been made in the dikes by the sea, and a breach finally created, which even threatens more damage than has yet taken place. The walls of the fort have also had some motion since they were erected, causing injuries to the arches of the caponnières and crenated galleries, and give indication of insufficient stability to resist the weight tending to their overthrow. The funds originally available were not sufficient to construct the breast height walls, the parapets, furnaces, &c., which are necessary for its completion. An estimate to remedy these defects for the construction of the parts mentioned, and for the security of the site, is accordingly submitted for consideration.

Fortifications in Charleston harbor, South Carolina.—Operations in this harbor have consisted in applying the balance of the appropriation of 1834 to the prosecution of the plan for protecting the site of Fort Moultrie. This plan, so far as tested, has answered the desired end, and a large accumulation of sand has taken place on the shore before exposed to the abrading action of the sea.

For want of funds the operations were abruptly arrested last March, the works brought to as favorable a close as circumstances would permit, and the officer charged with their superintendence otherwise disposed of.

The estimate for next year contemplates the renewal of the construction of Fort Sumter, and the prosecution of the plan for protecting Sullivan's island.

Fort Pulaski, Cockspar island, Georgia.—On September 30, 1834, the piling and construction of the grillage for the foundation of this work was completed, and the masonry commenced. Since that time the available funds have been applied in laying 5,165 cubic yards of masonry; to the completion of all the counter arches, and cross walls of the rampart, to a height of seven feet above the grillage, and to the completion generally of the counter arches of communication, and the piers, scarp and rear walls, and counterforts of the north, northeast, and southeast fronts to a height of more than twelve feet above the grillage. The work is represented by the local engineer to be in a favorable condition for a vigorous recommencement of operations so soon as further means are provided.

Fort Marion, St. Augustine, Florida.—Nothing has been done at this work the past year for want of funds.

Fort Pickens, Pensacola harbor, Florida.—This fort was completed in October last, and occupied by a garrison.

It has been since necessary to give increased dimensions to the scarp walls of the two faces of the northeast bastions, to insure their permanency against the immense pressure of the sand ramparts. It is satisfactory to state that all parts of the walls supporting these heavy embankments are now in excellent condition, as proved by the severe test to which they have been subjected from the unusual and heavy rains of the past summer.

For the causes alluded to in my last report, a further appropriation is still necessary for the final completion of this work, an estimate for which is accordingly submitted.

Fort on Foster's bank, Florida.—At the date of my last report the construction of the platform foundations of this work was in progress, and owing to the exposed position of the site, required great labor and activity to lay the masonry in a secure and proper manner. The funds arising from the appropriation of 1834 were at this time exhausted, but, seeing the great injury, if not complete destruction, that would result to the works should they be suspended at that stage of their progress, it was determined by Captain Chase, the local engineer, to continue them on his own credit, in anticipation of the appropriation of 1835. When he became aware of the non-appropriation for fortifications the works had been in progress nearly four months after the available means had been exhausted. The safety of the foundations had been secured, and the whole structure raised to five feet above high-water level. But, under previous appropriations, a large quantity of materials had been collected, and were then deposited on the narrow strip of land composing a part of Foster's island, which were necessarily much exposed to injury, and, indeed, to total loss, from the changes produced by storms on the recently formed island. It was therefore very desirable they should be used in the walls of the work as rapidly as possible, and Mr. Strong, the contractor, did not hesitate to proceed with the construction on his own responsibility, relying upon the appropriation of 1836 to remunerate him for his services. The work is now raised two feet above the tops of the lower tier of embrasures, and all the piers of casemates are raised ten feet above the parade. In consequence of these arrangements, by which great loss has been saved to the United States, a large amount of arrearages has accrued against the fort, which is embraced in the estimate for 1836. This estimate contemplates the completion of the work by the end of next June.

Fort Morgan, Mobile Point, Alabama.—Arrangements were made, in obedience to your instructions, to fit up thirteen casemates at this fort for officers' quarters, store and guard rooms; the first of these are nearly completed, and the balance of the funds, as far as they go, will be applied to the others.

Fort Livingston, Grand Terre, Louisiana.—Nothing has been done at this work, for the reasons mentioned in my last report.

The expenditures hitherto made have been principally for the construction of temporary buildings. A person is placed on the island for the purpose of taking care of the materials and houses; and one laborer, under his direction, is engaged in cutting the ditches that are considered beneficial to future operations.

Contingencies of fortifications.—The funds available under this head have been applied to repairs of Fort McHenry, to Fort Macon, to construction of experimental battery at the Washington arsenal, to fitting up magazines of forts on the Gulf of Mexico, constructing a fence at Fort Hamilton, to repairs of Fort Jackson, survey of Provincetown harbor, and contingencies of Engineer department.

The frequent calls made upon the department for repairs to fortifications, which are essential to their preservation, security, and efficiency, render it necessary that a larger sum than usual be placed at its disposal for this purpose. This will explain to you the cause why the item under this head in the estimate for 1836 is larger than customary.

I beg leave respectfully to represent at this place that most of the works now in progress will be completed in the course of a few years, and that a regard to economy and timely preparation obliges me to call your attention to the subject of continuing the system of contemplated defence along the coast; I therefore respectfully suggest that a commencement of the works for the defence of Portland, Me., Portsmouth, N. H., Provincetown harbor and New Bedford, Mass., the debouche of the Chesapeake and Delaware canal, Delaware river, Baltimore, Md., and that intended to complete the defences of Pensacola harbor and navy yard, be taken into consideration; an estimate for which is submitted.

The influence which these positions exert upon our internal defence and intercourse is well known to you, and need no comment from me, at this time, for the preference given them over others.

HARBORS AND RIVERS.

Chicago harbor, Illinois.—Notwithstanding the difficulties attendant upon procuring supplies of materials and workmen in a country whose whole energies are necessarily exerted for the accommodation of a numerous and rapidly-growing population, the works at this place have been successfully prosecuted, and to an extent commensurate with the available means. The piers forming the artificial harbor have been extended about five hundred feet, and enclose a channel of two hundred feet breadth, varying from three to seven feet deep, ready for the operations of a dredging machine, by which a free passage will be opened into the channel of the river. The north pier now extends into the lake 1,260 feet, and to twelve feet water; the south seven hundred feet, and to seven feet water. In their present incomplete state great protection has already been afforded to the increasing commerce of the place, and as many as five schooners have at one time discharged their cargoes under their shelter.

Since the opening of navigation to the 30th of September upwards of two hundred vessels have arrived at this port, showing that its speedy completion, which is anticipated during the next year, should the estimate now asked for be granted, will confer great advantages not only on Chicago and its immediate neighborhood, but on the whole country to the west and south, as far as the shores of the Mississippi.

Harbors on the south shore of Lake Erie.—The condition and progress of these works are set forth in detail in the reports of the general superintendents; and as their importance to the commerce of the whole western country is universally felt, they are herewith annexed, marked D and E, to which I beg leave to refer you.

Genesee river and Big Sodus bay, Lake Ontario, N. Y.—The extent to which the important improvements at these places have been prosecuted during the last fiscal year is stated by the immediate superintendent in his report to this office, which is appended and marked F, to which I beg leave to refer, as giving a concise view of their present condition.

It is now very apparent that, to secure the continuance of the advantages of these works, the temporary piers at the first position ought to be replaced by permanent constructions; to carry which project into effect an estimate is submitted.

Oswego, Lake Ontario, N. Y.—The operations for the improvement of this harbor have been confined to the collection and proper distribution of stone for the construction of the mole and pier, and in paving the mole with large blocks of limestone. About 4,084 cords of stone have been applied to the first-mentioned objects, and 1,115 tons of limestone to the second. A sufficient quantity of stone has been deposited in the mole to render it secure the coming winter.

Monument on Steel's ledge.—On the 14th ultimo this monument was completed, except putting in the copper bolts required for the upper courses of stone.

Piers at Kennebunk, Maine.—In making preparations for carrying into effect the wishes of Congress in reference to the erection of the eastern pier at this place, it was ascertained that the appropriation was not sufficient to complete it upon the plan proposed; and as the new work would be exposed, in its unfinished state, to the action of the sea during the autumnal and winter storms, the propriety of commencing its construction was doubted. Nothing has been, therefore, done this season but to procure materials and prepare the stone for the upper courses of the work. A large quantity of fine blocks of stone are now ready, and everything is prepared for commencing operations next spring, except contracting for the masonry, which the available funds did not justify.

Merrimack river, Mass.—The pier leading from Salisbury shore to Badger's rock has been completed, and extended nearly two hundred feet into the river, terminating upon a ledge of rock one foot under water at low tide. When completed it will afford shelter and protection from the ice to three ships at a time, affording them a harbor of fifteen feet of water at low tide. The effect experienced from this pier last winter, in its then situation, was very beneficial, and the influence it has exerted in widening and straightening the channel over the Hamp sands is very great.

Though it is impossible to state at this time what may be the consequence of the public works on the bar at the mouth of the river, it is satisfactory to know that vessels drawing seventeen feet water can now, without difficulty, pass it; and it may be supposed that in time a safe refuge for vessels, during the stormy seasons, will be prepared on that part of the coast.

Provincetown harbor, Mass.—The parts of the beach at this place that are planted with grass are represented as doing well, and as giving evidence that the object in view, viz: the protection of the harbor, will be attained. Upwards of two hundred acres have been planted this season, and the estimate for next year contemplates the setting out of a similar quantity.

Plymouth beach, Mass.—Nine hundred feet of stone will have been constructed on the west side of the breakwater at this place since my last report, and 1,500 feet of brush fence, for the purpose of arresting the drifting sand. Grass, for the same object, has been set out at various points along the beach, to the extent of 1,000 feet, which, together with the general state of the beach, is represented by the agent to be in good condition.

Iyannis breakwater, Mass.—The present length of this breakwater is one thousand and fifty feet, carried to its full height, and fifty feet partially finished, which will afford considerable protection to the coasting navigation. Many difficulties to its rapid progression this season are represented by the agent to have existed, and which he has used every exertion to overcome. The preparations he has made, and which have consumed a part of the labor of this year, will facilitate the operations of the next.

Hudson river, N. Y.—In my report of last year I stated the preparatory measures that had been taken to carry into effect the wishes of Congress in reference to the improvement of this river, and the apprehension of the department lest the plan designated by Congress should prove inadequate to accomplish the object in view. An examination of the river, between the points where the principal obstructions to its navigation are found to exist, by the officer charged with its improvement, led to conclusions so different as to the realization of all the benefits anticipated by the projector of the plan, that it was deemed advisable to adopt the recommendation of this officer, and refer the whole subject to the board of engineers. The plan reported by the board, which is herewith annexed, marked G, is confirmatory of the general principles of the original plan, yet differing in some degree in carrying those principles into execution. It contemplates, first, the removal of the existing deposits; and, second, the prevention of future accumulations.

The means recommended for the accomplishment of these objects are dredging, contracting the bed of the river by employing longitudinal piers, and protecting the channel shores from the action of the current.

It was believed that by the first process a channel would be obtained adequate to all the wants of the river navigation; that the erection of piers and protection of the channel shores would preserve the channel so formed free from future obstructions.

Early preparations were made for carrying this plan into effect; and as soon as a system of operations could be matured, called for by the importance and difficulty of such an undertaking, contracts were effected for carrying on the operation of dredging, for the delivery of stone, the formation of dams, and protection of the shores of the channel, as far as the available means would authorize.

Owing to many unfavorable circumstances, these contracts have not been completed, though this great work may now be considered in full operation; and from the change that has already occurred at the principal obstruction, the happiest result may be anticipated.

Many beneficial alterations in the proposed plan will no doubt suggest themselves in the process of execution; that of substituting imperishable for perishable materials in the dams, at a great saving of cost, has already taken place.

The estimate presented for next year contemplates the removal of the principal obstructions above and below Albany.

Harbor of Newcastle, Marcus Hook, Chester, and Port Penn, Delaware river.—Concurring fully in the views of the officer charged with the improvements and repairs of these harbors, I hereto append his report, marked H, to which I respectfully call your attention, as furnishing a concise history of the operations hitherto pursued, and a statement of their present condition.

You will perceive that there is no harbor for the protection of vessels navigating the Delaware, except at Chester; that nothing can be done with the partial appropriations hitherto made, and I therefore beg leave to present to you the estimate of the superintendent.

Ocracoke inlet, North Carolina.—The report of the officer charged with the improvement of this place, showing in detail the cause and nature of the obstructions to the navigation, as well as his views for their removal, is herewith submitted for your perusal, marked I.

Cape Fear river, North Carolina.—Some interruption to the operations on this river has necessarily occurred since my last report, resulting from the death of the officer charged with its improvement.

From an inspection made under the direction of this department you will perceive the present state and condition of the works, and the measures recommended for the accomplishment of the desired end. So much of the report as pertains to this object is annexed and marked K. Concurring in the suggestions therein presented, an estimate for carrying them into effect is accordingly submitted.

Savannah river, Georgia.—The progress of the improvements on this river has not answered the expectations of the project for the year, or the anticipations contained in my last report.

It was contemplated to complete the foundation of a permanent obstruction between Hutchinson and Argyle islands, and to remove, by dredging, the shoals at the wrecks, Garden bank, and Upper Mud flat. All the preliminary arrangements for the first-mentioned object were made, materials were collected, and operations commenced, when the local engineer was made aware that, by the second article of the treaty of Beaufort, concluded in 1787, between the States of Georgia and South Carolina, no obstruction whatever should be made by the citizens of either State in the channel it was contemplated to close. A suspension of operations was therefore required by the department; the subject was referred to the United States attorneys in those States, and a consequent application to the respective governors will be made at the suitable time.

Although every exertion was made to hasten the construction of the dredge-boat, machinery, &c., for the other operations, owing to a scarcity of workmen and a breakage of a part of the machinery when first put in operation, the sickly season commenced on the river before much could be perfected, and not more than 2,800 cubic yards of sand and mud have been removed from the wrecks.

It is hoped, however, that no cause will happen to retard the operations about to be recommenced, and that their progress will be commensurate with the efforts made for their completion.

Inland Pass, between St. John's and St. Mary's, Florida.—The officer to whom was assigned the superintendence of the improvement of this pass could not spare his attention from the works on the Savannah river to make an examination of the impediments to be removed till about the first of last June.

So soon as the project submitted by him could receive the sanction of the department, measures were entered into for the construction of a dredge-boat and the necessary mud flats for clearing out the channel; and it is anticipated that the operation will be commenced by the first of next January.

Ochlochney and Apalachicola rivers, Florida.—The improvements of these rivers were brought to a close upon the completion of the operations reported to you last year.

St. Mark's river and harbor, Florida.—The obstructions in the harbor, consisting of oyster beds and mud shoals, and extending over a space of about two miles, have been removed. A canal has been cut through the natural bridge at Rockhaven, about six hundred yards long, which opens the river and swamp for scow navigation fourteen miles above the natural bridge to a point about two miles south of the St. Augustine road. The funds appropriated for these works have been expended, and the operations brought to a close.

Mobile harbor, Alabama.—The difficulties attending this improvement were stated in my last annual report. The operations under the present contractor have been prosecuted with much vigor and great success, notwithstanding the prevalence of bad weather, and occasional damage sustained by the machinery from the contact of vessels. An addition of fifty feet has been added to the pass, making at this time a clear passage of 150 feet in width and ten feet in depth, and it is anticipated that its width will be extended to 200 feet by the first of January. The application of the appropriation of 1835 will afford an additional width of 250 feet, so that the whole pass will be 150 yards wide. This is deemed sufficient for the easy entrance and passage of any vessel, and its accomplishment will prove very beneficial to the commerce of that country.

Pascagoula river, Mississippi.—As anticipated in my last report, the then existing contract for the improvement of the mouth of this river was abrogated, and a new agreement made for carrying on the operations with greater vigor.

A cut has now been made fifty-five feet wide, affording five and a half feet water at low tide, which is deemed sufficient for any vessel navigating the river. But, from the nature of the sand flat through which

the excavation is made, it is feared that the advantages which have resulted from dredging will not be of long continuance.

The present contractor has made every exertion to facilitate the work, and has encountered many difficulties from the unfavorableness of the season.

No further appropriation will be asked for.

Ohio, Mississippi, and Red rivers.—For the condition of the improvements of these rivers, I beg leave to refer you to the reports of the officers charged with their superintendence; they are appended, and marked L and N, to which are annexed the reports of the officer of this department, who inspected the works on the first from the falls to its mouth, and of the second, from St. Louis to New Orleans, (marked M.)

Arkansas river, Arkansas Territory.—In consequence of the continued engagements of the superintendent, Captain Shreve, charged with carrying on this improvement, nothing has yet been done towards the application of last year's appropriation. Arrangements have been made, however, to work one of the steam snag-boats, belonging to the Mississippi river, for two months during the ensuing winter, on the Arkansas, which it is believed will much advance the interests of its navigation.

Cumberland river.—The obstructions to the navigation of this river at the point called Devil's chute, have been removed, with the exception of about forty yards square of rock in the middle, which a rise in the river arrested.

A wing dam has been constructed at Line island from the main across the island chute; another from the foot of the first island to the head of the second, crossing the keel-boat chute; and a third from the foot of the second island to a small island below, so that the water is confined to the left shore along the whole extent of the islands.

The steamboat President, sunk in the island chute at this place, has been raised, and a number of snags, logs, roots, &c., have been cleared out of the channel.

The wing dam at the head of Harpeth shoals has been added to and strengthened, and the one at the foot of the shoal completed, and appears to answer the purpose intended.

The repair of the dam at Davis's ripple was commenced, and necessarily suspended from sickness and death among the laborers. All the snags, logs, &c., from Nashville island to Line island, have been removed, and it is anticipated that the obstructions in and near the channel, down to the mouth of the river, will be removed this fall. The estimate presented this year is to complete the contemplated improvement of this river. The report of the officer of engineers who inspected these works is appended, marked O.

LIGHT-HOUSES AND BEACON-LIGHTS.

The condition of the light-houses on the south shore of Lake Erie will be seen from the report of the officer to whom their construction is committed, marked E. Those at Genesee and Big Sodus, from report marked F.

The foundation of the light-house at Oswego has been constructed, and stone prepared for the superstructure. The funds now available will be sufficient for the tower, but not for the lantern and lamps.

Upon commencing the preparatory measures for constructing the light at Goat island, it was ascertained that the funds provided by Congress were inadequate to its completion, and it was decided that, under the laws, the work could not be commenced. The report and estimate on this subject has been referred to the proper department, as well as those in relation to Black river, Cunningham creek, and Oswego, in order that, if deemed necessary, they may be laid before Congress.

ROADS.

Roads from Detroit to Fort Gratiot, and to the mouth of Grand river, in the Territory of Michigan.—The report stating the present condition of these roads has not yet been received.

The first has been completed, though, in consequence of the balance in the treasury (without the knowledge of the department) having been carried to the surplus fund, there are some arrearages due on the road, which will require its reappropriation.

Road from Detroit to Chicago.—The appropriation of last year was applied in securing as good a road as was practicable throughout its entire length. Contracts were therefore made for constructing the worst parts of the road first. In some instances it is merely to be grubbed and rendered even and smooth; in others, to be drained and turpiked as heretofore; and those sections of the road which were tolerably good in their natural state have been omitted.

The whole length of road contracted to be constructed is twenty and a half miles, and is to be completed by the 20th of December next.

Bridges have been contracted for over Christian and Crooked creeks, which, when completed, will render that part of the road remaining to be finished at the date of my last report passable for vehicles of every description at all seasons of the year.

No part of the last appropriation could be spared for the erection of a bridge at Bertrand, over the river St. Joseph's, which will require an additional sum of \$4,000. An estimate for which is accordingly presented.

Saginaw road, Michigan Territory.—The section of road put under contract this year passes over the lowest land on the route from Detroit to Saginaw, and the available funds would only authorize ten miles of this road to be put under contract.

The road is to be opened one hundred feet wide, fifty feet of which is to be grubbed and cleared of timber, brush, &c., and where it passes over marshes and swamps is to be causewayed.

A bridge over Cass river is in a state of forwardness, and will be completed this year, as well as all the parts of the road now under construction.

Territorial road from Sheldon's to the mouth of St. Joseph's.—Contracts for opening and constructing those parts of this road which most required it were made in December last; parts of eighty-four and a half miles were put under contract, which, with one or two exceptions, are completed.

Bridges over the Kalamazoo, in two places, are constructed, as well as over some of the smaller streams on the route. The road is now generally good, and the funds last appropriated have been of great service to the public.

Territorial road from Niles to the mouth of the river St. Joseph's.—Eighteen and a half miles of this road were put under contract last November, which comprises nearly all the low land along the line.

They are now nearly finished, and will be entirely so before winter. Bridges are constructing over the small streams, but, to complete the road, a bridge is necessary across the St. Joseph's at Berrien, which will cost about the same sum as that at Bertrand.

Territorial road from Clinton to the rapids of Grand river.—Owing to the length of time occupied in locating this road, the sale of contracts for its construction did not take place till about the first of last May. Parts of twenty miles, together with two bridges over the river Raisin, one over Grand river, and seven smaller streams, were then put under contract, to be completed by the first of the present month, and it was anticipated by the superintendent would be finished by the time fixed.

The funds expended on this road will not be of much avail, unless an additional appropriation be made of \$8,000. A judicious application of this sum to those parts of the road most requiring it will make it quite passable.

Road from La Plaisance bay to the road leading from Detroit to Chicago.—The whole of this road is either completed or under contract; the contracts to be fulfilled and the road entirely finished by the 31st of December next.

Thirty-three miles, with all the bridges, culverts, side drains, &c., are now completed, and fifteen miles more, embracing the whole length, are in process of execution.

Such of the road as was made on the plan directed in 1833 is now and will continue in fine condition, and it is to be regretted that a more economical system had to be pursued, as the parts so constructed do not wear as well. This road has very essentially contributed to produce the unexampled sale of public lands within the district in which it lies, and is now one of the great thoroughfares for Michigan, Indiana, and Illinois.

Road from Port Lawrence to Adrian.—This work, originally a territorial road, has had expended on it \$9,913 08 of the \$10,000 appropriated towards its construction in 1834.

Twenty-one and a half miles have been constructed, principally through a swamp, and some labor bestowed on about four miles more; the balance of the funds will be applied on those parts most requiring it.

All the contracts heretofore made are fulfilled, which, however, does not complete the road.

Territorial road from Vistula (now Toledo) westwardly to the Indiana State line.—Of the \$10,000 appropriated by Congress for the construction of this road, \$9,446 30 have been expended.

Fifty-two miles were put under contract, to have such labor bestowed on them as was deemed sufficient to make the road passable. The contracts on forty-six and a half miles have been fulfilled, and five and a half are yet in progress, to pay for the completion of which the unexpended balance is deemed sufficient.

Road from Line creek to the Chattahoochee, Alabama.—Forty-five miles of this road were completed last December, and are reported to be in good condition; the remainder of the distance to the Chattahoochee, eighteen miles, have been opened by the citizens of that country.

Owing to a misapprehension of the agent, contracts were entered into for the whole amount of the appropriation, without taking into consideration his own compensation. This has produced an arrearage of \$1,544 50, which is included in the estimate for next year.

Road from the north boundary line of Florida to Apalachicola.—The survey of this road not having been finished, nothing has yet been done towards its construction.

Road from Memphis to the St. Francis river.—The operations on this road since the last annual report have been prosecuted as rapidly as circumstances would allow.

A space of 160 feet wide has been cleared throughout its entire extent, except two and a half miles; a breadth of thirty-four feet, along a given line, is cleared of all stumps, roots, &c., to receive the embankment.

Contracts are made for the whole quantity of embankment, amounting to 1,021,994 cubic yards, as well as for the construction of all the bridges, except those over sand slough, and some of the more unimportant ones on the east side of Blackfish lake. It is anticipated that the whole cost of the work, when completed, will come within the amount appropriated for its construction.

The delay which has occurred in the operations of this year has arisen from the contractors not having been prepared to take advantage of the first of the working season; from the frequent overflows to which that country is subject; from great sickness among the laborers; the entire abandonment of the work, and from the great demand for labor on the Mississippi river, and in that country generally.

Arrangements have been made this season for substituting oxen and scrapers for shovels and barrows; and it is believed that a sufficient number of hands can at all times be commanded as can then work to advantage.

It is hoped that by these arrangements one great cause of delay will be avoided, and the work will progress more rapidly.

Cumberland road in Indiana and Illinois.—No report has yet been received from the officer charged with this work.

Cumberland road in Ohio.—For the condition of that portion of this road yet in the hands of the general government, as well as for the progress made in its construction, I beg leave to refer to the report of the superintendent, herewith submitted, and marked P.

Cumberland road east of the Ohio.—The requirement of the act of Congress of March 3, 1835, forbidding the application of any of the funds appropriated at the last session towards the repair of this road until the whole should have been accepted by the several States in which it lies, has been carried into effect; and for the condition of the road, as well as the manner of the application of these funds, I beg leave to call your attention to the report of the superintendent, marked Q.

Northern boundary of the State of Ohio.—As soon as the officer to whom this duty was assigned had made the necessary arrangements for the prosecution of the improvement of the Hudson river, this service was resumed, and the observations for determining the line were completed during the summer. This officer has not yet had time to finish his calculations and make his final report on the subject; though a statement of the approximate results is expected by the first proximo, which will be laid before you.*

Monument to the memory of General Brown.—It affords me gratification to State that this monument is complete and in its place.

Lithographic press of the War Department.—The funds annually appropriated for this establishment were only sufficient for the compensation of the pressmen. Nothing then was left for the purchase of

* See Appendix, marked R, for a partial report on this subject.

materials, the repairs, &c., which were indispensable to its operation. It was found necessary, therefore, in May last, to suspend its operation, and apply the balance of the funds to the liquidation of the debts incurred since its first commencement.

Military Academy.—The condition of this institution and the manner in which it continues to sustain its high reputation is fully shown by the report of the board of visitors who attended the last annual examination of cadets.

The report is marked S, and is herewith appended.

Board of engineers.—The duties of the board have been the same as heretofore, and satisfactorily performed.

Bridge over the Wabash.—The information called for by the resolution of the Senate of the 16th of January, 1835, has not been furnished to the department, owing, it is supposed, to the constant and arduous duties of the officer who was directed to procure it. As soon as it is received it will be laid before you.

Office of the Chief Engineer.—Although one part of the appropriation annually referred to this department for application was omitted at the last session of Congress, the current business of the office has not been lessened. This has arisen from the necessity of devising ways out of small means to preserve the vast interest at stake, and to place in a train of execution other works committed to its charge. The embarrassment resulting from the small number of officers at the command of the department, the loss to the public service, and the little credit to which most of our public works entitle us, continues to be felt, and becomes more apparent as circumstances arise, calling for the active energy and skill of a body of professional engineers, combining experience with science, and whose characters and interests are identified with a faithful performance of the duties assigned them.

This embarrassment, or rather necessity, has been so often laid before you, the proofs of its existence so repeatedly given, and the unavoidable consequences as frequently demonstrated, that a repetition at this time is deemed not only uncalled for, but out of place; and I am only impelled to a reassertion of the fact by a sense of my own duty to the public, the honor of the corps under my superintendence, and justice to their unceasing but inadequate efforts.

Should it be deemed advisable by Congress to continue the system of defence and internal improvement heretofore considered called for by the interests of the country, it is hoped they will not leave their work unfinished by withholding the means of carrying their wishes into execution. I therefore respectfully recommend that such an increase be made to the present corps of engineers as was provided for in the bill of last session, and which it is believed would have received the sanction of both houses of Congress had time permitted.

I beg leave further to remark that, in consequence of the gradual increase of the business of the department for many years, the duties now required of the clerks are too onerous, either for the number provided or compensation allowed.

The prompt transaction of the necessary business of the office requires at least five clerks, whose duties are of the same magnitude and nature as those of the civil departments, and whose pay I earnestly recommend to be placed on the same footing.

All of which is respectfully submitted.

C. GRATIOT, *Brigadier General, Chief Engineer.*

Hon. LEWIS CASS, *Secretary of War.*

A.

Statement exhibiting the fiscal concerns of the Engineer department for the year ending the 30th of September, 1835; in which the funds that had accrued within that period, and the manner of accruing, are stated and accounted for by showing their application; and showing also the amounts expended upon the several works under construction.

Designation of the works.	Available for 1835, and whence derived.			Amount available accounted for.			Aggregate accounted for, corresponding with the aggregate available.	Amount expended on each work up to September 30, 1835.
	From appropriations for 1835.	From balances remaining to the treasury, and remaining in the hands of agents, Sept. 30, 1834.	Aggregate available.	Amount applied, corresponding with the amount of accounts rendered for settlement to Sept. 30, 1835.	Amount withdrawn from the treasury October 1, 1835.	Balances in the hands of agents October 1, 1835.

D.

MONROE, Michigan, September 30, 1835.

SIR: Accompanying I have the honor to enclose my annual statement of the operations on the river Raisin ship canal during the present year, and my estimate of the sum necessary, in addition to that already appropriated, to complete this important work.

On the 2d of May last the work was commenced by erecting barracks for the laborers, and commencing the constructing of the machinery necessary for excavation, and removing and keeping off the water. From that to the present the work has been advancing as the weather would allow; encountering occasional difficulties from ill health among the laborers and delay and trouble in procuring others. At length, however, I am happy to say that the work is in fine progress, that the plan has proved completely successful, and that little doubt exists that it may be completed for but little more than the sum estimated originally therefor. The cause of the excess is explained in my letter of the 13th of May last, and in the unexpected difficulty in procuring hands, and the consequent and necessary increase in the prices given for labor.

About the 1st of June such force of laborers as could be employed to advantage commenced their labors by the operation known among men familiar with labor on canals as "mucking," that is, removing the sods, turf, &c., over the whole surface of the intended canal, and placing it at the sides thereof; this was done in about half the length of the whole work, leaving the water about two feet deep in the portion thus excavated. The same mode of excavation was employed in cutting a small canal, about twelve feet wide, entirely through to the river Raisin, and just within the north line of the canal, for the purpose of facilitating the conveyance of materials, &c., from Monroe to the end of the canal nearest the lake, at which point it was determined to commence excavation. The driving of piles was then commenced at the lake on both sides of the intended cut, and ten feet from each one to the next.

There are now driven 350 in number along 1,750 feet of the work; on the tops of these piles strong tenons are cut and caps of square timber, twelve by ten inches, framed and placed. From these caps of timber land ties of timber, 20 feet long and placed twenty feet apart, extend at right angles under the embankment, being strongly keyed to the caps. On the back side of the caps and piles, pile planks nine feet in length are driven, (the piles being driven fourteen feet into the earth,) being previously well-jointed; the plank dam is then made water-tight, by the usual process of *puddling* with clay from four to six feet in depth. Cross dams are then made, and the water drawn from a section of the canal, and the *dry excavation* is made. Setting aside the *necessity* of adopting this mode on account of the porous and marshy nature of the soil, there is no doubt but economy is consulted by this mode of construction. 1st. From the perfect and lasting resistance thus established to the lateral pressure of the immense embankment; 2d. From the perfect protection thus afforded to the embankments from the *wash* produced by steamboats and other vessels navigating the canal; and 3d. From the additional channel width thus given, any vessel being able to float in actual contact with the surface of the bank. The caps are now framed and placed as above, on both sides of the work, 1,750 feet in length; the land-ties placed, and pile plank driven on each side for 1,500 feet of the distance; and the excavation entirely completed, one hundred feet wide at the surface by sixty-eight at the bottom, eleven and a half deep, in a distance of four hundred and sixty-two feet of the very worst portion of the work; and is commenced and now in progress in another section of about five hundred feet in length.

It is expected that one half of the length of the whole canal will be excavated this fall, and that enough of the last appropriation will be left on hand to commence the piers in the month of December, as no doubt exists that the latter work can be far better and cheaper done in the winter than when no ice is on the lake.

In the work are now engaged one superintendent, residing constantly on the spot, charged with the supervision of the whole labor, who is also a measurer and inspector of lumber, stone, &c., delivered on contracts; one master carpenter, charged with the supervision of all the mechanics, the direction of the framing, pile driving, &c.; about 200 to 250 laborers, to each thirty of which is an overseer appointed, who is held responsible for the industry and good conduct of his gang of laborers.

In the estimate, amounting to \$60,660, it will be observed that I have named the price for a good dredging machine. This machine is not only needed on this work, but on several others now in progress on the lake, and the good of the service will certainly be consulted in procuring one. The patent of Captain Randal, now in use in several of the eastern harbors, as well as Buffalo harbor on this lake, is of the description contemplated in the estimate.

I can only add, sir, that if the appropriation for the coming year should be made sufficiently early to enable us to make, and have fulfilled, our contracts for timber, stone and other materials during the winter, the work will be greatly expedited, and for one-third less of expense.

This memoir is respectfully submitted by, general, your obedient servant,

H. SMITH, Captain U. S. Army, on engineer duty.

Brigadier General GRATIOT, U. S. Army, Chief Engineer.

MONROE, Michigan, November 14, 1835.

GENERAL: I have the honor to report that I have this day returned from a visit to the public works at Huron and Black rivers, Ohio. Of the result of my examination of the latter work I have already had the honor to advise you.

The work at Huron requires the attention of the government as early in the spring as possible. I found much of the wood work of the piers first sunk quite defective, and that the sand of the lake driven along the shore passes entirely through the piers, particularly the east pier, and is filling up the harbor, and unless the operation is arrested speedily the beach will make anew entirely across the harbor. The inhabitants of the place held a meeting while I was there, and handed me the accompanying paper, (marked No. 1,) stating to me at the same time that they believed the sand passed around the end of the piers. An examination of the facts convinced me that it was not so, but that the mischief has occurred as above described. I propose to sink brush in bundles along the outside, and in contact with both piers,

and cover them entirely with stone. I think this will remedy the evil, but should it not, planks well jointed may be spiked on to the outside of the piers from the bottom, above water-mark, and inside of the brush and stone. It will also be necessary to repair some portions of the old work, and to remove the sand already deposited. For the whole of which I herewith submit an estimate.

With perfect respect, sir, I have the honor to remain your obedient servant,

H SMITH, *Captain on engineer duty.*

General GRATIOT, *U. S. Army, Chief Engineer.*

MOUTH OF BLACK RIVER, *Ohio, November 10, 1835.*

GENERAL: I have the honor to enclose the monthly report of the superintendent of the works at this place for October.

It is but justice to add that I am highly satisfied with the execution of the work here, and, considering the unusually bad season, with the progress made. The storms are now so constant, and the winter so near at hand, that but very little more work can be done. Of course, the funds appropriated will not all be expended this fall.

With perfect respect, sir, I have the honor to be your obedient servant,

H. SMITH, *Captain on engineer duty, agent.*

General GRATIOT, *United States Army, Chief Engineer.*

E.

ERIE, *Pennsylvania, October 1, 1835.*

SIR: I have the honor to make the following report of the operations at the works under my superintendance for the year ending September 30, 1835, viz:

Black Rock.—Two hundred and sixty-three feet of crib-work have been added to the pier projecting from the main shore, at the entrance into Black Rock basin, making the whole length of the work three hundred and fifty feet. Its object is to arrest the sand in its progressive motion along the beach, and prevent it from filling the basin, and obstructing the entrance into the Erie canal, where the latter leaves the basin to go towards Buffalo. This object has so far been fully obtained. During the last fall and winter the sand accumulated against the south side of the pier, making a dry beach for a width of one hundred and seventy feet, where, before, the water was from ten to eighteen feet deep. This beach continues to increase, but more slowly than at first.

It is proposed to add, this fall, one more crib, to serve as a pier head, which it is hoped will give length sufficient to provide against the accumulation of the sand for several years to come, or until, by the erection of other works, the causes which have produced this evil have ceased to operate.

Experience, however, alone can determine whether this work is sufficiently extended to insure the complete attainment of the object in view; and in order to provide, if necessary, for its further extension, or for the construction of another pier above it, having a similar object, it is recommended that the remainder of the estimate of Col. Totten for this purpose, amounting to \$8,000, be appropriated, so as to be available in case it is required.

The mole on Bird island has been rebuilt for a length of one hundred and sixty-five feet, leaving three hundred feet still to be executed, part of which will be done this fall and the remainder in the spring. The supply of stone was for some time cut off; and the weather, during the latter part of the season, has been remarkably unfavorable; but for these causes both the pier and the mole would by this time have been completed. The expenditures for the year have amounted to \$5,450 53.

In obedience to the general instructions of the department I have made a careful survey of the harbors of Black Rock and Buffalo, together with that portion of Lake Erie included between them, a chart of which will accompany this report. On this chart I have traced a project for the formation of a spacious harbor, by a further extension of the United States work from its present termination, at Bird island, to within one thousand feet of the new Buffalo light-house. A glance at the map will show that, by this plan, a harbor may readily be obtained, sufficiently large to accommodate and protect the whole commerce of the western lakes, and to serve as an appropriate termination to the Erie canal, when it shall have received its enlarged dimensions, and to the proposed ship canal around the Falls of Niagara. Observation proves that even in its present infant state the commerce of the city of Buffalo is too extensive for the narrow dimensions of Buffalo creek; and it is confidently believed that, before the work now proposed can be executed, it or some other one, on an equally enlarged scale, will be absolutely required by the vast interest connected with this chief point on the principal route from the ocean to the great west.

Accompanying this report is an estimate (marked A) of the expense of this project, to which the attention of the department is respectfully requested. It has been made with great care, and with the benefit of all the experience acquired during the erection of the works now existing.

Should this improvement be sanctioned by Congress, it is recommended that one-fourth part of the estimate be appropriated for the operations of next year.

Buffalo.—The operations for the year have been as follows:

1. Removing, with the diving bell, the ruins of the old cribs, which obstruct the channel, nearly the whole of which has been accomplished. The water is now so cold as to compel the postponement of the completion of this work until the next season.
2. Dredging out the curved point which projected into the creek at the inner end of the United States works.

The whole of the sand which could be reached by common road scrapers has been removed, and the floating dredging machines now move over every part, and have been kept constantly employed when the weather would admit. This operation will be continued until the close of the present season, and finally completed early next year.

3. Placing about one hundred and fifty feet of crib-work to support the tow-path, extending from the

inner end of the mole to the boundary of the United States land. These cribs will be sufficiently settled by spring to admit of placing upon them the superstructure of masonry.

4. Removing the timber work of the tow-path along the mole, and replacing it by a heavy wall laid with hydraulic mortar. Nearly the whole length of this wall has been raised out of water, and several hundred feet of tow-path flagging have been laid.

The operations have been much retarded by bad weather and an interruption in the supply of stone, but all the difficulties have been overcome, and the works can be finally completed next year with the amount now available.

The expenditures for the year have amounted to \$12,715 39. A map, exhibiting the condition of the improvements at this harbor, from a survey made in August last, will be forwarded to the department as soon as it can be prepared. At the time the soundings were taken there was nowhere less than ten feet of water in the channel leading into the creek.

As far as completed the works are of stone, and executed in a permanent and a workmanlike manner.

Dunkirk harbor.—The piers at this place have been extended three hundred and eighty-two feet, by sinking new cribs, building them to the surface of the water, and filling them with stone. This has added three hundred and twenty-two feet to the east end of the west pier, and sixty feet to the east pier or breakwater; of work previously raised to the surface of the water a length of five hundred and eighty feet has been wholly or partially completed. To finish what has been commenced more or less remains to be done for a length of four hundred and eighty-two feet, as also the repairs on the breakwater specially authorized by the act of the last session of Congress. Materials have been provided for these purposes, and the available funds are supposed to be sufficient.

Should the weather be favorable during the fall, it is hoped that before the end of the present year the whole may be accomplished.

The length of the west pier will then be 1,920 feet, and that of the breakwater or detached pier, in front of the bay, 1,340 feet.

The amount expended during the year is \$9,335 17, of which about one-third part has been devoted to rebuilding that portion of the breakwater which was washed away during the winter of 1833-34.

A careful survey was made of this harbor during the month of September, a map of which will accompany this report.

An estimate (marked B) for carrying on the operations during the year 1836 accompanies this report.

It is proposed—1st. To construct on the east end of the west channel pier a beacon-light; the necessity for which becomes every day more apparent and more pressing. On the night of the 1st of October two vessels were totally lost in endeavoring to enter this harbor in a violent gale of wind, one striking against the west pier, and one against the breakwater. The amount asked for is the same as has heretofore been submitted. 2d. To extend the breakwater in front of the harbor 640 feet at its eastern end, which will make it conform to the original design. The estimate for this has also been heretofore presented. 3d. It is proposed to lengthen the breakwater at its west end 320 feet. The space between the breakwater and the west pier is now 760 feet, an opening which greatly exposes the anchorage and the wharves at the town of Dunkirk during severe gales from the northwest. The proposed new work will extend obliquely across the opening, without encroaching in the least upon the channel way, and will leave an entrance 460 feet wide. In gales of wind from the northeast, this pier will greatly facilitate the entrance of vessels into the harbor by the western channel, which is the one almost exclusively used. All these proposed additions are indicated on the accompanying map; from which also it may be seen that, in both the channels leading into the bay, the water, in ordinary times, is eleven feet deep.

Dunkirk harbor, in its natural state, was of small importance as a port of refuge; but by means of the works already erected, and of those proposed, it will become sufficiently valuable to the rapidly increasing commerce of Lake Erie, to say nothing of its own trade, to fully justify and repay all the expenditures necessary to display and secure in a permanent manner the good qualities which it possesses. It is still the only point between Erie and Buffalo where vessels and steamboats can obtain shelter.

Erie or Presque Isle harbor.—Since the last annual report the operations at this harbor have consisted—

1st. In completing the repairs at the breach which was formed at the junction of the south breakwater and the south channel pier. This was effected last fall, and the place where the breach existed is now occupied by the most substantial part of the whole work.

2d. In forming against the piers and breakwaters, throughout their entire extent on one side and at certain places on both sides, a bank or mound of stone, thrown into the water at random, rising next the pier to the surface, and sloping outwards, so as generally to have a base equal to the depth of water at each particular point. This bank of stone has given great increased stability to the whole of the works, and constitutes an important step in the transition from the present temporary improvements to those which shall be permanent and able, without requiring constant watchfulness and incessant repairs, to resist the powerful causes which are constantly operating to produce their decay and destruction.

In the ultimate future prosecution of this part of the work it will be necessary to add to the mound of stone now commenced, in order to form a base on which, in part, to rest the masonry rising above the water.

3d. In thoroughly repairing the whole of the timber work; and where, as is generally the case, the planking has rotted or been washed off of the top of the cribs, supplying its place by a pavement of large flagging stones, carefully wedged to secure them against the action of the waves.

The funds having been exhausted, the operations have been brought to a close for the present season.

The sum expended during the year is \$19,006 34.

The works are now in as good order as the nature of the materials will admit, and may, it is thought, with propriety, be left for two or three years in their present condition, while the whole expenditures at this harbor are in the mean time directed to other objects of scarcely less importance.

It is well known to the department that the works at Presque Isle have completely realized the objects for which they were designed.

The current created by the continual fluctuations in the level of the lake, communicating through a narrow opening with a spacious isolated bay, has, by being compelled by the artificial works devised for that purpose, had energy enough to deepen the water in the narrowest part of the outlet, where the width of the channel is four hundred feet, from three feet, which it was originally, to twenty feet, which it is now; and where the channel is six hundred feet wide, to increase the depth from two feet to fourteen. As might have been anticipated, however, this powerful action, which has been so beneficial at this point, has at

others proved the source of serious evils. The first effect produced by the pent up waters of the bay was to wash away, in succession, two sand-points to which the breakwater or dam on the north side of the channel was attached.

The length of the dam was then again increased until it attained a third point, which has not washed away, solely for the reason, however, that the water had by this time, besides excavating a deep channel at the site marked out for it, created a much more spacious and important outlet at a distant part of the bay. The narrow neck connecting the principal portion of Presque Isle with the main shore having been accidentally overflowed and cut through, when the lake was raised during a gale of wind much above its usual height, the whole mass of water immediately rushed in at the breach, until the level between the bay and the lake was re-established.

As the lake subsided, the waters of the bay flowed out through the same opening, and thus a channel was immediately formed through which, at first, steamboats and schooners were enabled to pass. This breach has continued to widen by the action of the current, the channel through it at the same time becoming more shoal, until at last, where trees stood thick at the period of the commencement of the work at the east end of the bay there is now an opening of nearly a mile in width, which is still every day increasing. The whole of Presque Isle seems to be threatened, and it is not extravagant to say that, in endeavoring to perfect the entrance into this fine harbor, the whole has been put in jeopardy, and the necessity entailed upon the government of persevering until all the consequences resulting from the original and well-devised plan have been met and guarded against.

I have made a careful survey of this breach, a map of which accompanies this report. I also submit an estimate (marked C, No. 1) of the expense of closing it up, by crib-work, leaving a channel of four hundred feet in width, extending from deep water in the bay to deep water in the lake, partly to guard against any future outbreak of the water, but chiefly to provide an additional and much needed inlet to this valuable port. The works projected for this object are traced upon the accompanying map, and are respectfully recommended to the attention of the department. This improvement is unquestionably one of the most important remaining to be effected on the south shore of Lake Erie, and of its entire practicability for the sum estimated there can be no doubt, provided it is immediately commenced and prosecuted with energy until completed. The narrow limits of an annual report will not permit me to enlarge upon all the advantages to be thereby secured, but it may be proper to allude to the following considerations, in addition to the cardinal one above suggested, of preserving the bay from destruction which should induce Congress to give its sanction to the work.

Presque Isle bay, with an area sufficiently great for any supposable purpose of commerce or of war, (from six to eight square miles,) has everywhere from three to four fathoms of water, with good anchorage. These qualities, on a coast proverbial for a deficiency of ports and destined soon to be the theatre of the greatest inland commerce on the globe, give it a high value, and render it worthy of all the attention necessary to secure to its advantages their full development. At present most of the vessels on the lake are unwilling to enter it, because the same wind which is fair in going in effectually prevents their departure through the one narrow outlet, and they may remain wind-bound for many days. An outlet at each end would entirely remove this difficulty; and if such outlets existed, from fifty to one hundred vessels, even in the present state of the commerce on the lake, would collect here during every severe gale. Now all the steamboats which touch at Erie in their daily trips are obliged to go from four to six miles out of their way; whereas, if the improvement recommended were effected, they could proceed directly through the bay, and the route along the lake shore would be materially shortened.

The saving caused in this manner alone will be found by calculation to amount to a very considerable sum.

This subject has been heretofore brought to the notice of the department, in the report of Colonel Totten, in the summer of 1833, and in recommending the adoption of immediate measures I but follow in the route which he indicated as probably the one most proper to be pursued.

In the estimate for the year 1836 I have assumed that about one half of this work may be advantageously executed during that season, and the remainder the season following.

In a previous part of this report it has been stated that the water in the eastern entrance is from fourteen to twenty feet deep. This entrance, and the channel leading from it into the deep water of the bay, have been surveyed during the present summer, and a map exhibiting the result will accompany this report. It will be seen from this map that, inside of the artificial works, at such a distance that their influence is unfelt, the old channel, leading into four fathoms water, has remained undisturbed, and has not, at a full ordinary level of the lake, a greater depth than nine feet. All the steamboats have, during the present season, with more or less regularity touched at the Erie wharves; but when the water, as is frequently the case, has been depressed a little below its usual level, some of them have experienced difficulty, and a few of the largest class of said vessels are not able to enter at all. Within the memory of all the older inhabitants, this lake has remained for whole seasons from two to three feet lower than it is at present. This event is, of course, liable at any time to recur, and thus Presque Isle bay may again be temporarily closed against that class of vessels which most need its protection.

It is easy to obviate this difficulty, and secure the same depth of water quite into the bay that there is between the channel piers, and accompanying this report I have submitted an estimate for this purpose, (marked C, No. 2.) In the estimate for 1836 I have embraced somewhat more than half of this amount, and the remainder, which is for dredging, may perhaps not be required.

Erie, as the outlet of the Pennsylvania system of canals, is destined soon to be the seat of an important commerce; and this consideration, with those of a more general nature, glanced at above, must be my justification for devoting so much space to this part of my report.

Conneaut creek.—The works at this place have been entirely completed according to the original plan, and no expenditures have been made here during the past year. The sand accumulating against the west pier begins, as usual, to pass around its outer extremity, and to form a bar across the channel. The wood work above water is decaying, and at one or two places the piers seem to be threatened with being undermined; but no immediate measures appear to be necessary to guard against these evils. The depth of water in the channel is now nine feet, and the harbor has proved of great value to the commerce of the lake. Within a month as many as twenty-six vessels at one time have taken shelter here during a gale of wind. Owing to the narrowness of the creek, it is impossible for steamboats to "wind" or turn in it, and the operation of backing out through so narrow an opening is a difficult and dangerous one, particularly when the lake is rough.

Accompanying this report is an estimate (marked D) of the cost of dredging out on one side of the

creek a sufficient space to permit the largest class of steamboats to turn, and it is respectfully recommended that an appropriation for that purpose be asked for at the next session of Congress.

Ashabula creek.—The method devised in previous years for the removal of the rock which obstructs the entrance into this creek having promised favorably, it was this summer considered expedient to construct a machine especially for that purpose, which, however, from a variety of causes, could not be got into regular operation before the 2d of September. Since that period the weather has been very unfavorable; but enough has been done to increase the confidence previously felt as to its success, and it is hoped and expected that another season will not pass before it will be in the power of the superintendent to announce to the department that this troublesome and expensive undertaking has at length been accomplished. The dredging machine has been constantly in operation when the weather would admit, and has laid bare all the rock which it will be necessary to remove. The depth of water in the shallowest part of the channel is about seven feet.

Materials have, in part, been collected for the extension of the western pier.

The expenditures for the past year amount to \$4,844 12, leaving available a sum sufficient for the operations of the one to come; no estimate, therefore, is presented.

Preparations have been made for commencing the foundation of the beacon light-house, and, should the weather prove favorable, it will be sunk this fall; in which case the light-house will be completed early in the spring.

Cunningham's creek.—Nothing has been done at this place this year. The light-house is completed; but it still remains isolated from the rest of the work, and further expenditures are necessary to properly secure its base. The piers are greatly in need of repairs, which should be immediately applied, unless it is the intention of the government to abandon this improvement altogether. As a landing-place, it has proved valuable to the neighboring country; and I attach to this report a communication from the superintendent, (marked E,) presenting estimates for work considered absolutely necessary, which is respectfully submitted for the consideration of the department.

Grand river.—The west channel pier has been lengthened 300 feet to guard the channel from being obstructed by the sand which is constantly accumulating on that side at this and all the other harbors on the lake. This extension removes all danger from that cause for many years, and greatly facilitates the entrance into the harbor.

The balance remaining available will suffice to pay all arrears and bring this new work to completion this fall. The amount expended during the year is \$7,988 35.

The beacon has been lighted all summer. The balance of funds applicable to it is to be applied this month, if the weather permits, in securing its foundation.

It is proposed next year to take those steps for the permanent security of these works which cannot with safety be longer delayed.

The estimate for this object is herewith transmitted, (marked F.)

Cleveland harbor.—The operations at this important point have consisted in depositing stones against the outsides of the piers for their permanent security; in placing an additional crib, and depositing stone for securing the base of the beacon-light; and in driving outside the west channel pier a line of contiguous piles to support the foot of the slope of the permanent stone mole intended to be formed. These operations will be continued as long as the weather will admit, and will consume the whole of the available funds. The amount expended during the year is \$9,287 71.

It is proposed next year to extend the west channel pier to the full length that will be necessary to guard against the encroachments of the sand, and to progress as rapidly as is consistent with economy in giving the whole of the works a permanent character. For this purpose an ample supply of good stone may be obtained from a distance of about ten miles by means of the Ohio canal.

The accompanying estimate for the year 1836 has been drawn up under my instructions, so as to conform to these views. The estimate is marked G.

General remarks.

The accompanying paper (marked H) is a tabular list of balances of appropriations relating to works under my superintendance, drawn up in obedience to the department circular of August 6.

In concluding this report I beg leave to suggest the propriety of constructing a steam dredging machine, on the most approved plan, to be employed in succession at all the harbors on the upper lakes where improvements are going on which require the use of such an engine. There is much dredging required, but not enough at any one point to justify the construction of so expensive an apparatus, which, however, if once put in operation, would produce a saving of upwards of two-thirds in the cost, and three-fourths in the time employed, at every point where its aid would be necessary. An estimate for the cost of such a machine is herewith submitted, (marked I.)

I have the honor to be, very respectfully, your obedient servant,

T. S. BROWN, *Lieutenant U. S. Engineers.*

Brig. General C. GRATOT, *Chief Engineer.*

F.

SIR: I have the honor to submit this my annual report of the condition of the pier work and beacon-lights at Genesee river and Big Sodus bay for the year ending on 30th September, 1835.

Of Genesee river.—From the year 1829 to that of 1834, inclusive, the appropriations for the pier work at the mouth of this river have averaged \$15,167 per annum, which sums have been expended in constructing 5,240 feet in length of pier, of an average width of eighteen feet, and from ten to seventeen feet deep, forming a double line of docks that receive between them the Genesee river, which work has fulfilled the purpose for which it was constructed—namely, it has cleared out a crooked channel of from six to seven feet in depth of water that could not be entered in a dark night, so as to have formed at the present time a channel of thirteen feet depth of water that can be entered and passed through at any time of night. These piers have been formed of large hemlock timber, in cribs, connected together and

filled, and sunk with stone, and have subsided into the bottom of the lake to a depth of from two to seven feet. This sinking into the sandy bed of the lake has given all the stability to the work of which the material and structure were susceptible. The timber work that is above water is beginning to decay, and is in a proper condition to be substituted by stone masonry. The timber work under water will endure for ages.

The appropriation for the year 1835 was made with a view to finish the pier work; the amount, \$2,390, has been and is now applying to that object. But the work will continue to subside for another year, and will require an appropriation of \$3,000 to repair damage for the year 1836.

Of the Genesee river beacon-light.—Upon the west pier in the lake, at the distance of 2,700 feet from the shore, a beacon of stone has this year been erected twenty-five feet high, an octagon of twenty feet in diameter, upon a foundation of forty feet square, in fifteen feet depth of water, the beacon tapering to a diameter of ten feet at the top, agreeably to the plans heretofore submitted to the department. The masonry of this beacon is now open, and will remain so for the balance of this season, as the temporary light now in use will answer its present purpose for the remainder of the season for navigation, thus giving the masonry time to cement in its exposure. Possibly during the heavy weather of the coming winter the foundation, that is forty feet square, may settle one or two feet in the sandy bed of the lake. In case of such subsidence, and it be unequal, then the work will require to be adjusted in the next season. The balance of the beacon appropriation now on hand will meet the expense of the structure of the building.

Of Big Sodus bay.—From the year 1829 to that of 1834, inclusive, the appropriations for the pier work of this bay have averaged \$15,288 per annum. The work constructed thereby amounts to 5,900 feet of length of pier, sixteen feet wide, and from six to seventeen feet in depth. These docks enclose the entrance of the bay from Lake Ontario, excepting the channel, that is to be dredged out between the two branches or T's that extend into the lake. The piers are upon the same plan, and formed of similar materials to those at Genesee river, but they have subsided very little into the bed of the lake in consequence of the hard-pan at the bottom, and consequently exhibit a more uniform straight line than those at Genesee. The timber above water is also beginning to decay.

The appropriation for Sodus bay for the year 1835 was \$11,790, and became available in May—the object, to finish the piers and to plough and dredge out the hard-pan of the channel by machinery. The first has been nearly accomplished, and will be finished this season. The second is in operation as follows: Recommencing the work upon the piers and the construction of the beacon brought me into the month of June, when, agreeably to my report to the department, I proceeded to the foundry near West Point to determine how much steam and other machinery could be constructed at that place with the amount of funds applicable to that part of the necessary expenditure, and I found that there were not sufficient funds to procure steam and other machinery to commence the dredging even at so early a day as the ensuing spring of 1836. I therefore proceeded to visit and examine several new working machines in the harbors of Baltimore, in Maryland, and New London, in Connecticut. The dredging machinery that I found at work in Baltimore harbor was efficient, but more expensive than was contemplated. In New London harbor I found the machinery simple and efficient, and comparatively not expensive, and propelled by horse-power; also, that the part of New London harbor which had been dredged by these machines was as hard as the Sodus bay pan. I concluded therefore that it would be best to invite the proprietor of these machines, Mr. Holmes, to visit Lake Ontario, to compare the work that was necessary to be done at Sodus bay with the work that had been accomplished by Mr. Holmes at New London.

This request was complied with, and the result, thus far, has been that I have set Mr. Holmes at work in constructing the machines at Sodus bay, and he will commence the cutting and dredging of the hard-pan at Sodus early in the ensuing spring of 1836. The terms upon which this work is to be executed are as follows: For cutting out four hundred thousand cubic feet of pan not to exceed three cents per cubic foot, delivered to the United States agent in gondolas now constructing for that service. For such balance of cutting as may be found necessary, a less price per cubic foot, as may then be agreed upon when the work has come down to the loose bed below the pan. It is my opinion that an additional cutting of four hundred thousand feet below the pan will have accomplished the object thoroughly. Perhaps the motion of the water may so aid in moving the sub-strata as to diminish materially the expense of dredging.

The balance of the Sodus bay appropriation not drawn from the treasury is one thousand dollars; this sum added to the balance that will be in the hands of the agent on 31st December, 1835, will diminish by five thousand dollars the estimated sum for dredging the Sodus channel in the year 1836, which estimate is sent herewith, amounting to \$17,600, leaving a balance of \$12,600 requisite to be appropriated for clearing out obstructions at the entrance of Big Sodus bay in the year 1836.

Of the beacon-light at Sodus bay.—A structure of stone of the same form, dimensions, and foundations as the beacon at Genesee river has been commenced at the extremity of the west pier of Sodus in Lake Ontario, and is three-fourths finished. For the same purpose of cementing and settling, as of that at Genesee river, this beacon will also remain open until the spring, the temporary light continuing to answer its present purpose.

The balance of this beacon-light appropriation now on hand will cover the expenses of its completion.

Respectfully submitted,

J. G. SWIFT.

General GRAYTON, *Chief Engineer.*

Estimate of funds requisite to remove the obstructions from between the piers at Big Sodus bay for the year 1836.

For the employment of Mr. Holmes and his machinery in cutting out and delivering into United States gondolas 400,000 cubic feet of pan, at three cents.....	\$12,000 00
For two gondolas with folding sides, at \$650.....	1,350 00
For chains and anchors.....	450 00

For labor in gondolas and boats.....		\$1,080 00
For superintendence and contingencies.....		2,720 00
		<hr/> 17,600 00
Balance in the treasury	\$1,000 00	
Balance in the agent's hands on the 31st December, 1835	4,600 00	
		<hr/> 5,000 00
Wanting to be appropriated for the year 1836.....		<hr/> <hr/> 12,600 00

J. G. SWIFT.

G.

NEWPORT, R. I., December 27, 1834.

SIR: The "special board of engineers," convened by your order of the 19th ultimo, to take into consideration the subject of improving the Hudson river and of devising a plan to overcome the obstructions to the navigation between Waterford and a point below Albany, to be designated by Captain Talcott, and directed by said order to review two projects which had been suggested—one by a canal, and the other by deepening the bed of the river—and to give its opinion as to their relative merit and practicability, accompanied by estimates of cost, present the following report:

Section 1. The information touching this subject furnished the board, exclusive of such as had been collected in personal examinations of the river during the autumn of the present year by Captain A. Talcott, a member of the board, is comprised in—

1st. A report of a joint committee of the legislature of New York, dated March 12, 1818, which includes a report of Mr. Thomas Moore, engineer, of February 25, 1818, and a report of Mr. Josiah Beckwith, of July 16, 1817.

2d. A letter of commissioners for improving the navigation of the Hudson river below Albany to the governor of the State, dated March 31, 1818.

3d. A report of the commissioners appointed to report a plan for improving the navigation of the Hudson river, communicated by the governor to the senate and assembly of the State on the 1st of March, 1820, with which report are connected a report and estimate of Mr. Henry Butler of February 21, 1820; a report of Mr. E. C. Genet on a ship canal, accompanied by schedules from A to H, inclusive, schedule E being an estimate of cost; and a map by Mr. Randal, on a large scale, and much in detail of the river from below New Baltimore to Troy.

4th. A report and estimate, without date, of Mr. Dewitt Clinton, United States civil engineer, to Lieutenant Colonel John J. Abert, topographical engineer, communicated by the Secretary of War to Congress on the 30th March, 1832, there being connected with this report a map on a large scale of the survey made by Mr. Clinton from below New Baltimore to Waterford.

Section 2. As to the number and nature of the obstructions, and as to tides, currents, &c., it appears from the above sources of information—

Section 3. That in 1819, "from the city of Troy to the city of Albany, at the low water mark of last summer, (1819,) taken at the ferry at Albany, and upon which the soundings have uniformly been gauged, there are not less than eight shoals over which the depth of water averages from 3 to 4.50 feet."

Section 4. That from the examination of 1831, (by Mr. Clinton,) to obtain a channel of nine feet deep at low water, and one hundred and fifty feet wide, excavation would be required at thirteen places between Troy and Albany, varying in depth from one to six feet; or, in other words, that in thirteen places the depth of water varied from three to eight feet.

Section 5. That in 1819, "south of Albany, as far as Castleton, the water in general is shallow, and over five extensive bars varies in its depth from 4.50 feet to 5.60 feet; and that between Castleton and New Baltimore there are more intervals of deep water and only four bars, over which the water varies from four to seven feet."

Section 6. That in 1831 it was found the river would require deepening in six places between Albany and Castleton from 1 to 2.50 feet to obtain nine feet water; and that in no place south of Castleton was there less depth than nine feet water in the deepest part of the channel.

Section 7. That it has been ascertained from recent examination that the shoals and bars are now composed of a mixture of sand, gravel, and pebbles, above Albany, and of sand below Albany; and it was stated by Mr. Clinton that in 1831 all the bars above Albany are gravel and other heavy soils, while all below Albany are sand and other lighter deposits.

Section 8. That the mean flow and full of the tides of the river, when not influenced by freshets, is said by Mr. Genet to be: At Troy, 1 foot; at Albany, 2 feet; at New Baltimore, 3.60 feet. And from the registers kept by Mr. Clinton in 1831 the mean was: At Troy, $13\frac{1}{10}$ inches; at Albany, $25\frac{1}{10}$ inches; at Castleton, $20\frac{6}{10}$ inches; at New Baltimore, 34 inches.

Section 9. That the only observations on the velocity of the currents were made during the low stage of water, they giving a variable velocity between Troy and Albany of from 0.60 feet to 2.00 per second, according to local circumstances; and between New Baltimore and Albany of from 0.75 to 1.70 feet per second.

Section 10. And that from New Baltimore to Albany the distance is about 15 miles, from Albany to Troy about 5½ miles, and from Troy to Waterford 4 miles, making the whole distance within which improvements are called for about 24½ miles.

Section 11. For more definite and satisfactory information than can be communicated verbally in relation to the relative positions of the respective shoals; their form and extent; the width and direction of the several parts of the river embarrassed by them; the position, form, and magnitude of islands, &c., the board refer to a map, on a scale of 440 yards to one inch, of the portion of the river lying between New Baltimore and Troy, herewith presented.

Section 12. The attempts at improving the navigation of the Hudson hitherto made have been of two kinds; and, as the board believe, of these two only, namely: 1st. The erection of a low dike or "jettee" above certain of the shoals designed to confine the channel in low water.

As to this application, we cannot ascertain that any lasting benefit has resulted therefrom; at any rate; as the resulting benefit, if any, is made a matter of question, it must be trifling, and we know that it is inadequate. 2d. Applying to the shoals the dredging machine, thereby mechanically removing the impediments. This application has certainly afforded temporary advantage; but a very general impression prevails that the improvement is transient, outlasting the period of low water chosen for the application, but scarcely surviving the first flood. The river has, however, in particular places, been greatly benefitted, as it were, incidentally, by works not having that exclusive object. The increased depth along the front of the new docks at Albany being a strong instance.

Section 13. The board approach the particular investigation of the subjects committed to them with great diffidence.

Considering their want of experience in operations of the nature of those now to be examined, and the newness to them of some of these subjects, even as matters of study; considering, on the one hand, the incalculable benefits to result from a successful solution of the difficulties, and on the other, besides the great immediate loss, the perhaps irremediable mischief that mistaken and erroneous views on their part may involve; though they shall apply their best faculties to an investigation which their duty does not permit them to avoid, they feel bound to ask as to their results, not confidence, but caution.

Section 14. We shall first confine ourselves to the subject of canals, as a mode of avoiding the river obstructions below Albany; afterwards examining the means of adapting the bed of the river, from Waterford downward, to the purposes of navigation.

CANALS.

Section 15. In March, 1820, Governor Clinton presented to the legislature of the State of New York the report of a board commissioners, consisting of himself, Simcon DeWit, J. V. N. Yates, M. Van Buren, E. C. Genet, George Tibbets, and Townsend McCoun; which report embraced the individual project of Mr. E. C. Genet, one of the commissioners, for a ship canal.

Section 16. The project of Mr. Genet contemplates a canal 18.70 feet deep below ordinary high water, 35 feet wide at the bottom, 109.8 feet wide at the top, and having a length of 12 $\frac{3}{4}$ miles. "The course of the canal would be from Greenbush, through the flats and a creek, to the front part of the village of Castleton; thence through meadows and islands to the Shodack creek, as far as Schermerhorn's store; from thence, in an oblique direction, it would reach, through an island and a creek, the outlet of Vydyde Hook." The report of Mr. Genet states that the upper mouth of the canal would be accessible from the Albany docks with 13.30 feet water at low water mark of summer; and the lower mouth with 13.70 feet at the lowest water; there being, however, on a shoal from two to three miles below the canal a depth, under the same circumstances, of 11.80 feet. The report further states that the average fall in the ground from Greenbush to the lower outlets does not exceed 1.50 feet; that the high water at Albany and at Shodack, twelve miles below, are on the same level; that the difference between high and low water marks at Troy is 1 foot, at Albany 2 feet, and at New Baltimore (one mile below the lower mouth) 3.60 feet; that numerous examinations, by borings to the depth of 21 feet, show the matter to be excavated to consist of "coarse sand and loam, except a distance of 1,800 yards, about 900 of which is blue and the remainder yellow clay;" that the form of the shores of the neighboring creeks, and the difference of levels in the neighboring river and in the wells in the vicinity, indicate a soil not liable to wash and tenacious of water; that the survey and levelling give the average height of surface along the line of the canal as 1.915 feet below common high tide, leaving 16.785 as the average depth of cutting; that it is proposed to raise an embankment two feet above the highest spring freshets along each bank of the canal; the western embankment having sufficient breadth to serve, being gravelled, as a towing path, and to erect a piece of masonry (furnished with a safety gate) of the same height at each end.

Section 17. Connected with the report is an estimate of the expense of the canal, drawn up by Mr. John Randal, jr., engineer, which places the sum total at \$727,715 08, or about \$57,000 per mile. It is necessary to observe here that this estimate relates only to the construction of the canal proper.

The canal has a depth within itself of more than 18 feet; but to obtain access thereto with this depth at the lower end, and to carry the same depth to the docks at Albany, in order to profit of the deep cut for purposes of ship navigation as high as that city, would probably require in the river extensive dredging, and perhaps structures of considerable extent, calculated to maintain the increased depth; operations somewhat uncertain as to durable results, and expensive in their nature; but to what degree called for, or to what degree expensive, we have not the data to determine.

Section 18. From the preceding statement, drawn from Mr. Genet's report, there appears to be no serious obstacle in the nature of the country, so far as can be foreseen, to the construction of the canal. In taking 22 cents per cubic yard, however, as the price of excavation the estimate has not contemplated any obstructions to the work from water; an obstruction not unlikely in such deep cutting; which, in common prudence, ought to be anticipated, and which, if occurring, would considerably enhance the cost of the canal.

Section 19. There will be, we think, in this, as in every other canal habitually navigated by large steamboats, a heavy item of expense, to be lessened probably by ingenious devices, but which no device can elude; we mean the protection of the banks against the wash of water set in motion by passing steamboats. As an approximate estimate of such a protection, and for the sake of comparison, we have supposed the slopes lined with planks from the bottom to the mean surface of the water, and thence for a further height of five feet, with a thin leaning wall. The cost of the lining for this canal we make amount to \$474,600; which sum, added to Mr. Randal's total of \$727,715 08, gives \$1,202,365 08.

Section 20. With this addition to the estimate, and such others as we have above supposed necessary or prudent, without, however, being able to give amounts, the projected ship canal might be completed, and the result would be a fine draught of water from Albany downward.

Section 21. It is not for the board to discuss the main question involved in the above project, namely, the advantages of an unobstructed navigation for the larger sea-going vessels from the ocean to the city of Albany. How far the city of Albany might have the disposition or the power to avail herself of such an advantage; how far the extensive regions which communicate with the Hudson would be bettered by a change in the commercial character of that city; or if any, what amount of national advantage would accrue, the board have not the means of estimating. They can only say that if such an improvement of the navigation should be deemed essential to these and other great interests, the improvement may be attained.

Section 22. The canal project above referred to is, however, worthy of consideration under another aspect. Giving up the condition of ship navigation, the same route will afford a free passage to river and coastwise craft from Albany downward, at a less depth of excavation, and without dredging, or any constructions exterior to the canal, and consequently at a greatly reduced cost.

Assuming the same state of things as regards surface of ground, nature of soil, &c., as is assumed in Mr. Genet's project, and also the same route, an average depth of cutting of 8.085 feet will give a draught of ten feet water. In answer to a question by Mr. Dewitt Clinton as to "the depth of water required by the interest and the amount of trade at extreme low water," Mr. James, of Albany, replied, "A depth of eight feet water is necessary at the lowest tides; depth of eight feet water will be a great relief from the present difficulties, but if it be increased to ten feet it would directly create a West India and whaling trade, and other foreign enterprise, which, of course, would add to the prosperity of the city, and increase the shipping and revenue of the United States government;" and Mr. McCoun replied, "Depth at low water should be from eight to ten feet." Using the assumptions before announced, it is found that the cost of a canal 109.80 feet wide at top, and ten feet deep, at the price of excavation allowed in Mr. Randal's estimate for excavating the deep canal, namely, twenty-two cents per cubic yard, both banks being lined with planks and stone, and all other allowances being the same, would be \$810,878.

Section 23. But both the project of Mr. Genet, and the modification thereof just indicated, suppose the state of high tide for the full depth in one of 18.50 feet, and in the other of ten feet; and it would certainly be less to the disadvantage of the deeper canal than of the shallower to be restricted to the time of high water for its maximum depth, because of the smaller number of vessels of great than of medium draught.

Section 24. If it be deemed important to have, without resort to locks, about ten feet draught along the canal at all times of tide, then it will be necessary to deepen the above excavation two feet at the upper, and about three feet at the lower end. An average additional cut of 2.50 feet in depth will bring the estimate, at the same prices, to \$935,340. The addition to the above estimate being \$124,462. The substitution for this additional excavation of an adequate number of locks of suitable size would, it is thought, besides retarding the circulating trade, involve a considerably greater expenditure.

Section 25. In order the better to institute comparisons as to expense, the surface breadth of 109.80 feet, adopted in Mr. Genet's project, has not as yet been departed from; that breadth being calculated for passage of two ships of six hundred tons, or two sloops loaded with boards. On presenting the question as to "the width of the channel necessary to be opened at the several bars to give the trade sufficient security," Mr. Clinton was answered by Mr. James, "a width of one hundred and fifty feet is necessary;" and by Mr. McCoun, "width of channel from one hundred to three hundred feet." Giving to these replies the value belonging to them, as the testimony of gentlemen deeply interested in the subject, and long familiar with the state of the river and its trade, it would seem that one hundred and fifty feet would be the minimum to allow as a breadth of channel to improvements at the bars in the river, but a much more restricted width might evidently be admissible at these few and distant points than should be assigned throughout an extended reach.

The extent to which steamboat power is already applied to the trade of the river, and to the conveyance of passengers, the great breadth of the vessels, the agitation they cause in the water, and the space they need to pass each other in safety, seem to demand for the width of the canal at least two hundred feet. Taking, then, two hundred feet for the surface breadth, twelve and a half feet for the average depth of the bottom below high water, in order that there may be at common low tide a depth of ten feet, giving slopes of two to one to the banks, and assuming the same average ground level as before, the cost of excavation will amount, at twenty-two cents per cubic yard, to..... \$994, 216 95
 Doubling the cost of land, as estimated by Mr. Randal..... 22, 928 00
 Taking Mr. Randal's estimate for gravelling towing-path, for sewers, filtering-dams, safety-gates, dredging, and steam engine..... 18, 529 60
 Lining both sides of canal with planks up to low water level, and facing the banks with stone for a further height of five feet, say..... 350, 000 00

Add for contingencies, ten per cent..... 138, 567 45

Total..... 1, 524, 242 00

Section 26. Believing it not improbable, from the great annual increase of the river trade, that it would soon find considerable embarrassment from the width of two hundred feet just assumed, although that width might meet its present exigencies, we have next taken the supposition of a width of three hundred feet, and find, by the same process of estimating, a cost of \$2,174,640.

Section 27. The board cannot be answerable for any inaccuracies in the preceding estimates. Besides being without experience in operations of the nature of these in question, it has not been in their power to make personally the necessary examination of the localities or to collect the multifarious data requisite for an exact statement of prices and a just valuation of workmanship and materials. The estimates deserve some confidence, however, as comparative estimates, and as such are considered useful in illustrating the subject before the board; and considering them in this light, it is proper to notice here that there is much less reason to apprehend considerable deficiencies in the estimates for the seven feet and the ten feet canals than in that for the sixteen feet canal, because, as before observed, no operation exterior to these shoaler canals will be called for, and because the bottoms being at less depth, the removal of the earth will be accomplished at a cheaper rate, whether embarrassed by percolating waters or not. It is proper to observe, further, that Mr. Genet's project having been located with reference to a navigation for the larger class of ships, it is not impossible that when seeking for the exact route of a communication of a different nature, as regards the form of the vessel and draught of water, a cheaper path may be selected.

Section 28. In order to bring the several preceding estimates into one view, they are here recapitulated:

1. Mr. Genet's project of a canal about 16 feet deep at low water, 109.8 feet wide at top, 12½ miles long—Mr. Randal's estimate being increased by the supposed cost of lining the banks, cost of dredging, and other work exterior to the canal, not included..... \$1,202, 365 00
2. A canal about 7 feet deep at low water and 10 feet at high water, 109 feet wide at top, 12½ miles long, banks lined, no work required exterior to the canal..... 810, 878 00

3. A canal about 10 feet deep at low water, 109 feet wide at top, 12 $\frac{3}{4}$ miles long, banks lined, no work required exterior to the canal	\$935, 340 00
4. A canal about 10 feet deep at low water, 200 feet wide at top, 12 $\frac{3}{4}$ miles long, banks lined, no work required exterior to the canal	1, 524, 242 00
5. A canal about 10 feet deep at low water, 300 feet wide at top, 12 $\frac{3}{4}$ miles long, banks lined, no work required exterior to the canal	2, 174, 640 00

Section 29. Mr. Genet presented, besides the project we have been considering, a scheme and estimate for a "sloop and steamboat canal" of 6 $\frac{1}{2}$ miles long, about 12 feet deep at low water, and 72.60 feet broad on the surface, having 13 basins 130 feet long, in which the surface width of the canal would be increased to 112.60 feet.

As this canal turned off from the river at Castleton, leaving below its lower mouth "five bars" to be removed by dredging, and other river work, thereby involving a mixed system of operations, it will not be herein considered.

Section 30. The board are of opinion that the preceding examination of canal projects has shown with some precision the relative expense at which communication of this nature, more or less capacious and accommodating, may be effected; and also that although the absolute expense is shown only approximately, this approximation is an interesting and important result.

Of the practicability of either of these projects they have no doubt; and were the subject before the board confined to the improvement of the Hudson downward from Albany, the problem would be limited to a comparison of the effect of means directed, in one case, to the making a new channel, and, in the other, to the improvement of the natural one. Should such a comparison show, for example, that the means demanded for an artificial channel of the required depth, and a certain width, would give to the river an equal depth, with a width much greater, the problem, so far as regards the kind of improvement, would be solved; and, on the other hand, should it appear that uncertainty as to both results and means would attend every step in the labors upon the river, it might be prudent still to consider the problem solved, yielding cheerfully to demands, though great, which cannot disappoint, rather than encounter an alternative surrounded by doubt and hazard. But the problem before the board is not thus simple.

The canals we have been considering reach no higher than Albany; and the form of the shores above that city has, as we believe, been considered as restricting improvements to the bed of the river. From the materials before the board, it is, at any rate, necessary to take the supposition that above Albany the river is, if possible, itself to be improved.

We are, therefore, for this portion of the navigation necessarily driven to a choice of means of improvement from amongst a class of expedients which have often disappointed sanguine expectations, it being our duty to find, if we can, one of these which shall hold out the promise of fulfilling all important conditions. And as we may anticipate, from the nature of the obstructions, that any expedient which shall be found applicable above will not be less so below Albany, it will be proper to take into the investigation the whole range of the embarrassed navigation.

The cost of so much of the river improvement as will be needed below Albany may then be compared with the cost of the several canals.

IMPROVEMENTS IN THE BED OF THE RIVER.

Section 31. The survey by Mr. Randal of this part of the Hudson was made in 1819.

In 1826 the new docks of Albany, which considerably contract the section of the river and change the outline of one of its shores, were erected. By the survey of Mr. Clinton, in 1831, it was proved that a very important change, giving quite sufficient depth, which has been maintained up to the present time, had been wrought in the channel along the face of these docks by the contracted current, the average depth having been considerably augmented beyond that shown on Mr. Randal's map.

That this effect has not been caused by the tides may be inferred from their small velocity at that place, viz., twelve inches per second on the surface, or a little more than six inches per second on the bottom—a velocity insufficient to disturb the mixture of sand, gravel, and pebbles, whereof the bottom is composed.

The cause must be sought, then, in floods. But here we are greatly in want of facts. Had we the exact slope of the river for a given length, and also the measure of its section in different states of the flood, we might calculate the velocity with some accuracy. But we must make the best use we can of such information as we possess. Mr. Randal states that in extreme low water the fall from Troy to Bath, (opposite Albany,) five and half miles, is two feet. Lieutenant Colonel Talcott has observed that, in a low condition of the river, the dock at Watervliet is at the same height above the water as the dock at Albany; while the waters of a moderate flood, which just reach the top of the Watervliet dock, are two feet below the top of the Albany dock: here is, therefore, a fall of 24 inches in five miles for this flood; or observing the same slope, a fall of 24.6 inches in the five and a half miles from Troy, which, added to that of 24 inches at low water, gives a descent of 50.4 inches in five and a half miles, equal to 9.164 inches per mile. According to the books, the velocity along the bottom at Albany, due to this fall, to the section of the river at this place, and to this state of flood, which rises at Albany about 8 feet above lowest water, giving a mean depth there of 16.74 feet, would be about 42 inches per second, an action that will bear off the coarsest gravel, according to the authorities. Taking now a flood, such as not infrequently occurs, of 4 feet above the Albany dock, which would amount to a rise of the river above lowest water of 14 feet, and considering the slope the same, the bottom velocity at Albany would be 51 inches per second, requiring a mixture of pebbles to protect even the coarsest gravel. This estimate, probably near the truth, of the force of the current in freshets, fully accounts for the improvement of the channel since the construction of these docks. The present most contracted section of the river along the Albany docks, at lowest water, is about 800 feet in width, by an average depth of 8.14 feet, the greatest depth being 12 $\frac{1}{2}$ feet.

Section 32. Supposing the bottom to be everywhere of similar materials, it is an inference scarcely admitting a doubt, that could the channel, being kept nearly straight, be everywhere made of the same width, the slope of the river being also the same, there would be wrought out, by the wearing of the current in floods, a similar depth of channel throughout all the parts of the river thus contracted. But as the slope might vary in different parts of the river, though the bottom might be the same, then, wherever the slope were more gentle, the channel would need greater contraction, and where steeper less contraction to cause a like corroding action. And the slope remaining the same, the nature of the bottom might

vary, requiring greater or less contraction to produce a velocity answering to the resistance of the bottom. Again, both the slope and the nature of the bottom may, as regards different portions of the river, be variable, which is the most probable supposition. And finally, the degree of action upon the bottom, whatever may be its nature, or whatever the slope, may be made to depend on the height of waters kept within the restricted limits.

Section 33. Admitting that the principles just suggested are applicable to the improvement of the river, it is evident that the data they involve are matters to be obtained by observation; and we will add that it is of the first importance, if these principles are to be so applied, that the observations are to be made with great care and accuracy. As to surveys and soundings of the river, the maps of Mr. Randal and Mr. Clinton are perhaps sufficient; but several slopes of the river, at several different elevations of the growing flood, the measure of these elevations, the nature of the bottom to some distance below their surfaces at all the bars, are yet to be obtained, and are deemed indispensable to a correct and safe application of these principles.

Section 34. Certain expedients hitherto applied in this range of the Hudson, although similar in kind, have not, so far as we can ascertain, been so situated or so formed as in any degree to invalidate by their want of success the truth of the above principles. At or near certain shoal places dikes have been constructed, tending to keep the channel between narrow limits at a low state of the river; but being raised little, if at all, above the level of low water, they confine the river at a low state only; and as it is questionable whether the slightest benefit has resulted, there is a good reason to conclude that, in that reduced state of the waters, there is not sufficient velocity to act upon the bottom.

Section 35. The ideas we have adopted are, that if the river be confined between banks of such height, and at such a distance from each other that the velocity of the water therein, when the banks are full, shall have the intensity of action called for by the nature of the bottom, then the channel will be deepened; and if the proportion of height and breadth called for by the nature of the bottom be everywhere duly observed, then the depth will be uniform. It is the flood, then, on which we rely; but not on *all* the flood, for several reasons: 1st, because certain localities may require a lateral restriction, such that if all the flood were kept in, the corrosion of the bottom would be too great, endangering the structures and bearing into the lower portions of the river an unnecessary and perhaps hurtful amount of matter; 2d, because it is desirable that the ice which accompanies the crest of the flood should pass over the dikes without injury to them; and 3d, because by allowing the height of the flood, when the waters are most turbid, to pass freely over into the numerous lateral channels and basins, a great amount of deposit will be made therein, which would otherwise be transferred into the lower river.

Section 36. We do not mean, by any expression implying the confinement of the river within narrower than the natural limits, that we consider it actually necessary to construct these artificial bounds in all cases where the natural bed may be wide.

It may happen that the course of the channel of the river is such as to leave much dead water over a large proportion of the bed, although its own abrading action along its tract is considerable. Nor do we mean that, in more common cases, the dikes must be strictly continuous; numerous breaks may undoubtedly be left with impunity and even advantage.

Section 37. We now proceed by way of illustration to supply these ideas to the particular case of the Overslaugh bar.

The distance from Beacon island to Papscaunce island is about 1,200 feet, and the average depth at low water about six feet.

If a dike be raised to the height of seven feet three inches above lowest water, upon the eastern shore of Beacon island, and be continued to Bogert's island, keeping everywhere at the same distance (of 1,200 feet) from Papscaunce island, the passages behind Westerloo's, Bogert's, and Papscaunce islands being closed, then on the occurrence of a flood equal in elevation to the top of the dike, the water passing the Overslaugh bar must have a mean velocity of thirty-six inches per second, and a mean depth of 14.2 feet, to discharge the waters which rush by the Albany docks.

The deepening process must begin when the waters shall have risen to within 1.40 feet of the top of the dike, because at that altitude the bottom velocity will be about eighteen inches per second; more than adequate to transport the sand composing the bar. As the flood shall continue to swell from this height to the top of the dike, the velocity along the bottom will rapidly increase (and also its corroding action) until it amounts to about thirty inches per second, corresponding with the mean velocity of thirty-six inches; this last bottom velocity of thirty inches being sufficient to transport the coarsest gravel. But when a practical application comes to be made of these ideas, the above proportions of heights and breadths, calculated on the somewhat vague information before us, may require considerable modification.

For example, the substance of the bar may be uniformly very fine sand to a considerable depth, or, after penetrating a little, it may be found to be quite coarse, or mixed with gravel or pebbles; either of these conditions would require a departure, one way or the other, from the above propositions.

Section 38. It is not impossible that after the structures at either of the sandy bars shall have accurately and fully accomplished their first object, namely, have opened a wide and deep channel, they may call for modification, to enable them to fulfil the further object, no less necessary, of keeping the channel free.

Certain of the obstructions appear to be made up of pebbles mixed with sand and gravel; portions of which materials may be transported, in the operation of breaking up these latter bars, as far as the sites of the bars of sand, and, as at these the velocity first resorted to was only sufficient to move sandy matter, they will be there deposited—building up, unless prevented by this modification, bars of gravel in the places of the original bars of sand.

Section 39. Modification may also be demanded by errors in the application.

So many circumstances come in play, variously aiding, neutralizing, or counteracting each other, that it is not in human calculation to appreciate them with exactness.

For instance, wherever the form of the river requires that the dike should lie in or near the bottom of a curve, it will be found, in most if not all cases, that the most rapid current will be on that side of the river, and that there will be, in fact, an accumulation of water along the dike, above the general transverse level; but in determining the amount of this accumulation, or to what degree the current will be accelerated thereby, there is, within certain limits, a probability of error; and if an error be committed, the dike may need a reduction of its altitude, to prevent its being undermined; or an augmentation, to afford the requisite velocity. The Albany dock well illustrates the principle of the greater velocity being on the concave side of the river; the average depth lies about the middle of the river, while all

the shoaler water is on the east side, and all the deeper on the dock side; the deepest being quite near the dock.

Section 40. We have, in considering the effect of floods, thus far spoken of them as the sole agent whereby the deepening of the channel was to be effected, and as our reliance to that end.

Strictly speaking, however, they constitute our sole reliance only as the agents whereby an improved channel is to be maintained in good condition. And as they need, to qualify them for this office, the same powers that would be needed were they relied on to excavate the channel also, we have hitherto considered them as fulfilling both offices. Having shown that the floods may, through the means of artificial works, be so directed and controlled in their action as to give everywhere the necessary depth of water, and, as a necessary consequence, maintain a sufficient depth during their continuance, we come now to consider a very important point, namely, whether it will be prudent to allow the floods to make these extensive excavations, throwing the matter they remove into the lower parts of the river; and if not, what will be the best mode and probable expense of making them by other means. As to another point, also important, viz: whether a low condition of the waters will be likely to affect injuriously the deepened channels, which may as well be noticed here, once for all, we have to observe that, considering the velocity of the water will be much too small to move a bottom which has been regulated by much greater velocity of a flood, and that the waters are but slightly turbid at that season, no change of consequence need be apprehended.

Section 41. Mr. Randal estimated the quantity to be removed, in order to obtain a channel 660 feet wide, and nine feet deep at the lowest water, from State street, in Troy, to Vyvde Hook, below Coryman's overslough, at 8,221,676 cubic yards; although this quantity is several times greater than that which it will actually be requisite to remove, as will be shown in the sequel, we will, notwithstanding, endeavor to trace its probable effect upon the river.

Section 42. A part of the heavier and grosser portions of matter would undoubtedly be dropped in certain hollows which are considerably below the common bed of the river; and a proportion of the finer particles would flow over with the water into the lateral channels, and be deposited in the stiller places; but, allowing that the whole quantity will be transported below the range of the artificial works, we find it stated by Mr. Genet, "that from New Baltimore to Hudson," a distance, we believe, of about twenty miles, "following the east channel, the depth of water averages seventeen feet, except at one place, one mile below New Baltimore, where at the lowest water the depth is only 11.80 feet." We also find by the last sheet of Mr. Randal's map that the average depth at lowest water, for one mile below New Baltimore, is about fifteen feet; or more accurately, that the average depth, between the lines of nine feet water, is 15.45 feet; which will leave a depth of 6.45 feet to be filled up of the bottom, without in the least incommoding the navigation. This depth into the average width gives more than 1,000,000 cubic yards to a mile; so that a length of eight miles would afford room for all the deposit, even were the average depth fifteen feet only, instead of seventeen feet; and the average width no greater than that of the small and narrow portion of the river taken near New Baltimore.

Section 43. It is not to be supposed, however, that this matter will all be deposited within this distance. The more probable operation will, in general terms, be this: on reaching a point where the velocity is diminished in a slight degree, the heaviest and largest of the materials only will find it insufficient for their further transport, and those only will be deposited; another diminution of velocity will leave behind the matter standing next in the descending scale, as to magnitude and weight; and so on, until at last the waters bear up fine particles alone.

Section 44. In a channel nearly direct, uniformly enlarging in section, and lessening in velocity, the operation would be nearly as just described. But in all rivers there are disturbing causes of this regularity; and amongst these are chiefly worthy of notice the branching off of the channel around islands, and sudden enlargement of the bed; both taking off, to be dropped in the more quiet places, much of the lighter matter mixed with the water. We may presume that the transported matter, instead of composing a stratum of several feet in thickness, just below the termination of the artificial works, will be spread, in a thin layer, over many miles in length.

Section 45. Mr. Genet mentions a shoal about one mile below New Baltimore of 11.80 feet water in the channel, which we find exhibited on Mr. Randal's map.

Mr. Clinton's survey, made twelve years after Mr. Randal's, shows a shoal in the same position, though considerably deepened and changed in form. We do not think it probable that this shoal, or any other in the channel, will be increased by the transported matters. Shoals are formed, not simply because the waters are turbid, but because they are both turbid and slow; and there is no reason to believe that the current along this part of the river will be diminished. Should it nevertheless occur that particles too heavy for the current, at the shoal, were conveyed thus far, it would be easy to contract the channel to the degree necessary to cause their removal.

Section 46. But it is of the first importance to mention here, that in calculating the quantity used above Mr. Randal took an extreme low water, a level 3.30 feet below the average low water recorded in his tables, and then supposed the excavation to be carried nine feet below this level; in other words, 12.30 feet below his registered average low water. This is taking an extravagantly low level, as will be seen by using it in Mr. Genet's canal. That canal, designed for ships, would, in this condition of the water, have but 11.80 feet draught at its lowest mouth, while it would have upwards of fifteen feet at the average low water. A more reasonable supposition, and one that, it is believed, would perfectly answer all the requirements of the trade, is to consider the river as requiring ten feet depth at common low water. This well accords with the several canal projects, and will agree, very nearly, with the proposal of Mr. Clinton, to give nine feet at very low tides. Now, taking this as the depth, and using Mr. Clinton's calculations of the quantity to be dredged, it is found that to obtain a channel of 660 feet wide, (the width given by Mr. Randal,) will call for the removal of about 2,000,000 cubic yards, or less than one-fourth of the before stated quantity of 8,221,674 cubic yards. This quantity would, on the supposition here made, (Section 42,) if deposited in a bed of 6.45 feet deep, extend less than two miles below New Baltimore; if spread along the bed for eight miles, would raise it but 1.60 feet; and if diffused uniformly over the bottom as far as Hudson, would cause an elevation thereof about six inches.

Section 47. If, now, the better to compare this operation with the canal projects, we take a breadth of 300 feet for the channel, again using Mr. Clinton's calculations, the quantity to be removed would be less than 1,000,000 cubic yards; calling it 1,000,000, it would barely fill the basin in front of New Baltimore 6.45 feet high; would raise the bed 10 inches for a length of 8 miles, or about three inches for a length of 20 miles.

Section 48. It would appear, from the above statement, that the quantity of 2,000,000 cubic yards might be left to the disposal of the floods, with the probability that no harm would result therefrom to the lower portion of the river; and, of course, the probability would be the greater with the lesser quantity of 1,000,000 cubic yards.

Section 49. But it may, after all, be the part of prudence, in a matter of such consequence, to guard against even improbable contingencies, to secure from possible danger a portion of the river which nature has left in a condition admirably adapted to the purposes of trade; and in order to this, to resort for the excavation of the channel, in part, if not wholly, to the dredging machine; leaving to floods, restrained by dikes, only the preservation of the requisite depths.

Section 50. With the observation that, in the progress of operations, it may be advisable to experiment upon the first mode of excavation, carefully watching effects, and in certain situations to apply both, we proceed to a more particular description of the works we would recommend for the improvement of the river navigation, reserving for the estimates a statement of the expense of dredging.

Section 51. As to the river from Waterford to the sloop lock, just above Troy, the board recommend the improvements suggested by Mr. De Witt Clinton—(See our estimate and his report.)

Section 52. Beginning at the foot of the sloop lock, we recommend, in order to prevent the water which falls over the dam from washing gravel into the channel, a low dike, to extend from the "slide" to the head of Hay island. The dike will be 2,230 feet long.

Section 53. A dike, 3,900 feet long, extending from the upper part of Port Schuyler docks to the head of Breaker's island, is proposed, in order to the removal of Washington and Van Buren bars.

Section 54. A dam from the west shore to Cuyler's island, 260 feet long, and another to Patroon's island, 120 feet long, together with the protection of the shores of these and Breaker's and Hillhouse's islands, on the channel side, will, it is thought, be sufficient to open the channel to Base island.

Section 55. The old dike, from the head of Base island to the east shore, to be raised; the face of this island protected, and a dike of 2,350 feet in length extended downward from the lower part of Patroon's island, with a view to the removal of the "Fish-house shoal," and to the turning the current upon the eastern shore; and, as auxiliary to the same effect, building a dam, 700 feet long, from the west shore, to Patroon's lower island, and securing the face of said island.

Section 56. Supposing the passage behind Waterloo's island already closed, a dam of 200 feet in length is proposed to connect this island with Small island, and a dike of 1,700 feet in length to run out in front of Small island, turning the mass of water eastward.

Section 57. The removal of the extensive shoal which includes the "Upper Overslaugh" and "Overslaugh bar" may be accomplished, it is thought, by the following works on the west side of the channel, viz: a dam 300 feet long behind Bogert's island; protecting works along the faces of Bogert's and Beacon islands; a dike of 3,600 feet in length from Bogert's to Beacon island; a dike above Bogert's island 1,400 feet long, and one below Beacon island 2,900 feet long, aided by the following works on the east side, namely: a dike 1,400 feet long running downward past the mouth of Papscaee creek; works of security along the face of Papscaee island, and cutting off 700 feet from the outer end of Van Wie's pier.

Section 58. "Austin's Rock" may possibly require removal.

Section 59. As Van Wie's Point will turn the current against Papscaee island, the shore of the latter, for some distance above and below the mouth of Cooper's kill, will require protection.

Section 60. That the channel may have a suitable direction below Papscaee island, a dike, 3,200 feet long, should be extended downward from near the lower end of the island, and to prevent any portion of the flood passing behind this island, Papscaee creek will require a dam of 130 feet in length.

Section 61. Together with a dam 450 feet in length from Smith's island to the main, a dike 850 feet long from this island to Cow island, and protecting works along the faces of these islands, it is proposed to run a dike from the west shore, above Vluaman's kill, in a direction proper to bend the current towards the Castleton docks. This dike will be 3,400 feet long, and will require that 700 feet be taken off Winnie's pier.

Section 62. It is proposed to throw a dike 1,600 feet long across the upper mouth of Schodack creek to protect the shore above it for some distance, and below it, along the face of Schodack island, to the entrance to "Hell Gate," and to unite Shad island with the west shore by a dam 250 feet in length.

Section 63. That the Hell Gate passage, to the village of Schodack, may be kept open, and at the same time to turn the current from that passage, a dike 2,200 feet long has been drawn from Schodack island in such a direction as to throw the mass of waters outside of the head of Mull's Plat island.

Section 64. A dam of 200 feet in length being thrown from Mull's Plat island to Lower Schodack island; a dike 1,300 feet long from Mull's Plat island to Mull's island; two short dikes, making, together, 600 feet in length, across openings in this last island; a dike 3,600 feet long from Mull's island to P. Ten Eyck's island, and a dike 700 feet long from the latter to Houghtaling's island; the protection of the faces of Mull's Platt island, Mull's island, and P. Ten Eyck's island with suitable works, will complete the structures deemed necessary.

Section 65. All the structures above enumerated have been drawn conspicuously on the map herewith, in order to show the application to the case before us of the means on which alone, as the board think, reliance can be placed for maintaining a good depth of water. It will be seen, on consulting the map, that with works of no great length, as regards the length of river, the great body of water may be confined to comparatively narrow limits, and be made to follow a given track; and it is evident that the depth of water coursing between these limits in times of floods, and consequently the abrading force of the current upon the bottom, can be regulated by the height given to the dams, the dikes, and the works protecting the shores.

Section 66. It was before stated (section 33) that accurate observation as to the height of floods, their slope, velocity, &c., and as to the nature of the bottom, is indispensable, not only to a correct determination of the proportion of flood which it will be proper to keep within the restricted limits, but also to the adjustment of the several breadths of the channel. Until such observations shall have been made, neither the exact forms, lengths, nor heights of these structures can be determined; nor, indeed, until the effect on the flood of removing masses of ice shall have been carefully noted, and much information collected on this last point, can the number and situation of these works be regarded as fully settled.

Section 67. It is necessary, however, to make suppositions of some sort, as to all these matters, in order to obtain our estimates.

The suppositions as to situation and extent of the works are shown on the map; and we have taken for their altitudes 9 feet above lowest water for those between Troy and Albany; 8 feet for those between

Albany and Van Wie's Point; and 7 feet for those below this point. All the dams and dikes being calculated at 12 feet in breadth at bottom.

Section 68. In our state of uncertainty as to the extent of which ice may endanger the structures, we have included in our estimate the number of "ice-breakers" recommended by Mr. Clinton, and have supposed them to be triangular pieces, having their upper surface so inclined that the ice must pass over them and be broken as it falls.

Section 69. We have also taken into our estimates, at his prices, the number of monuments and beacon-lights supposed by Mr. Clinton to be necessary in aid of the navigation of the river

Section 70. Cost of a section of dike or dam 30 feet long, 12 feet broad at bottom, 10 feet at top, and 13 feet high:

5 piles, at \$2 each.....	\$10 00
750 feet of square timber, at 10 cents.....	75 00
11 ties, at 90 cents.....	9 90
Tree-nails and bolts.....	7 80
300 feet of 3-inch planks, at \$36 per M.....	10 80
Spikes.....	4 00
Fascines under pier.....	22 50
100 yards of stone for filling, at 60 cents.....	60 00
55 yards gravel and sand for filling, at 20 cents.....	11 00
390 feet of face workmanship, at 8 cents.....	31 20
Contingencies, 10 per cent. on \$242 20.....	24 22
	<hr/>
	266 42
	<hr/>

1 yard will cost \$26 64; 1 running foot will cost \$8 88; 1 cubic foot will cost 62 cents.

For a pier 14 feet high, one running foot will cost \$9 62½.

For a pier 14 feet high, one running foot will cost \$8 13½.

Section 71. Cost of an ice-breaker, consisting of an equilateral triangular pier, 22 feet side, having a slope on top of 8 feet, its greatest height 12 above low water, and standing in an average depth of water of 10 feet:

1,532 feet of timber, at 10 cents.....	\$155 20
66 ties, at 70 cents.....	46 20
Iron bolts and tree-nails.....	66 00
Fascines, 44 feet, at 75 cents.....	33 00
1,376 feet of face workmanship, at 8 cents.....	110 00
80 yards of stone filling, at \$1.....	80 00
16 yards of gravel, at 20 cents.....	3 20
209 feet of 4-inch plank, at \$48 per M.....	10 04
Spikes.....	3 00
Contingencies, 10 per cent. on \$506 72.....	50 67
	<hr/>
	557 39
	<hr/>

Estimate (A) of the cost of all proposed works from Waterford to New Baltimore, including the dredging a channel 660 feet wide from Troy to New Baltimore.

Section 72. From Waterford to Troy:

To 2,230 running feet of pier, at \$8 88.....	\$21, 802 40

Waterford to Troy	\$30, 942 69
Troy to Albany	265, 343 84
Albany to New Baltimore	523, 347 57
Grand total	<u>819, 634 10</u>

Estimate (B) of the cost of all proposed works from Waterford to New Baltimore, including the dredging a channel 300 feet wide from Troy to New Baltimore.

Section 76. From Waterford to Troy, same as estimate A. \$30, 942 69

Section 77. From Troy to the lower part of Albany:

To dikes and dams, protecting shores, monuments and lights, and ice-breakers, same as estimate A	106, 553 93½
481,732 cubic yards of dredging, at 13½ cents	65, 033 82½
Contingencies, 10 per cent	17, 156 77
Total, Troy to Albany	<u>188, 724 53</u>

Section 78. Albany to New Baltimore:

To dikes and dams, protecting shores, monuments and lights, and ice-breakers, &c., same as estimate A	340, 458 27
518,268 cubic yards of dredging, at 13½ cents	69, 966 18
Contingencies, 10 per cent	41, 042 44
Total, Albany to New Baltimore	<u>451, 466 89</u>

Section 79. Recapitulation.

From Waterford to Troy	30, 942 69
From Troy to Albany	188, 724 53
From Albany to New Baltimore	451, 466 89
Grand total	<u>671, 134 11</u>

Estimate (C) of the cost of all proposed works from Waterford to New Baltimore, excluding all dredging below Troy.

Section 80. From Waterford to Troy, same as estimate A. \$30, 942 69

Section 81. From Troy to lower part of Albany:

To dikes and dams, protecting shores, monuments and lights, and ice-breakers, &c., same as estimate A	106, 533 93½
Contingencies, 10 per cent	10, 653 39½
Total, Troy to Albany	<u>117, 187 33</u>

Section 82. Albany to New Baltimore:

To dikes and dams, protecting shores, monuments and lights, and ice-breakers, &c., same as estimate A	340, 458 27
Contingencies, 10 per cent	34, 045 82
Total, Albany to New Baltimore	<u>374, 504 09</u>

Section 83. Recapitulation.

From Waterford to Troy	30, 942 69
From Troy to Albany	117, 187 33
From Albany to New Baltimore	374, 504 09
Grand total	<u>522, 634 11</u>

Section 84. The cost of dredging a channel 660 feet wide from Troy to New Baltimore, at 13½ cents per cubic yard, and allowing 10 per cent. for contingencies, is, according to the above estimate, (A,) \$279,000; and the cost of dredging a channel 300 feet wide for the same distance, at the same price, and with the same rate of contingent allowance, is, according to the preceding estimate, (B,) \$148,500.

Section 85. As full nine feet water can now be carried up the river as high as Van Wie's Point, (according to Mr. Clinton's map,) it is thought advisable to present a separate estimate of the expense of improving the river above that point, exclusive of dredging below Troy.

Estimate (D) of the cost of all the proposed works from Waterford to Van Wie's Point, exclusive of dredging below Troy.

Section 86. From Waterford to Troy, same as estimate A. \$30, 942 69

Section 87. From Troy to Albany, same as estimate C. 117, 187 33

Section 88. From Albany to Van Wie's Point:

To 11, 630 running feet of dikes and dams, at \$8 88.....	\$103, 274 40
Protecting shores, 14,930 running feet, at \$2.....	29, 860 00
Six monuments and lights, at \$125.....	750 00
Four ice-breakers, at \$557 39.....	2, 229 56
Cutting off Van Wie's pier, 700 feet, at \$2.....	1, 400 00
Contingencies 10 per cent.....	13, 751 39

Total, from Albany to Van Wie's Point..... 151, 265 35

Section 89. Recapitulation.

From Waterford to Troy.....	30, 942 69
From Troy to Albany.....	117, 187 33
From Albany to Van Wie's Point.....	151, 265 35

Grand total..... 299, 395 37

Section 90. In order to bring all the preceding estimates for the improvement of the river into one view we here present

A GENERAL RECAPITULATION.

Estimate A, improvement of the river from Waterford to New Baltimore, including a dredged channel below Troy of 660 feet in width, \$819,634 10.

Estimate B, improvement of the river from Waterford to New Baltimore, including a dredged channel below Troy of 300 feet in width, \$671,134 11.

Estimate C, improvement of the river from Waterford to New Baltimore, not including any dredging below Troy, \$522,634 11.

Estimate D, improvement of the river from Waterford to Van Wie's Point, not including any dredging below Troy, \$299,395 37.

Section 91. With a view now to compare the expense of the canal projects, as before estimated, (Sec. 28,) with the probable expense of improving the bed of the river it will be unnecessary to take more than the cost of the river improvements below Albany, because the projected canals would reach no higher than that city.

It appears from estimate A that with a channel dredged to the width of 660 feet and 10 feet deep, the cost of the river improvement below Albany would be \$523,348; and this sum is found to be (Sec. 28) \$679,017 less than the estimate for a ship canal 109 feet wide; \$287,430 less than a canal 109 feet wide and 7 feet deep; \$411,992 less than a canal 109 feet wide and 10 feet deep; \$1,000,894 less than a canal 200 feet wide and 10 feet deep; and \$1,651,292 less than a canal 300 feet wide and 10 feet deep.

Section 92. Renewing the expression of doubt as to their ability fully to master the important subject committed to them, the board, in conclusion, recommend that the attempt to improve the navigation of the Hudson be confined to the bed of the river; and that the system of works should be of the kind suggested in the preceding remarks, being applied under the direction of a competent person, and being liable to such modification as careful observation during the process of operation shall show to be necessary or expedient.

All which is respectfully submitted.

II.

Report on the improvements and repairs of the harbors of Chester, Marcus Hook, Newcastle, and Port Penn, on the Delaware river.

PHILADELPHIA, October, 1835.

These harbors were constructed by the States of Pennsylvania and Delaware previous to the year 1789, for the purpose of rendering the navigation of the Delaware "easy and safe," and as a protection to vessels against the floating ice in the winter season. They were ceded to the United States in 1789 and 1827. The preservation and repair of these harbors are required by the tenor of the acts of Pennsylvania and Delaware ceding them to the United States, and the necessity for places of security for vessels navigating the river and bay in the winter season.

An appropriation was made by Congress in 1829 for the repair of these harbors, about which time it was thought advisable to connect the detached piers, then forming the several harbors, by wharf-work connecting the outer piers with the main land, and thus forming a basin enclosed on three sides, two of which were perpendicular to the thread of the current, intending to remove the accumulation of mud from within these basins by a steam dredging machine.

In 1830 an appropriation was made for the purchase and putting in operation this dredging apparatus. In 1831 an additional appropriation was made for continuing this operation, as also in 1832 and 1833.

In the spring of 1833 the superintendence of these harbors was confided to the undersigned, at which period the steam dredging machine was in operation at Marcus Hook excavating the earth from within the enclosed harbor formed at that place. On September 30 of that year I showed in my annual report that 47,686 cubic yards of earth had been removed up to that date, and 15,369 yards during the year

ending that day, affording a "safe and secure" anchorage for about twenty vessels at Marcus Hook; and that some progress had been made in repairing one of the piers of this harbor, using stone for all that part above low water.

It was stated in the report for that year that to persevere upon the plan heretofore pursued (of enclosed basins and removing the deposit annually with dredging apparatus) is not deemed either advantageous towards effecting the desired object, or, when accomplished, answering a permanent good.

The estimates for the ensuing year were based upon a new system of operation, and the only one calculated, in my opinion, to attain the object in view; as also upon the plan, then in operation, of continuing the dredging apparatus within the enclosed harbors.

In January, 1834, a memoir was prepared and forwarded to the Engineer department, assigning the reasons for recommending an abandonment of the dredging system, and the construction of new piers in advance of the old ones, at each of the harbors, except Chester, as the only means of making a place of safety on the Delaware for vessels in the winter season, and stating that no harbor then existed to protect vessels against the ice, except at Chester, nor could not until new piers were constructed. The appropriation for the year 1834 was not made until July, and was the minimum sum stated in the estimate.

The Engineer department, being satisfied that the plan of dredging was useless, authorized its abandonment, and that the funds available should be applied towards the construction of such work as formed part of the system recommended by me. In furtherance of this plan, the work of the season was confined to opening the sluice-ways at Marcus Hook, between the piers, to prevent an eddy and further deposit within the harbor, and to the repairs of the southeastern pier, the lower side of which had given way below the water level. To effect this, a new pier was sunk immediately below and alongside of the defective one, the intermediate space filled with large masses of stone, and from the low-water mark building up the whole pier with blocks of stone bolted together with copper.

In the annual estimates for the succeeding year, 1835, (dated 30th September, 1834,) it is stated this estimate is for the construction of a new pier at Marcus Hook; any attempt to clear out the old harbors by dredging machines being worse than useless, as, from the formation of this (Marcus Hook) and the other harbors, the deposit from the river waters must very soon fill them again; and that my views in relation to these harbors were expressed fully in the memoir for the previous year, and had undergone no change, but rather strengthened by the observations of the year; and further, that no harbors can exist (except at Chester) to guard the commerce of the Delaware against ice, until new piers are constructed; and that I had caused the dredging machine that I found in operation on being assigned to this duty to be laid up, and its use abandoned; and further, that the limited means appropriated for the year had been applied to repairing the outer pier at Marcus Hook with stone masonry from low-water mark up, as a part of the system necessary in the formation of a harbor by the construction of new piers, and that two of these piers were necessary at Marcus Hook and Newcastle: Whether Port Penn was susceptible of a like construction remained to be ascertained after seeing the surveys ordered for that purpose.

The estimates for the year, as before observed, were based upon the construction of new piers, and gave as the maximum the sum necessary for perfecting the harbor of Marcus Hook on this system; the minimum being to construct one pier only, leaving the second for a succeeding year.

In August, 1834, a report was made to the Engineer department, called for by an order of the 21st of that month, which stated "that unless the appropriations are made with a view of reconstructing these harbors by building new piers, I cannot recommend the partial and limited appropriations, with which I can accomplish very little to the advantage of the public interest."

The appropriation for the year 1835 was made available in April, and proved to be less than half of the sum necessary to construct *one pier*.

Since the last annual statement the plan has been persevered in of applying these limited means to repairing the outer piers of these harbors with stone from the low-water mark up, and cutting away the impediments to a free passage of the tides through the harbor.

At Marcus Hook the southeastern pier has been repaired on this plan, and the two sluice-ways between the outer piers have been removed, the effect of which has been not only to prevent any further deposit, but has caused, by the action of the tides, the removal of much of the mud from within this harbor, lying above the level of the bottom of the openings made between the piers, serving as a preservation of the harbor more against future injury than any good that the commerce of the Delaware can derive from it in its present state.

The limited appropriation of the year could not be applied at Marcus Hook in effecting any useful object whatever. The only manner in which it could be applied was at Newcastle, in carrying into effect so much of the plan recommended, as it would accomplish in the removal of the obstructions to the free passage of the current through this harbor and between the piers, and repairing the northeastern pier with large stone from low water up.

In furtherance of this application of the available means, a sluice-way has been partially opened, the northeastern pier cut down to low-water mark, a foundation prepared thereon for laying the masses of stone for its reconstruction, and stone purchased for raising the work four feet high; after accomplishing which, the funds will be so nearly absorbed as to render any further progress impracticable.

In submitting estimates for continuing the improvements of these harbors, I have based them upon the plan recommended from the first moment of addressing you in relation to them; the propriety of pursuing which is strengthened and confirmed in my estimation by every year's observation, as the only means of gaining and securing a "safe and easy" navigation of the Delaware, as required by the acts of Delaware and Pennsylvania ceding these harbors. I have accompanied the annual estimates with a general plan of the harbor of Newcastle, exhibiting its condition, the works proposed for its improvement, with a detailed plan of the projected works, and another of the works now under construction.

In conclusion, I must again recall to your recollection that there is no harbor for the protection of vessels navigating the Delaware in the winter, except at Chester, and that I cannot make any of the harbors safe at such seasons with the small sums heretofore appropriated, and again observe that it is better not to appropriate these small sums at all, as with them the object in view cannot be attained.

All of which is respectfully submitted.

RICHARD DELAFIELD, *Captain of Engineers.*

Brigadier General CHARLES GRATIOT, *Chief Engineer.*

I.

PORTSMOUTH, *Ocracoke Inlet, September 30, 1835.*

SIR: The navigation of Ocracoke inlet, on the state of which, as connected with the operations for its improvement, I am about to report, is probably more remarkable than that of any inlet in the United States. Being the outlet for all the waters of North Carolina, excepting the Cape Fear and its tributaries, this inlet partakes of the character of the mouth of a river; and, connecting the vast waters of the Albemarle, Croatan, Roanoke, and Pamlico sounds, with the ocean, its character is also that of straits connecting two seas. The distance between the points of the inlet is less than two miles, and immediately on passing these points the land diverges at a very great angle. The ebb tide from within, pressing with force through this narrow pass, on debouching into the ocean, forms by its deposit what is called the bar; and in like manner the flood tide from the ocean, forcing its way through the inlet, forms by its deposit a large body of shoal within. From causes easily seen, the tides have excavated small channels through these shoals, all of which, however, have obstructions in them. To avoid confusion, it is necessary to understand that all the obstructions in these different channels have names. The obstruction at the head of Wallace's channel is called the Flounder slue.

Some years since, when the inlet was first examined with a view to the improvement of its navigation, the passage by the Flounder slue and Wallace's channel was selected as the one on which, for many reasons, it was best to operate; and this selection, all the officers who have since had charge of the works here have approved. It was recommended by the engineer that the Flounder slue, at that time the only obstruction to the passage by Wallace's channel should be excavated to a certain depth by dredging boats; and this recommendation being approved of by Congress, appropriations were made for carrying it into effect. When the operations were commenced but five and a half feet water could be carried through the slue. At the beginning of this year, as shown by drawing No. 2, a passage existed 120 feet wide and seven and a half feet deep, at low water, in the shoalest part. It had for a year previous become the principal channel for vessels from Pamlico bay and Neuse river. During the present year, as shown by drawing No. 3, the passage, with the same average width, has been increased in depth to eight and a half feet at low water on the shoalest part. Since the date of the last report, by one boat 31,683 cubic yards have been excavated and removed to a distance of 750 yards; of these 26,443 cubic yards have been excavated and removed since the 22d of April, the date on which the work commenced this year. By referring to the last year's report of the superintending engineer, it will be seen that at that time a new obstruction had been formed, threatening to render useless all that had been done on the Flounder slue. The mouth of Wallace's channel—that is, the point where this channel debouches into the deep water of the inlet—had become much shoaler. But little change has taken place in the depth of water at this mouth since the date of Lieutenant Dutton's report, as vessels drawing eight feet still pass out at high water. The question then presented to me on my arrival here was, whether, by any means commensurate with the end, this mouth might be permanently improved. To obtain data for the solution of this question a minute survey of the lower part of the channel was made.

Drawings Nos. 4 and 5 exhibit the results of this survey. From these it will be seen that to the east and north of Dry Shoal Point (the southern point of the inlet) lies a body of shoal called the Shark shoal, extending to the eastward as far as Amity shoal, and to the northward about 850 yards. The flood tide passing over this shoal between Amity shoal and Dry Shoal Point has a tendency to extend the shoal to the northward; but the main ebb tide of the inlet passing around the northwest point of Amity shoal counteracts this tendency. After passing over the Shark shoal, the flood tide, to supply the southern part of the inlet, inclining towards the south, excavates Beacon Island slue. At its mouth this slue is quite broad; but from the gradual diminution of the volume of water, caused by its flowing off laterally, this slue gradually contracts until at length, opposite Ayres's rock, it heads. The ebb tide in Wallace's channel, which is the current governing the formation of the lower part of this channel, after passing by Ayres's rock, runs close to the southern shore, excavating as far as the southern point of the inlet a deep channel, and leaving between it and Beacon Island slue and the roads a strip of shoal varying in width. After passing the southern point of the inlet, Wallace's channel spreads its waters in every direction upon the Shark shoal and ceases to exist.

The present mouth of the channel is nothing more than a slight deepening across the strip of shoal spoken of, caused by the water reflected from the southern shore during the prevalence of certain winds. Generally both the flood and ebb tides run across this mouth.

To turn the course of the ebb tide in Wallace's channel by means of a jettee over the strip of shoal separating this channel from Beacon Island slue and the roads is the course which I propose in order to form a good mouth. The positions which present themselves for the location of this jettee are three—at the present mouth, at a point designated on the drawing, and at Ayres's rock. At Ayres's rock the jettee should dam up the channel and turn the current into Beacon Island slue. Of the three positions, I prefer the second. A jettee there would, besides other great advantages, be less expensive and more permanent than one in the first position; and the objections to the last position are, that, from the deep water there, a jettee would be very expensive, and that while being constructed it would prevent the passage of vessels through Wallace's channel.

A jettee such as those constructed at Fort Macon, in a bottom exactly like the bottom here, and when the causes operating against their permanency were very similar to those we may expect at this place, would be sufficient, and perhaps preferable to any other. I have shown on the drawing the form and dimensions of the jettee sufficient, in my opinion, to form in a short time a mouth much better than the present one, and ere long, I think, the deep water to the south of the jettee would rent itself through this mouth when the depth would certainly be increased to 18 or 20 feet.

There is one fact in the history of this navigation which has so important a bearing on the question as to what would be the effect of the proposed jettee that I will mention it here.

About the year 1818 the mouth of Wallace's channel was in a worse condition than at present. At that time a shoal, dry at high water, was formed on the Shark shoal, a short distance to the eastward of the projected jettee. Immediately after the formation of this shoal, the ebb tide of the channel excavated a mouth with a depth of fifteen feet water, occupying, with respect to the shoal, the same relative position it is supposed the mouth of the channel will have with respect to the jettee proposed. The deep water near the shore took the direction it is supposed it will in this case; and, in every respect, the changes made were such as it is supposed will be caused by the proposed jettee.

I.

PORTSMOUTH, Ocracoke Inlet, September 30, 1835.

SIR: The navigation of Ocracoke inlet, on the state of which, as connected with the operations for its improvement, I am about to report, is probably more remarkable than that of any inlet in the United States. Being the outlet for all the waters of North Carolina, excepting the Cape Fear and its tributaries, this inlet partakes of the character of the mouth of a river; and, connecting the vast waters of the Albemarle, Croatan, Roanoke, and Pamlico sounds, with the ocean, its character is also that of straits connecting two seas. The distance between the points of the inlet is less than two miles, and immediately on passing these points the land diverges at a very great angle. The ebb tide from within, pressing with force through this narrow pass, on debouching into the ocean, forms by its deposit what is called the bar; and in like manner the flood tide from the ocean, forcing its way through the inlet, forms by its deposit a large body of shoal within. From causes easily seen, the tides have excavated small channels through these shoals, all of which, however, have obstructions in them. To avoid confusion, it is necessary to understand that all the obstructions in these different channels have names. The obstruction at the head of Wallace's channel is called the Flounder slue.

Some years since, when the inlet was first examined with a view to the improvement of its navigation, the passage by the Flounder slue and Wallace's channel was selected as the one on which, for many reasons, it was best to operate; and this selection, all the officers who have since had charge of the works here have approved. It was recommended by the engineer that the Flounder slue, at that time the only obstruction to the passage by Wallace's channel should be excavated to a certain depth by dredging boats; and this recommendation being approved of by Congress, appropriations were made for carrying it into effect. When the operations were commenced but five and a half feet water could be carried through the slue. At the beginning of this year, as shown by drawing No. 2, a passage existed 120 feet wide and seven and a half feet deep, at low water, in the shoalest part. It had for a year previous become the principal channel for vessels from Pamlico bay and Neuse river. During the present year, as shown by drawing No. 3, the passage, with the same average width, has been increased in depth to eight and a half feet at low water on the shoalest part. Since the date of the last report, by one boat 31,683 cubic yards have been excavated and removed to a distance of 750 yards; of these 26,443 cubic yards have been excavated and removed since the 22d of April, the date on which the work commenced this year. By referring to the last year's report of the superintending engineer, it will be seen that at that time a new obstruction had been formed, threatening to render useless all that had been done on the Flounder slue. The mouth of Wallace's channel—that is, the point where this channel debouches into the deep water of the inlet—had become much shoaler. But little change has taken place in the depth of water at this mouth since the date of Lieutenant Dutton's report, as vessels drawing eight feet still pass out at high water. The question then presented to me on my arrival here was, whether, by any means commensurate with the end, this mouth might be permanently improved. To obtain data for the solution of this question a minute survey of the lower part of the channel was made.

Drawings Nos. 4 and 5 exhibit the results of this survey. From these it will be seen that to the east and north of Dry Shoal Point (the southern point of the inlet) lies a body of shoal called the Shark shoal, extending to the eastward as far as Amity shoal, and to the northward about 850 yards. The flood tide passing over this shoal between Amity shoal and Dry Shoal Point has a tendency to extend the shoal to the northward; but the main ebb tide of the inlet passing around the northwest point of Amity shoal counteracts this tendency. After passing over the Shark shoal, the flood tide, to supply the southern part of the inlet, inclining towards the south, excavates Beacon Island slue. At its mouth this slue is quite broad; but from the gradual diminution of the volume of water, caused by its flowing off laterally, this slue gradually contracts until at length, opposite Ayres's rock, it heads. The ebb tide in Wallace's channel, which is the current governing the formation of the lower part of this channel, after passing by Ayres's rock, runs close to the southern shore, excavating as far as the southern point of the inlet a deep channel, and leaving between it and Beacon Island slue and the roads a strip of shoal varying in width. After passing the southern point of the inlet, Wallace's channel spreads its waters in every direction upon the Shark shoal and ceases to exist.

The present mouth of the channel is nothing more than a slight deepening across the strip of shoal spoken of, caused by the water reflected from the southern shore during the prevalence of certain winds. Generally both the flood and ebb tides run across this mouth.

To turn the course of the ebb tide in Wallace's channel by means of a jettee over the strip of shoal separating this channel from Beacon Island slue and the roads is the course which I propose in order to form a good mouth. The positions which present themselves for the location of this jettee are three—at the present mouth, at a point designated on the drawing, and at Ayres's rock. At Ayres's rock the jettee should dam up the channel and turn the current into Beacon Island slue. Of the three positions, I prefer the second. A jettee there would, besides other great advantages, be less expensive and more permanent than one in the first position; and the objections to the last position are, that, from the deep water there, a jettee would be very expensive, and that while being constructed it would prevent the passage of vessels through Wallace's channel.

A jettee such as those constructed at Fort Macon, in a bottom exactly like the bottom here, and when the causes operating against their permanency were very similar to those we may expect at this place, would be sufficient, and perhaps preferable to any other. I have shown on the drawing the form and dimensions of the jettee sufficient, in my opinion, to form in a short time a mouth much better than the present one, and ere long, I think, the deep water to the south of the jettee would rent itself through this mouth when the depth would certainly be increased to 18 or 20 feet.

There is one fact in the history of this navigation which has so important a bearing on the question as to what would be the effect of the proposed jettee that I will mention it here.

About the year 1818 the mouth of Wallace's channel was in a worse condition than at present. At that time a shoal, dry at high water, was formed on the Shark shoal, a short distance to the eastward of the projected jettee. Immediately after the formation of this shoal, the ebb tide of the channel excavated a mouth with a depth of fifteen feet water, occupying, with respect to the shoal, the same relative position it is supposed the mouth of the channel will have with respect to the jettee proposed. The deep water near the shore took the direction it is supposed it will in this case; and, in every respect, the changes made were such as it is supposed will be caused by the proposed jettee.

This shoal lasted eight or ten years; and while it lasted the mouth of the channel was from twelve to fifteen feet deep. At length, not being protected, it was washed away; and from that period the mouth of the channel began to deteriorate. This shoal, with the mouth of the channel, will be found in Colonel Abert's map, made in 1821.

When the channel between the jettee and the southern shore shall have become shoaler, the jettee may *then*, at a little expense, be continued to the southern shore. As a consequence of this continuation, there is but little doubt (so rapidly in this navigation do shoals form when there are causes for their formation) that, within one year after the completion of the jettee, a dry shoal, which will be a continuation of the Dry Shoal Point, will be formed to the northern end of the jettee. It is to be expected that, in a few years, that part of the jettee above the sand will be destroyed by worms; but the part in the sand, which will be imperishable, will protect the shoal from being washed away by the ebb tide, and, by a little attention and expense, the shoal might be prevented from being washed away by any cause. The obstructions in the mouths of the channels at this inlet, as respects the causes of their formation, may be classed under three heads: 1st, where a channel debouches upon a shoal, the force of the current being lost by the sudden expansion, of course the depth can be no longer maintained; 2d, where the force of one tide being sufficient to keep open a good mouth, the direction of the other tide is directly across this mouth, so that, while one tide excavates, the other fills up; and, finally, when the obstructions are caused by the meeting of the two currents, forming an eddy across the mouth of one channel. It will be seen, by an inspection of the drawing, that none of these causes operate upon the position of the proposed mouth. It debouches into deep water; the two tides run in the direction of what will be the channel; there is no cross current; it is retired within the inlet, and, therefore, comparatively safe from the disturbing action of storms; and I must add that, judging from authentic accounts of the navigation for the last forty years, I do not see that any changes may be expected which will operate against the permanency of this mouth. Considering all these circumstances, I think there are just grounds for supposing that, from the course proposed, the continuation of the Dry Shoal Point will lie in such a position that the mouth of Wallace's channel would be permanent, and good for eighteen or twenty feet water.

Statistical accounts, showing the importance of a passage here to the interests of North Carolina, have been so often presented to the department that it would be superfluous in me to repeat them.

To return now to Flounder slue. At Shell Castle, the flowing waters, before spread over a large space, become concentrated; and, above this point, the flood tide becomes the current governing the form of the channel.

After passing obliquely across the mouth of the Flounder slue, this current, by expansion, gradually loses its force, and its deposit forms the body of shoal at the head of Wallace's channel. From the history of the Flounder slue, from a comparison of its state at the end of last year, as presented by the drawing of Lieutenant Dutton, and its state at the commencement of this year, and from examinations made during the year, I am inclined to the opinion that the flood, passing across the lower mouth, has a tendency to close it up. Owing, however, to the distance of this point from the jaws of the inlet, the deposit is made so slowly that a small annual expense, viz: sufficient to keep in operation a dredging boat six weeks in the year, would be sufficient to keep this slue open. I include this item in the estimate for next year, supposing it most prudent to suspend the operations for carrying the whole slue to the depth first contemplated till the effect of the jettee on the mouth of Wallace's channel be observed.

My time has been so exclusively taken up in examinations of the southern passage, that I have not been able to make any examinations of Teach's Hole or Blair's channel. A passage by either of these channels would be more convenient for the northern counties than the southern passage. My impression is that they might be improved; but, were either of them put in competition with the southern passage, I would give a decided preference to the latter.

Estimate of amount required, for the year 1836, for the purpose of improving the navigation at Ocracoke inlet North Carolina.

26,100 running feet of pine logs, at four cents per foot.....	\$1,044 00
182 tons of brush, at \$4 50 per ton, say.....	820 00
4,900 days' labor, at sixty-five cents per day.....	3,185 00
900 pounds spikes and nails, at 12½ cents per pound.....	112 50
For carpentry and lumber.....	100 00
Three overseers, for four months, at \$140 per month.....	560 00
Cost of employing dredging boat one and a half month.....	1,600 00
For securing and taking care of the dredging boat for the remainder of the year, at \$40 per month.....	420 00
For clerk and office rent for five months, at \$35.....	175 00
	8,016 50
Unforeseen and casualties, ten per cent. on estimated cost.....	801 50
	8,818 00

Respectfully submitted to the chief engineer.

ALEX. J. SWIFT, *Second Lieutenant of Engineers.*

General C. GRANT, *Chief Engineer, Washington.*

K.

Extract from a report made by Lieutenant Jos. K. F. Mansfield and Lieutenant John H. Winder to the chief engineer, dated 15th October, 1835.

CAPE FEAR RIVER.

* * * We have inspected the operations and improvements of the Cape Fear river, and find it generally admitted that the navigation has been materially improved, as must inevitably be the case, to a still greater degree, if the jetties are kept up and the plan persevered in. On the west side of

the river the jetties above Town creek have been completed, and generally in good order. On the east side of the river the jettee at Reedy Point is complete and in order. The one next below was constructed, but, having been destroyed by the current, is not yet rebuilt. The three other jetties contemplated by the plan have not been commenced. A dike or obstruction made by the State of North Carolina, closing the passage between Campbell's island and the main at the west bank of the river, is breached to a considerable extent, creating thereby a broad and deep channel-way through it. And the dredge-boat and mud flats are in a condition that will require repair before fit for service. Having examined into the plan for the improvement of the river, and the end to be accomplished, and the nature of the bed and banks of the river, we respectfully recommend a continued prosecution of the original plan, in the following order and to the following extent: 1st. To close up the channel-way created by the breach in the dike between Campbell's island and the west bank of the river, and continue the operation of dredging, and the preservation of the jetties already constructed. 2d. To reconstruct the jettee next below Reedy Point, in about the same place, but change the position and direction of it, to avoid, if practicable, the rock below the bed of the river, which obstructs the driving of piles. 3d. Should it then be found necessary, to construct the remaining jetties as laid down on the plan. And that the public property of every description herenunto appertaining be advantageously and economically applied to its execution.

* * * * *
All of which is respectfully submitted.

JOS. K. F. MANSFIELD, *Lieutenant Corps of Engineers.*

JOHN H. WINDER, *Lieutenant 1st Reg't Arty, on Eng'r Duty.*

L.

Annual report of work done for the improvement of the navigation of the Ohio, Missouri, and Mississippi rivers, and for the removal of the great raft from the bed of Red river, during the year ending the 30th of September, 1835.

The summer of 1834 was so far advanced when the appropriation for continuing the improvement of the navigation of the Ohio, Missouri, and Mississippi rivers was made, that it was impracticable to make the necessary repairs on the steam snag-boats and get them out of the Ohio river, until a rise of the water in that river in the month of November. On the 3d of November the Archimedes began her operations at the mouth of the Ohio, and worked up the Mississippi. On the 19th of the same month the Heliopolis commenced work at the same place, and worked down the Mississippi. By reference to the monthly reports of the masters of those boats, on file at the department, it will be seen that 787 snags were removed from the bed of the Mississippi, and 2,488 trees were felled from its caving banks, between the 3d of November, 1834, and the 10th of March, 1835, at which time the Heliopolis was laid up at St. Louis, Missouri, for safe-keeping and repairs, the water being too high for her to remove snags.

The Archimedes closed her operations in the Mississippi on the 11th of January, 1835, and proceeded up the Red river to assist in the removal of the great raft from its bed, where she remained until the 25th of May last, when she was taken to Louisville, Kentucky, to which place it was necessary for her to go to receive repairs, which have been done. That boat has been at work in the Mississippi river, between the mouth of the Ohio and the Little Prairie, since the 21st of September, and has removed 103 snags up to the 30th of that month. The Heliopolis commenced operations at the mouth of the Missouri river on the 29th of August last, and worked down to the mouth of the Ohio. From that place she ran down one hundred miles to the Little Prairie, where she again commenced work, and has proceeded down to island No. 36. In the distance she has worked, (260 miles,) from the 29th of August to the 30th of September, she has removed 372 snags, and felled from the banks 101 trees that were on the edge of the banks and must have fallen into the river in a few days.

The whole number of snags removed from the Mississippi river in the year ending the 30th of September, 1835, has been 1,462, and 2,599 trees felled from the banks. Nearly all the snags that have been removed during the last year were from the annual accumulation occasioned by the falling in banks, changes of channels, and trees rising from the bottom that have been confined by various causes. The greatest portion of those snags were produced by the cavings of the banks, which must continue to be the case until the timber is cleared from them. Extensive experiments have been made on felling the timber from the caving banks.

The result has proved eminently serviceable to the improvement of the navigation and the preservation of the banks of the river.

I have been particular in examining the effect, and find that in nearly all the bends where the timber has been effectually cleared from the shores the banks have ceased to fall in. The earth crumbles from the top of the bank after the timber is off, and deposits itself underneath, by which the bank becomes graded to an angle of from thirty to forty-five degrees. A further proof of the effect of clearing the banks is seen from Natchez to the Gulf of Mexico, where the lands have been many years in cultivation, and they do not wash away or cave in. Many persons object to felling the timber on the banks of the river, on account of the stumps falling in and forming dangerous obstructions.

If this is the case, it has escaped my observation. I have instructed the captains of the snag-boats to examine into that particular subject, and they have informed me that no such thing does exist within their knowledge.

Under all these considerations, I beg leave to recommend that the felling of timber from the caving banks of the Mississippi be again resumed and carried to as great an extent as practicable.

The department may expect that all the accumulation of snags of the last year, and all others in the river that can be operated upon in the stage of water that may continue throughout the fall and winter, will be removed by the two snag-boats before they are laid up for high water. They are in good repair, both in their hull and machinery.

The Heliopolis, however, will not be able to work more than one year after the present without a new hull. She is now in her seventh year's service, and must be rebuilt after the eighth year, or run a great risk of losing the engine and machinery.

The improvement to the navigation of the Mississippi river is evidently very great, and but little now remains to be done, except the removal of the snags that are formed by the caving in banks. The sand,

&c., washing from logs that have been confined by it, float at the top, the root being heavier than the water remains at the bottom and holds the tree stationary, and forms a snag. The changing of the channel also uncovers snags, and forms dangerous obstructions. From those several causes, the number of snags annually deposited in the river will average about one thousand five hundred. There are about three hundred thrown out of the Missouri river by the ice, which has been frozen around them during the winter, and carries the snag off when the winter breaks up. Those are principally found between the mouths of the Missouri and Ohio rivers.

The losses by snags during the last year have been trifling. On inquiry at the principal insurance office at Louisville, I find that the number of flat-bottomed boats that applied for and have been insured for the last six years has decreased as ten is to one; and the premiums on the small number of flatboats are for the last year 75 per cent. lower than they were six years ago. The flatboat is the only craft that a correct estimate can be drawn from relative to the effect on insurance. The danger to the steamboats navigating the Ohio and Mississippi rivers, arising from obstructions in the channel, is not more than one-sixth of the whole risk, nor has a greater proportion of the losses for the last five years been occasioned by striking snags. At least five-sixths of the loss has been from boats running foul of each other, running on shore at night, or in fogs, by hurricanes, fire, breaking engines, bursting boilers, and striking logs afloat on the surface of the water drifting down with the current. Notwithstanding, the premiums now charged on merchandise shipped in good boats is not more than one-half of what it was nine years ago.

From the 1st of October to the 13th of November, 1834, the work on the dam at head of Cumberland island was proceeded with. The channel at that place has been good during the low water of last summer, and will not be shoal at any time hereafter, unless the dam should give way, which now appears to be permanent and secure. No apprehension is entertained of its failure; still it may be necessary to add some rock to it next summer. The other dams in the Ohio river have all answered the purpose for which they were constructed, except that at Three Mile island, near the mouth of Green river, which has never yet been completed, but will be finished in a few weeks hence.

On my return from the great raft in Red river, 10th of June last, it was necessary to repair the boats that had been engaged in its removal, and by which they had been materially wrecked.

The steam snag-boat Archimedes required many new planks on her bottom, her wheelhouses and upper works all new; a large portion of her decks also required shifting, and recalking on bottoms and decks; the Java and Souvenir required sheathing both on their bottoms and decks; new wheelhouses, with extensive repairs on their engines. The great demand for every description of mechanics required for building steamboats and engines made it difficult to get the repairs done, and consumed much more time than would have been necessary in former years. Those three boats have been repaired.

The snag-boat Archimedes has been at work since the 16th instant. The other two will proceed to work in the Ohio, below the falls, as soon as crews can be engaged for them. Labor is in such demand that men cannot be had to man those boats without some delay.

In relation to the improvement of the navigation of the Arkansas river, nothing can be done before April, 1836, towards building the iron boat authorized by Congress at their last session, owing to the scarcity of iron of the kind required to build such a boat.

My preparations are all made for the removal of the remainder of the great raft in Red river, except the rebuilding of one of the small steamboats, which will not be finished before the 20th of November.

The Souvenir and Java will proceed to the raft about the 15th of November, and the other boat, which is rebuilding, will be taken there as soon as she is ready to run. For a report of what has been done in removing the great raft in Red river, I beg leave to refer to my letter to the department dated the 1st July last.

I have the honor to be, sir, very respectfully, your obedient servant,

H. M. SHREVE, *Superintendent, &c.*

Brigadier General C. GRATOT, *Chief Engineer, Washington.*

LOUISVILLE, Kentucky, July 1, 1835.

Sir: I closed my operations on the Ohio river on the thirteenth of November last. On the following day I proceeded to Red river with the United States steamboats Java, Souvenir, Pearl, three keel-boats, three machine boats, and three hundred men, officers, mechanics, &c. On the 1st of December I passed the rapids of Red river with much difficulty, after a detention of five days, having to unload all my stores, tools, &c., and haul the boats over the reefs of rocks that stretch across the river at that place. On the 10th of the same month I reached the mouth of the Coshada chute, about forty miles below Loggy bayou, where the foot of the raft was located on the 11th of April, 1833. From the mouth of this stream upwards, the Red river becomes narrow, its channel being contracted to a width of two hundred feet, where I found a large number of trees growing under the banks of the river, near to, and many of them in, the water, standing in an inclined position, projecting their tops near the middle of the river, and consequently presenting a formidable obstruction to the navigation of the river, and at the same time forming a very great impediment to timber that floats down the river, and was liable to produce a renewal of the raft. Finding this to be the inevitable consequence if the timber was left standing, I determined to clear the river from the mouth of that stream (Coshada chute) during the low water. Accordingly, I commenced operations at that place on the 10th of December, 1834, from which place I have cleared all the banks and islands of the timber that stood in or near the water at its low stage, as far up as the raft had been removed in 1833. That work, together with the removal of the snags and remnants of raft not removed in 1833, owing to the high state of the water that then prevailed, occupied the whole force up to the 20th of January, 1835. I then proceeded with the clearing of the river from the raft and standing timber as I progressed with the work. On the 14th March I had executed the work as far up as the first point marked on the rough sketch of the river for a cut-off, furnished with my report of work done in 1833. On examining the bend and neck of land at the narrowest point, I found the distance around the bend to be about eight miles, and the cut to require an excavation of 261 yards in length, 8 yards wide, and 3 yards deep, except through a low, flat bottom on the lower side of the neck of land, which was covered with a growth of timber 30 yards wide. Through that bottom the excavation was 100 feet wide, 9 feet deep, being 5 feet below the lower level of the water, and 8 feet 8 inches below the upper level, at the time the excavation was

made; the water then on the lower level about 4 feet below low-water mark. The excavation was finished by the steam snag-boat Archimedes and her crew, with the assistance of fifteen extra hands, on the 2d of April. Cubic yards excavated, 8,544. In that condition the water was let into the canal on the 13th of May. On the 16th three keel-boats passed up through the canal, and on the 26th the steamboats Souvenir and Java passed through without difficulty. The cut was then upwards of 200 feet wide and 30 feet deep, being the whole and entire channel of the river. Immediately above the cut, in the bend, I secured the drifting timber in such manner as to prevent it drifting down the stream. The whole raft in the bend was then removed from its original position, and stowed in the lower end of the bend, except a portion that was used to fill up the mouth of the Sand Beach bayou, which runs out of that bend about two and a half miles above the cut-off. Two and a half miles above Sand Beach bayou is the mouth of Anderson's bayou, which runs across from the Bayou Pierre four hundred yards, and falls into the bend with rapid current. At the time the work was executed nearly all the water flowing down the river passed through Anderson's bayou from Bayou Pierre, leaving the balance of the bend from the junction of Anderson's bayou and the Red river up to its junction with Bayou Pierre, without a current, a distance of seven miles, (three miles below the upper end of the canal, and four miles above the canal.) The effect produced by the opening of the canal was to create a rapid current, say four and a half miles an hour, from the Bayou Pierre down the old bed of the river, and a current of about two and a half miles per hour up the old bed of the river, from the mouth of Anderson's bayou to the canal; (the distance each way is nearly equal.) The length of the Red river has been shortened eight miles by the same operation. The bend has been filled with timber about four and a half miles, and is yet capable of taking in the raft for at least eight miles higher up than where it is now cleared. On the 19th March the steamer Souvenir passed through Anderson's bayou to Bayou Pierre, thence into the old river above the mouth of Bayou Pierre, and commenced operations on the first raft above Coate's bluff, being that entire section of the raft around which Lieutenant Sewall excavated a canal some years since. That boat, with a crew of officers, mechanics, and laborers, to the number of thirty, effectually removed the whole raft in fifteen days, at an expense of about five hundred and twenty dollars. On the 13th of April the work was all finished as high up as Soda bayou, fifteen miles above the canal. Through this bayou the boats pass that transport goods, produce, &c., to and from the country above the raft. It is only navigable for keel-boats at the highest stage of water. The distance from its junction with the river, through Soda lake and Black bayou into the river above the raft, is estimated at forty-eight miles. About two-thirds of the water of Red river flows down through those bayous and lakes, being forced out of the river at the head of the raft by the back water formed by the masses of timber crowded into the channel. The remaining portion of water passes down the old bed of the river through the raft, from its head twelve miles down to the Willow chute, a bayou through which at least one-half of the water that runs down it escapes from the old bed of the river, and does not return to it again until it passes the raft and falls in at the mouth of Loggy bayou. Seven miles lower down, Williams's and Benware's bayous run out of the river, and carry off all the water from the old bed of the river, leaving twelve miles, from Benware's bayou to the mouth of Soda bayou, without current.

There was not a sufficient circulation to maintain the color of the water in the river, which was as clear as lake water. In this distance of twelve miles, the raft was found to be much heavier than any part of that removed below. Since the timber had been drifted into this part of the river, and forced its waters through the passes on either side of the river, as above described, a deposit of mud had accumulated to such an extent as to cover a large portion of the timber, on which the willow and cottonwood had sprung up and taken root on the logs of which the raft was composed. Many trees were found growing in that manner as large as 18 inches in diameter.

To remove this description of raft required much more labor than any before met with. The greatest delay, however, was for want of current in the river to float the raft off after it had been loosened from its bed. To remedy that great evil, I was compelled to throw works across the mouths of Benware's and Williams's bayous and the Willow chute. Those passes were so far stopped as to create a current through the river below them sufficient to move the timber down after it was loosened from the raft. The current thus created will increase as the raft below is removed, and the action of the water removes the deposit of mud from the bed of the river. The raft was all removed within three miles of Benware's bayou, having employed the whole force from the 13th of April to the 25th of May to stop the bayous above alluded to, and to remove nine miles of the raft.

There yet remains to be removed 23 miles of the raft, from the point where the work was stopped on the 25th of May to its head, a large portion of which will not be more difficult to remove than what has been cleared away below Soda bayou. But the bayous that carry the water off from the river, on either side, must be stopped in such manner as to force the water back into the old bed of the river, and create a current to drift the timber off as it is loosened from the raft.

To estimate correctly the expense of removing the remainder of the raft is extremely difficult. The work to be done to complete the improvement is of such a nature that its cost cannot well be calculated. The bayous to be stopped may require great labor, or it may be done for a small amount of labor. Much will depend on the stage of water in the river. If it should be low water when the work is done, it may be effected for less than one-half the sum it will cost at a medium or high stage of water. The location of the work compels the executors of it to run all those hazards. Its great distance from any section of our country where labor can be procured makes it necessary to transport laborers from the Ohio river, and they cannot be prevailed on to go to that climate to labor earlier than October nor later than May. Consequently there is no advantage to be taken of the low water in the summer. The balance of the appropriations remaining on hand and in the treasury will go far towards the completion of the work. I would, however, recommend a further appropriation of \$20,000 as early in the next session of Congress as it can be obtained. If it should not be required, it will not be expended; but if it should be required, and not be available, the consequence will be delay and additional expense of probably half that sum. There can be no doubt now but the work can be completed in the course of the next winter and spring if the necessary funds are furnished in time to allow me to continue through the whole season, or so much of it as may be required to finish the improvement, which may be done in ninety days, or it may require six months, as circumstances may occur for or against its speedy execution.

If the last season had been a favorable one, there is no doubt but the whole work would have been completed by the 25th of May last, and for the same expenditure that has been made. But as it turned out, the water did not rise in the Red river until in May; consequently the progress of the work for the

removal of the raft was delayed, for want of sufficient water in the river, from the 1st of January (the time it usually rises) to the 10th of May.

I beg leave to recommend to the department the necessity of clearing the low bottoms in the river of all the timber that grows in them, as the action of the water on the banks, and particularly those of the latest formation, is now washing them, so that they are carving in throughout almost the whole extent of the raft region. If the timber is left standing, the navigation of the river will be constantly interrupted by its forming snags and raft in its bed. To fell the timber, and cut the tops and trunks of the trees short, will probably cost about \$100 per mile. The whole distance necessary to execute that work will not exceed one hundred miles.

Permit me also to recommend an improvement at the rapids of Red river, near Alexandria. The obstructions to its navigation at that place consist of two reefs of rock stretching across the river. The lower reef extends up and down the stream about two hundred feet; the other, about one and a half miles higher up the river, has an extent up and down the stream of about seven hundred feet. The improvement can be made by excavating the rock at each of those reefs to a sufficient width and depth to afford any given depth of water that may be required, as no injury can be produced to the navigation above by drawing off the water by the excavation required, because the river above the rapids has a depth of from six to ten feet at extreme low water for a distance of fifty miles; consequently the upper level will not be drawn off to any perceivable extent at that distance above the cut. The excavation can be effected at a low stage of water by the use of the common mattock and shovel. The rock is a soft sandstone, which may be dug up and removed without blasting, and with but little more labor than is required to remove a firm clay bank. I am not sufficiently acquainted with the particular extent and depth necessary to be excavated to estimate the probable expense of the improvement, but I know it to be one of great importance to that section of the State of Louisiana and the Territory of Arkansas that lies on Red river.

I have the honor to be, very respectfully, your obedient servant,

HENRY M. SHREVE, *Superintendent.*

General C. GRATIOT, *Chief Engineer, Washington.*

M.

MEMPHIS, *January 31, 1835.*

SIR: Since my last report in November, the operations for improving the navigation of the Mississippi have been prosecuted vigorously. The snag-boat Archimedes left the mouth of the Ohio November 3, 1834, and proceeded to St. Louis, removing such snags in her progress as were visible at that stage of water. On the 11th of the same month she commenced her descent, and continued to remove those obstacles which presented themselves in the navigation. Having reached the mouth of Red river January 11, 1835, the Archimedes ascended that river to join in the removal of the great raft. The Mississippi had risen considerably higher than it had been during the summer before the Archimedes commenced work, and had covered many of the most dangerous snags which had been exposed to view at lowest water, rendering it impossible to accomplish their removal.

This work is now the most important that remains to be effected, as it is such snags only as are a few feet below the surface of the water at a medium stage that are to be dreaded by boats. At high water there are few if any dangerous snags in the river. The only period of the year when they are visible is at extreme low water, which occurs usually in August, September, and October. The Archimedes removed, during the season, from the bed of the Mississippi, three hundred and seventeen snags, and cut from the banks eleven hundred and sixteen trees. The same boat, on her way up the Red river, removed one hundred and eighty-nine snags, and cut twelve trees.

She commenced operations at Tiger island, one of the most dangerous points on the river, and removed every obstacle at that place. After commencing on the raft, it was impossible to keep a journal of the logs and snags removed. The Heliopolis entered the Mississippi and commenced work November 19. This boat has undergone thorough repairs during the last summer, and is now in excellent order, and under the able management of her present captain is producing the most satisfactory results. I visited this boat on her way down the river to witness her performance. The department is already in possession of the most unquestionable proofs of the efficiency of this machine, drawn from its hitherto successful operations; but I cannot here omit an opportunity of rendering the merited tribute of praise to its excellence, and to the ingenuity of its inventor. No machine can surpass it in its adaptation to the work in the execution of which it is now engaged. The machine is simple in its construction and easy in its application, while in power it has been found adequate to overcome promptly every obstacle it has yet encountered. Through the agency of this machine the largest snags and logs are extracted with ease, many of which, without its intervention, could never have been removed. The value of such an auxiliary, in the annual improvement of the Mississippi, is commensurate with the importance of the work, and cannot be properly estimated, except by comparing its performance with the tardy and expensive mode of removing snags and logs before its invention. Those places from New Orleans to the mouth of the Ohio river which at low water are most dangerous from snags are, My Wife's island, (one hundred and thirty miles above Natchez;) islands 97 and 96; Stack Island reach; island 94, cut-off at mouth of Red river; islands 83, 78; point 35 miles above Chicot; Arkansas bend; White River bend; islands 65, 63, 62; bend between Helena and mouth of St. Francis; Cow Island chute; island 37; Plum Point; Canadian reach; Riddle's Point, and bend below mouth of the Ohio. Of the snags at those places, some have escaped being removed, from having been covered with water when the boats passed them; others were in such situation that they could not be approached, and some have been formed by the recent falling in of the banks. One summer such as the last has been well enable the boats to remove all the snags in the low-water channel. This most desirable work will receive the earliest attention of the superintendent, and should the season be favorable, will be accomplished during the summer.

I have the honor to be, sir, very respectfully, your obedient servant,

A. H. BOWMAN, *Lieutenant of Engineers.*

General CHARLES GRATIOT, *Chief Engineer.*

MEMPHIS, July 31, 1855.

SIR: Since my inspection in January, the *Heliopolis* has been constantly engaged in removing snags and logs on the Mississippi, having since that time descended twice from the mouth of the Ohio to Natchez, and returning reached St. Louis March 10, where she was laid up for repairs. During the greater part of the winter and spring the water has been too high for the boats to operate advantageously, except in some chutes which were too shallow at lowest water to admit them. Notwithstanding these disadvantages the *Heliopolis* removed, during the season of her operations, six hundred and eighty-six snags, and cut from the falling in banks thirteen hundred and eighty-one trees. Adding to these numbers those removed by the *Archimedes*, we have one thousand and three snags, and two thousand four hundred and twenty-four trees, as the result of their united labors. The advantages resulting from the removal of so great a number of dangerous obstacles in one season is everywhere manifest, especially between the mouth of the Ohio and St. Louis. Where the banks were cleared in 1852 the river is entirely free from snags, except at such points as the banks have fallen in beyond the clearing; and as this has occurred in comparatively few instances, the good effects of the work then executed are still felt. In my last report I had the honor to state my belief that clearing the timber from the caving banks was the only effectual mode of preventing the accumulation of snags in the Mississippi. I am confirmed in this opinion by the observations made during my last inspection. I beg leave again respectfully to present this subject to the consideration of the department. Objections have been raised to the prosecution of this mode of improvement, which, upon examination, will be found to possess little weight. It is objected that the stumps of trees which have been cut become dangerous snags where the banks on which they stand have fallen in. The futility of such an objection will be readily admitted by all who are well acquainted with the nature of the falling in banks of the Mississippi; for to them it is well known that the deepest water is generally immediately alongside of the caving banks, and as the stumps are cut low, it is improbable that they should extend so near the surface of the water as to become sources of danger to boats; though instances, I believe, have occurred of injury from projecting logs, which had been cut off even with the surface, but by the subsequent wearing away of the earth became exposed.

Another objection has been founded upon the destruction of wood incident to this mode of improvement. The trees are generally cottonwood and sycamore, neither of which is esteemed of much value; and, from the inexhaustible quantities of fuel on the banks of the Mississippi better suited to the purpose of generating steam, it must be long ere much importance can be attached to timber of this description. Such are the reasons urged against clearing the caving banks. It is a well-established fact that snags do not move far from the point where they first fall in, the weight of earth attached to their roots serving as an anchor. They are sometime moved by the ice that adheres to them in winter, and by drift wood during the spring floods. It is also well established that trees which once float seldom form snags. Admitting this, it is sufficiently evident that if the banks are once cleared there can be no subsequent formation of snags. To secure a safe navigation at all seasons on this river, it will be necessary to adopt one of the two plans—either to keep, as at present, boats to remove snags as they are formed, or to clear the banks of all timber, thus preventing their formation. The comparative expense of the two plans has already been submitted to the department.

The most vigilant attention, if the first mode be adopted, can only remove dangers as they occur, while the same care bestowed upon the second plan, with less than one-fourth of the expense, would anticipate them, and, by removing such trees as were likely soon to fall into the river, prevent the formation of snags altogether.

The expediency of following the latter mode of improvement will ultimately appear in the failure of every other attempt at preventing the dangers incident to the navigation of the Mississippi. How far the labor already bestowed upon this river has contributed to the improvement of the navigation will be sufficiently evident from the reduced rates of insurance since the work was commenced. It is not possible at this time to procure a list of the boats lost annually since 1825; such a list would, however, give strength to the evidence of improvement to the navigation furnished by the decreased rates of insurance. The time devoted to the improvement of the Mississippi during the current year, by the two boats, amounts to one hundred and ninety-two days; the per diem expense of each boat being eighty-one dollars, the whole expenditure will amount to \$15,552; the total number of snags removed is one thousand and three, and two thousand four hundred and twenty-four trees cut. Admit the cost of cutting each tree to be one dollar, there will remain \$13,128 as the cost of removing the snags; this gives an average cost of upwards of thirteen dollars for each snag, an amount exceeding that assumed as the average in my last report. The *Heliopolis* has been thoroughly repaired, and will resume her work by the 5th of August, or as soon as the water is low enough, proceeding from the mouth of the Missouri downwards, and will continue to work on the Mississippi during the whole summer. The *Archimedes* is at Louisville repairing; she will be ready for service before the end of August, and will join the *Heliopolis* on the Mississippi without delay. This arrangement is very desirable, as there are many island chutes into which the *Heliopolis* cannot enter on account of her draught of water. There now remain few places on the Mississippi below St. Louis the navigation of which, at high water, is attended with much danger; snags are rarely seen except at points where the banks are falling in. Between the mouths of the Missouri and Ohio rivers, the navigation at lowest water is greatly impeded by bars. Obstructions of this nature in the Mississippi have not yet attracted much notice, nor is it probable that any permanent amendment in the navigation will ever be effected in this particular, owing to the changes that are taking place annually in the position of the bars. There is one, however, to which particular importance attaches itself, from its location. I allude to that forming in front of the city of St. Louis, which will seriously affect the prosperity of that flourishing town if it should increase to the extent apprehended.

I am not in possession of the facts necessary to form an opinion of its progress or probable limit. The importance of the commercial interest at stake demands a more critical examination than I had time or the means of making. The success which has attended the construction of dams on the Ohio river leaves no doubt of the practicability of removing this bar, by a dam running from the Illinois shore to Blood island, if it should become necessary to have recourse to artificial means for its removal.

The operations on the Red river raft have been completed to a point within twenty-three miles of the uppermost extremity; of this distance a portion only is raft, and this, from its more recent formation, is less difficult to remove than those parts which, by the deposit of earth and the accumulation of vegetable matter, have become imbedded and almost solid. In 1828, when I explored the raft, the greater part of this portion of it was loose and floating, unlike the older formation, or what is called "sunken raft," which

generally rests on the bottom. It was expected by the superintendent that the work would be completed by the first of May, at which time the engagement of his hands expired. In this, however, he was disappointed; and it being deemed unsafe to remain later on the score of health, it became necessary to defer its completion until another season.

I have the honor to be, sir, very respectfully, your obedient servant,

A. H. BOWMAN, *Lieut. of Engineers.*

General C. GRATIOT, *Chief Engineer.*

MEMPHIS, August 1, 1835.

Sir: The last report I had the honor to submit to the department of the progress of the works for the improvement of the Ohio river contained a detailed statement of their advancement, and exhibited their condition at that time; subsequently to which nothing has been done on the river except the completion of the Cumberland dam, in which the superintendent was then engaged. Since that period the only alteration in the channel at this work consists in the removal of some of the bars and the formation of others, giving evidence of a gradual movement of the sand and gravel by the current of water which the dam forces into the channel, and leaving little doubt of the final result. It is the intention of the superintendent to raise this dam still higher, by which the accomplishment of the desired object will be more speedily effected. The accumulation of sand and gravel above and below the dam, while it gives assurance of stability to that work, likewise affords satisfactory proof that the channel on the east side of Cumberland island is rapidly enlarging its dimensions. When we take into consideration the immense mass of sand and gravel that a year ago obstructed the eastern channel, sufficient in quantity to form a bar across the whole width three feet above low-water mark, and running a considerable distance up and down the stream; and when it is remembered that this mass, which moves slowly and with difficulty, has to be swept by the force of the current into the deep holes about the mouth of the Cumberland, a quarter of a mile below the bar, it is not surprising that, in its progress towards these holes, it should collect occasionally in lumps, causing uncertainty and difficulties in the navigation inseparable from the means used for the improvement of this part of the river; the ultimate success of this work is no longer doubtful.

It is probable that the current would already have opened this channel entirely, but that it only operates during that portion of the year when the water is below the level of the top of the dam, and is consequently forced into this channel. Little alteration is perceptible at the Sister islands since my last report. The channel on the east side of the island has so far filled up that at the present stage of the river (seven feet above extreme low water) scarcely any of the stream passes on that side. The sand-bars have extended themselves at the foot of the island, confining the volume of water to a narrower space; the extremity of the bar, which projected from the east shore opposite Bay creek, has been partially washed off; boats are not now compelled to approach so near the west shore as formerly. There is a small break in the principal dam at this place near its head, noticed in a former report, and also on a sketch forwarded to the department, which has been considerably enlarged since the last inspection, and will ultimately injure the work if not arrested in time. The Sister islands were once among the worst places on the river; at present they offer no obstruction to the navigation. This remark will apply in a great degree to Scuffletown and French Island bars. Three Mile Island dam is not yet finished, but will be commenced early in August. It is the intention of the superintendent to employ the forces designed for removing the raft on Red river upon the Ohio until the season for recommencing the former work. By this judicious arrangement these works serve as a rendezvous for collecting laborers during August, September, October, and a portion of November, which are the only months when the services of men could be profitably employed on the Ohio, leaving time, after the suspension of these works, to transport the forces as early as it is expedient to commence operations on Red river. Notwithstanding the space over which the works intrusted to the superintendence of Captain Shreve are spread, by his judicious and systematic division of the time, each appears to have received all the attention that it required.

I have the honor to be, very respectfully, your obedient servant,

A. H. BOWMAN, *Lieut. of Engineers.*

General CHARLES GRATIOT, *Chief Engineer.*

N.

PITTSBURG, October 25, 1835.

Sir: In obedience to your instructions of the 23d of April last, assigning to my superintendence the application of the sum of \$50,000, appropriated at the last session of Congress for the improvement of the Ohio river above the falls, I have the honor to report the progress and state of the operations under those instructions on the 30th of September ultimo.

On my arrival at Pittsburg, the head of the line, in May last, the Ohio river then presented a deep and turbid stream, with a depth of water over its shoalest points of eight feet, in which or nearly a similar state it subsequently continued until September, being maintained by the freshets of the intermediate months, and varied by occasional depressions of short duration; but at no time this season has it been impracticable for steamboats of a construction adapting them to shoal navigation.

On the receipt of my instructions, it did not appear that any regular or detailed survey of this part of the river, with a view to its improvement by the general government, had ever been made, or was accessible at the time; the only information in my possession relative to the obstructions in the river at the time of my arrival thereon was contained in the extracts taken from the notes of an examination made in 1819 by commissioners appointed by the several States interested, and to which I was favored with access through the politeness of the canal commissioners of Pennsylvania; these, although embracing much useful information in relation to the several obstructions, were not sufficiently minute to render

less necessary a resurvey of the whole upon a different plan before the work hereafter deemed necessary for the contemplated improvement could be correctly located or safely constructed.

The duties assigned me required, as a preliminary step, a minute and thorough examination of the obstructions at low water; this, for obvious reasons, could not be undertaken until the river had arrived at its minimum stage, which did not occur until late during the present season. In the interim the whole line was traversed, the principal commercial points visited, and investigations made, having for their object to determine the relative importance of the different portions of the line, and the selection of those points or sections having the greatest claims to precedence in the order of improvement; at the same time the obstructions in the river of a detached nature being numerous, and an examination into their extent, or the peculiar circumstances of each, not immediately required for the object in view, attention was forthwith directed to the construction of the machinery necessary to remove with the greatest facility all obstructions of that class.

The snag machinery invented and used with so much effect by Henry M. Shreve, esq., in the removal of obstructions to the navigation of the Mississippi and Red rivers, and which combines in its construction much simplicity of arrangement with great power of action, was, after a short inspection, unhesitatingly adopted for the removal of similar obstructions in the Ohio river above the falls; it was therefore determined to proceed without delay to the construction of four of these machines, for application on the river, and the procurement of the requisite boats, flats, implements, &c., during the high stage of the water, the expectation being confidently entertained that the means of constructing any description of machinery or craft could be readily obtained at any of the principal points on the line.

The Ohio river, from its commencement at Pittsburg, forming a continuation of the grand chain of internal communication stretching from the Atlantic westward, now rendered uninterrupted by the completion of the Pennsylvania line of canal and railroad, and the heavy amount of merchandise received and transhipped at the head of the river, estimated at half a million of tons annually, and progressively increasing, together with the general designation of the appropriation, induced attention to be first directed to the section lying between Pittsburg and Wheeling, which being of a shoaler character than that below it, was, from a due regard to the circumstances alluded to, selected for the commencement of the operations. It was then contemplated to hasten the construction of a portion of the machinery at the head of the river, with a view to its completion and application on the fall of the water, at which time it would become necessary to turn attention to the examination of the shoals, and the formation of plans for their improvement.

In preparing the machinery and boats during the high stage of water, it was found that the opinions entertained in regard to the facilities for its construction at the points where alone they could be looked for were entirely erroneous. The rapidly increasing trade on the western waters, and the many steamboats contracted for or building on this line, the number of which has been estimated at upwards of one hundred, rendered the accumulation of business on the hands of the builders too great to admit of their assuming new jobs at this time; and the construction by individual application was rendered nearly as uncertain by the consequent absorption of all suitable workmen in this branch of business.

A machine, with the necessary keel and flat boats, and a full equipment of the necessary implements for the removal of rocks and snags, was completed in September; at this time the river presenting a favorable stage for the object, the work of examining the shoals was immediately proceeded with.

Previous to this, in the month of August, whilst in expectation of a continued fall of the water, the most important obstruction in the upper section of the river was partially surveyed, with a view to the location of works for its improvement; the examination being arrested by a sudden and unexpected freshet in the river, the surveys were subsequently completed in September. The plan for the improvement of Brown's island, the point alluded to, is now before the department.

An examination of every obstruction to the navigation was completed in September.

The river has, throughout the present season, continued in a state unusually favorable to its trade and navigation, and, under these circumstances, has not presented the most satisfactory view of its low-water character. The examination, however, has served to determine very satisfactorily the nature, extent, and comparative promineny of the different shoals.

The Ohio river derives from the Alleghany its principal and most lasting supply; during the summer months its volume is maintained and very frequently increased by the occasional rains during that period, which enlarge materially the supplies drawn from the copious basin of this tributary; and it is only during a season of unusual drought that it arrives at its minimum stage; this, from a comparison of the best authorities, is assumed at fifteen inches. The least depth obtained during the examination this season was 2 in. 2 sec., although the water for the brief space of a few days only has been as low as two feet over some of the shoals between Pittsburg and Wheeling. The Ohio throughout its whole course has in general a very equable and gentle current. During high stages this is the most uniform, although its rate is then considerably increased; at low stages the river becomes resolved into a succession of ripples, with extensive slack-water basins between them, varying in depth from two to three and even five fathoms. The valley of the river is bounded on each side by richly timbered hills, of great uniformity in their average height, enclosing fertile bottoms, which alternate in very regular succession on either side of the river; ledges of rock occasionally appear along its banks; these are generally of stratified and easily wrought sandstone. There are few points on the river deserving the name of gorges; the nearest approach to an opening of that character is found at Brown's island, 65 miles below Pittsburg. The heights here approach within the distance of 600 yards, and ledges of rocks exhibit themselves on each side of the river. There are several other formidable passes on the river, which, however, in comparison with the shoals, are few in number; of the character alluded to are Captina and Buffington's islands, and the rapids called Letart's Falls; these are more dangerous for the passage of keel and flat boats than for that of steamers, which, under the management of careful pilots, are exposed to little risk when there is found sufficient depth of water at those points for floatage. The obstructions in the river generally arise from the want of sufficient depth of water over many of the shoals at low stages. There are points, however, where, owing to the existence of projecting rocks, the navigation is not safe for as much depth as is contained in the channel. The bars in the river may be classed, 1st, into those formed of hard and apparently of permanent gravel; 2d, shifting or loose gravel; and 3d, shifting sand-bars. The first abound in the upper section of the river. These are generally exposed to a strong current, and formed of rounded oblong pebbles and stones, varying from one to fifty pounds and upwards; they become by the continued action of the water cleared of all smaller particles, firmly

imbedded, and by their conformation resist the action of the current; the bottom assuming the consistency of, or similarity with, a pavement of smooth stones.

The bars of the second class are composed of fine gravel, movable by strong currents, and occur, as well as most of the sand-bars, at the lower junction of the chutes formed by the islands; these change their position when, upon the fall of the waters, the main channel of the river predominates in a new direction, and the fall and current increased by the subsidence of the lower basins. In the upper section of the river the sand-bars are always found under the lee of the islands, or at the meeting of the channels. In the lower section are extensive sand-bars, unaccompanied by islands; the most important of these are met with between Guyandot and Cincinnati. In addition to the shoals, large quantities of logs and snags are distributed in different parts of the river. On some of the shoals they lie imbedded in the gravel, forming, by the projection of their stumps, very dangerous obstructions to the low-water navigation. Large trees, with their roots, branches, and foliage in full verdure, undermined and thrown into the stream by the gradual abrasion of the alluvial banks at high water, are of frequent occurrence. Many logs are disorged from the smaller tributaries and creeks which empty into the Ohio. These creeks, when swelled by rains into rapid torrents, discharge large quantities of pebbles and large angular stones into the bed of the river, in many cases forming extensive bars at their junction.

In descending the river from its head, a considerable improvement is experienced in the depth of the water after reaching the foot of Wheeling island. From this point the river, at stages admitting the passage of light draught steamers, is practicable for about six inches greater draught than the section above it. This circumstance is not due to the reception of any important tributary to its waters, but solely to the decrease in the rapidity of its descent. This difference in the depth is less perceptible at an extreme low stage. From a comparison of the best data obtainable, the descent from Pittsburg to Wheeling has been estimated, approximately, at one foot to the mile; from Wheeling to Guyandot, eight inches; and thence to Louisville, four inches per mile. Below Guyandot the character of the river becomes materially changed. It here enlarges its bed, and flows onward with a diminished current. The level reaches are longer, and the descent at the ripples less. This enlargement of its bed, however, renders the depth over some of the shoals in this part of the river very slight at low water, forming several very shoal sand and gravel bars. From Cincinnati to Louisville the navigation becomes comparatively much improved. There are two or three bars on this section, and some dangerous snags below the mouth of Kentucky river, which require attention. It would be desirable to give a specific description and sketch of each shoal were it not that their great number and similarity would render such description a monotonous repetition of nearly the same circumstances. The chief results of my examination are therefore embodied in a tabular form, the most convenient for reference, and is herewith annexed.

An important feature in the Ohio river is observable in the fact that at all the islands are also located the worst shoals and rapids or falls. These islands are considered rather the effect than the cause of this fall, and formed, like the alluvial bottoms, by the gradual deposit from the river, which, at those points being spread out at low water, leaves some portions of the projecting parts of its bed uncovered. In respect to Captina and Buffington's islands, the low-water channel at each defects from the main direction of the bed, and passes off laterally, through a narrow and circuitous route, around the island. The main or direct channel in both the cases alluded to is rendered dangerous by rocks, and too shoal at low water for navigation.

The rocks in the Ohio chute at Captina island appear, from recent examinations, to be of a detached character, and susceptible of removal. The direct channel at Buffington's island is bounded by a ledge of stratified sandstone rock, projecting into the river, which is supposed to continue entirely across the channel beneath the gravel bottom. It is, however, situated nearly at the foot of the rapids. Some loose rocks are scattered in this channel.

With regard to the islands, and particularly those at which the low-water channel deviates from the direct continuation of the main bed of the river, shifting bars are always found under the lee of the islands. This rule appears, from the result of my examination, to be of general application in regard to all similar points on the river. The water at high stages passes with the greatest volume and current through the most direct and spacious channel, which, then predominating, throws into the foot or junction of the smaller passage powerful eddies, depositing therein a bar, which again changes and deepens upon the fall of the waters. With regard to the rapids called Letar's Falls, the river here passes over a rocky bottom, with a descent and current far greater than is found at any other point above the falls. The bottom is free from dangerous projections, and the concentration of the water at this place by the more prominent parts of the rocky bed on each side renders the depth over these rapids much greater than upon most of the shoals in the river. The current, which is here five and three-quarters miles per hour at a moderate stage, can in general be stemmed by steamboats of sufficient power; but for keel-boats, and the lighter class of steamers, permanent warping fixtures are here necessary. The points most requiring immediate attention in the shoaler section of the river, lying between Pittsburg and the junction of the Muskingum at Marietta, are Logtown bar, Black's and Brown's islands, Beech Bottom bar, McMahon's creek, below Wheeling, which requires the removal of many dangerous rocks and logs, Captina island, Petticoat ripple, in the long reach, Carpenter's bar, and Marietta island. At this latter point, the junction of the Ohio channel, opposite to the town of Marietta, is crossed by a large bar of loose shifting sand, which makes from the foot of the island across to the mouth of the Muskingum. At the head of the island, three miles above, the Virginia channel is crossed by a shoal gravel bar.

By the execution of that part of the plan of improvement now in progress, viz: the removal or clearing the channel of all sunken logs, stumps, snags, and projecting rocks, the navigation at low stages, and particularly for light-draught steamers and keel-boats, will be rendered much safer, and even practicable for a deeper draught than it is under present circumstances considered prudent to employ. There are some sand and light gravel bars which are among the very shoalest on the river, but which, notwithstanding, are not ranked among the most serious obstructions from the comparative safety with which their passage may be attempted. A system of improvement, having for its object to secure a specific depth of water at all seasons sufficient to meet the demands of the trade upon those streams which are rendered impassable during the dry seasons from the diminution of the supplies derived from their tributaries, can be effected with certainty only by a series of dams and locks.

As this mode is not, however, contemplated with regard to the Ohio, the concentration of the river into one channel, and the appropriation of all the water passing to that object during low stages, will, it is believed, accomplish all the further improvement contemplated.

The dimensions of this channel should be accommodated to the passage of the various description of

craft which navigate the Ohio river. It is expected that in the upper section of the river the water will require to be confined to a channel fifty yards in width, to cause a sufficient depth for the passage of light-draught steamers. The improvements introduced into the construction of the latter, in reference to lightness of draught, with the present simplification of steam machinery, induces the belief that boats drawing twenty inches may be constructed with sufficient power and capacity for towing and the conveyance of passengers. If the paddles of these boats are applied at the stern, they will be enabled to stem the rapids on the river with much greater facility.

The construction of the works for the improvement of the shoals will require, as a preliminary step, a minute and accurate survey of each, the form, position, and extent of the works required being governed in a great measure by the irregular features of the bed. As the surveys and the works of improvement can only be carried on at low water, and within the limited time allowed by the state of the river for such operations, it is desirable to commence as many works, simultaneously at different points, as may be justifiable by the amount of the appropriation. To this end it is recommended to the department to attach competent surveyors to the work to survey all the points requiring improvement, under specific instructions from the superintending officer in reference to each. These surveys, as fast as executed, with the plan of improvement proposed for each, to be laid before the department for its action thereon.

The operations to the present time have consisted in the construction and preparation of machinery and boats; and in examinations and surveys, with a view to the location of works of improvement.

A machine, with the requisite boats and implements, has been put in operation on the upper section of the river in removing sunken logs and rocks; to which object it has proved to be fully competent. The obstructions of this class are drawn entirely from the bed, and afterwards demolished.

It was expected that the section from Pittsburg to Wheeling would have been cleared this season, but the operations have been recently suspended by a rise of the waters, which has also prevented the execution of the plan for the improvement at Brown's island.

The construction of three additional machines, to be in readiness in the ensuing spring, has been provided for.

It is anticipated that, in the event of a favorable season, all the dangerous obstructions of the detached class may be removed during the next year.

An estimate for the construction of all the works required for the improvement of the shoals cannot be safely hazarded until the execution of the surveys proposed for that object.

The present appropriation will suffice for the operations of the ensuing year. It is considered proper to state that the most favorable season for the application of the appropriation, will not afford four months for efficient operation; during the present season about two weeks only have been found during which the river was in a suitable state for that object.

The expenditures to September 30, 1835, were.....	\$8, 468 31
The amount required during the fourth quarter.....	1, 630 00
	<u>10, 098 31</u>
Amount of appropriation.....	50, 000 00
Leaving for application during the year 1836.....	39, 901 69
The cost of additional machinery, boats, and tools, is estimated.....	\$7, 250
And for their application during the year 1836.....	16, 250
	<u>23, 500 00</u>
Which leaves for the construction of dams, contingencies, &c.....	<u>16, 401 69</u>

The cost of constructing low dams in the upper section of the river is estimated at \$3 the running yard, and the excavation of rocks at \$3 25 per perch. The latter is, however, subject to more variation than the former from the contingencies of weather, rises, &c.

With regard to the annexed table the department will observe that the stage of the water, as there noted, is presumed to be very nearly accurate.

In this respect the river, from its length, is subject to great variations from the time required for the increased discharges from the head tributaries to produce their final effect upon the lower sections of the river.

Drawings of some of the principal points are herewith annexed.
Respectfully submitted.

G. DUTTON, *Lieut. Corps of Engineers.*

Brig. Gen. C. GRATIOT, *Chief Engineer, Washington, D. C.*

Table exhibiting the depth of water and nature of the bottom at the different shoals between Pittsburg and Louisville.

No.	Name.	Shoalest water over the bar.	Stage.	Nature of the obstructions, remarks, &c.
1	Brunot's Ripple			Gravel; strong current.
2	Foot of Brunot's island			Gravel; current gentle.
3	Horsetail Ripple			Gravel and stones; strong current.
4	Lowrey's Ripple			Opposite Lowrey's run a gravel bar.
5	Duff's Ripple			Gravel bar.
6	Merriman's Ripple			Gravel bar projecting from Neville's island.
7	White's Ripple	3' 9"	2' 11"	Ten miles below Pittsburg hard gravel; rapid.
8	Wollery's Trap	3 0	2 9	Gravel and stones.
9	Deadman's Ripple	4 0	2 9	Gravel bar; rapid chute.
10	Sewickly bar	4 0		Opposite Sewickly creek hard gravel.
11	Logtown bar	2 6		Gravel and pebbles; very shoal; strong current.
12	Crow's island	4 0		Hard gravel.
13	Waller's Ripple	4 6		Do.
14	Atkinson's bar	4 9		Do.
15	Beaver shoal	3 6		Gravel and stones; a dangerous shoal.
16	Raccoon bar	3 0		Gravel.
17	Montgomery's island	4 6		Do.
18	Philles island	4 6		Gravel and large rocks.
19	Georgetown island	4 6		Gravel and dangerous rocks.
20	Line island	4 0		Gravel.
21	Bab's island	5 0		Do.
22	Yellow Creek bar	4 2		Do.
23	Baker's island	4 2	From Pittsburg, descending, 2' 6".	Do.
24	Kneistley's Clusters	4 0		Gravel and rocks.
25	Black's island	2 6		Gravel.
26	Brown's island	2 9		Gravel and rocks; dangerous.
27	Will's creek	3 10		Gravel.
28	Well's bar	2 9		Do.
29	Mingo island	3 4		Gravel and dangerous logs.
30	Cross creeks	5 6		Gravel.
31	Cox's bar	3 0		Do.
32	Wellsburgh	6 0		Do.
33	Beech Bottom bar	2 6		Hard gravel.
34	Short creeks	3 9		Gravel.
35	Pike island	4 0		Do.
36	Two Sisters	2 9		Gravel and logs.
37	Burlington bar	2 9		Gravel, sand, and dangerous rocks.
38	Wheeling island	3 3		Gravel and rocks.
39	Bogg's island	3 0	Above Wheeling, 2' 00"; from Wheeling, descending, 2' 6".	Do. do.
40	McMahon's creek	4 0		Dangerous rocks and logs; rapid current.
41	Patterson's bar	5 0		Gravel.
42	Big Grave creek	4 4		Do.
43	Captina island	2 6		Gravel, sand, and logs.
44	Fish Creek island	3 1		Gravel and logs.
45	Gleen's bar	4 0		Hard gravel.
46	Sun Fish Creek bar	4 0		Do.
47	Opossum Creek bar	3 6		Do.
48	Procter's run	4 9		Do.
49	Muckle Downie's bar	4 6		Do.
50	Fishing Creek bar	3 0		Gravel, rocks, and logs.
51	Williamson's island	3 4		Gravel and logs.
52	Pursley's island	3 2		Gravel, rocks, and logs.
53	Wilson's island	3 3		Gravel.

O.

MEMPHIS, August 31, 1835.

Sir: The Cumberland river, at the time of the inspection in October last, was at extreme low water, affording a most favorable opportunity of ascertaining the exact position, extent, &c., of the bars and reefs of rock which obstruct or impair the navigation; sketches of such as were deemed of most moment have since been forwarded to the department. At that time the superintendent was engaged in constructing the wing-dam connecting the head of Line island with the right hand shore of the river. This is the principal work, and measures five hundred and thirteen yards in length; one hundred and fifty yards of this dam will, when finished, be eighteen feet high; the balance will average six feet in height. The dam across what is called the keel-boat channel at Line island, when completed, will be four hundred and sixty-five yards in length; of this, three hundred and fifty are already raised three feet above low water mark. All operations were discontinued on the river, November 29th, on account of the cold weather and high water.

The works were recommenced in April with all the laborers that could be collected. This force was first employed in raising the dam at the head and foot of Harpeth island, and in prolonging that at the foot of the island to six hundred and fifty yards in length. A breach of about sixty yards was made in the dam at the head of Harpeth island by water during the spring flood, which was repaired, and the dam strengthened throughout its whole extent. The work at this island is now regarded as complete, and answers entirely the object of its construction. On the 6th of August the forces were removed to Davis's ripple. More time was consumed at Harpeth island than it would seem to have required; this was caused by the dispersion of the laborers, in consequence of the appearance of the cholera amongst them in June, when no inducement would tempt them to remain longer on the work. The operations, commenced on the 7th at Davis's ripple, were suspended before the end of the month in consequence of sickness among the officers and men, there being only twelve persons for duty at the time they were abandoned. A small force was employed early in August in quarrying stone for the dam at Line island. This force was increased towards the end of the month by the remnant of the laborers brought from Davis's ripple by the superintendent. The important work at this point will, probably, be completed this fall; after which, if the season is not too far advanced, the dam at Dover shoals will be commenced.

The necessity of having accurate surveys of each shoal is strongly felt. Without the information, which can only be acquired from actual surveys, there must unavoidably be great uncertainty in the

results intended to be produced by the wing-dams. The object for which they are constructed is to produce a uniform depth of water over the bars on which they are built; for this purpose it is not sufficient to raise dams at the different shoals to a uniform height above low-water mark. As this river receives few tributary streams which materially augment its volume, the quantity of water discharged through every section of it, in a given time, may be considered uniform, and consequently varies with the product of the breadth, depth, and velocity; assuming as the depth that which is desired to produce on the shoals, and having ascertained the velocity by experiment, the required breadth of the openings to be left between the wing-dams will thereby be known. To construct dams to produce this result with the least expenditure of labor and materials, it is essential to know the distances to different points of the adjacent shore, the depth of water, the direction, breadth of the shoals, and the depth of water on them. The want of this kind of information must cause uncertainty in estimates, and lead to unnecessary expenditures. It was my intention to time my present visit to the Cumberland so as to reach it at high water, for the purpose of determining the influence of the wing-dams at this stage of the stream, as well as to ascertain to what extent the navigation had been benefited from clearing the banks of projecting timber. The season was, however, too far advanced before I reached the Cumberland, which I found at only five feet above the point of the lowest water. It is at this stage of the river that the most decided advantages are to be expected from the wing-dams; when higher, their aid is not required; and when lower, they are incapable of adding sufficiently to the depth to render the stream navigable for any crafts but smaller-sized steam-boats and keel-boats.

Clearing the banks of projecting timber has proved of essential service to the navigation, by enabling boats to approach the points; thus shortening the distances, and in many instances, especially in the convex sides of the stream, giving greater depth of water, which, in such situations, is usually near the shore. I had the honor to inform the department in my last report that this part of the work was nearly completed. There still, however, remains something to be done before this branch of the improvement can be considered perfect. This was pointed out to the superintendent, who immediately caused the machine boat, with an adequate company, to proceed upon this duty, under the command of an individual perfectly acquainted with the river, with instructions to commence at Nashville island, and, in descending, to remove all snags, sunken logs, projecting trees or fallen timber, and all detached rocks, which might interfere with or interrupt the future navigation.

My last report contained a list of such places as were capable of being improved. I beg leave here to call the attention of the department to those works which, according to the plan of improvement suggested in the original project, come next in order. These are, a dam at Sycamore creek; one below the mouth of Harpeth river; one at Palmyra island and at Dover shoals; one at Shelly's island; and one at Ingraham's shoals. Further blasting of the point of rocks at the Devil's chute is necessary; and a similar work at Camp Rowdy will be attended with equally beneficial results. These works are indispensable to develop fully the advantages of the improvement effected at Flax patch, Harpeth shoals, Davis's ripple, Linc island, and the Devil's chute, as there is now more water at these places than at those before mentioned. There remains at this time unexpended, of the former appropriation, about \$11,000. Five thousand dollars will be expended during the fourth quarter of 1835 on the works now progressing; there will then remain \$6,000 available for the ensuing year, and applicable to the projected work. This sum is wholly inadequate for their construction; a further estimate will be made by the superintendent for \$30,000, to be applied to that object. I have not the data necessary for estimating minutely the probable cost of the contemplated works; but from the extent of the improvements of which the Cumberland is capable, there will be ample room for applying the surplus advantageously, should the amount called for by the superintendent exceed that which shall be found necessary for completing the dams.

As these works form a prominent part of the system commenced for the improvement of the Cumberland, and as but little advantage can be derived from what is already done, unless the system be carried through, the necessity of the appropriation is obvious.

I have the honor to be, sir, very respectfully, your obedient servant,

A. H. BOWMAN, *Lieutenant of Engineers.*

General CHARLES GRATIOT, *Chief Engineer.*

P.

CUMBERLAND ROAD OFFICE, *Columbus, Ohio, October 12, 1835.*

SIR: I have the honor to present my annual report of the condition of that portion of the Cumberland road in Ohio, under the control of the United States, exhibiting the progress made in its construction since the 30th of September, 1834.

SECOND DIVISION.—Embraced between the town of Zanesville and the city of Columbus.

Masonry.—The several structures between the 22d and 53d miles, inclusive, have been thoroughly repaired and pointed, preparatory to this part of the road being delivered up to the State.

Carpentry.—The wooden superstructure of the bridge over the south fork of Licking creek, on the 25th mile, has been repaired and strengthened by additional braces to secure it against lateral motion. Some slight repairs were made to the bridge over the canal feeder, on the 32d mile, and others will be required to the flooring of those over Black Lick, Big Walnut, and Alum creeks, previous to their being turned over to the State.

Covering.—The third and last stratum of metal was placed upon eleven miles of the road, viz: Between the 22d and 32d miles, inclusive, during the winter and the early part of the spring of this year; and this portion of the road was received by the governor of the State in the month of May. From the 32d mile to this place, a distance of twenty-one miles, nearly the whole of the metallic covering has been prepared for the three strata. On the 30th of September seventeen miles of this portion were covered with six inches of prepared gravel and quarry limestone, leaving but four miles without any metallic cover. The whole of this division of the road would have been completed, so far as regards the first two strata of metal, early in the last month, had not the unusually wet weather experienced this year retarded this branch of our operations from the very commencement of the working season. Much greater difficulties have been encountered than was at first anticipated, in procuring a sufficient quantity of gravel for the covering, having nearly exhausted the whole district of country between the Licking canal feeder and this city of that material, in obtaining the required amount of stone for the completion of this

section. Such progress, however, has been made in the work as to warrant the belief that this division will be finished and placed under the control of the State in the course of the next month.

The quantity of metal prepared for the second division since my last annual report is 18,920.66 rods, or 62,438.17 perches of 25 cubic feet.

Graduation.—The side ditches and slopes of the road between the 22d and 32d miles, inclusive, were prepared previously to this portion being turned over to the State. The shoulders and drains of the remaining part of this division will require some repair upon its final completion.

THIRD DIVISION.—Embraced between the city of Columbus and the town of Springfield.

Masonry.—The abutments and pier of the bridge over the Scioto river are in a rapid state of forwardness, and it is expected will be finished the present month. The masonry between Columbus and Jefferson has undergone a thorough revision. All the culverts and one bridge have been entirely rebuilt, and such portions of the other structures as were found to be defective have been taken down and renewed.

Between Jefferson and Springfield the masonry is nearly completed, and should the weather prove favorable for the remainder of the working season, it is confidently anticipated that the whole of the masonry on this division of the road will be brought to a close.

Carpentry.—The wooden superstructure of the bridge over the Scioto river is nearly raised; it will be roofed and the flooring laid in all the month of November, so to admit the travel over it, if necessary, at that time.

This structure will be finished the present year if the weather is favorable for out-door operations. The bridges over Big and Little Darby creeks have been strengthened by upper lateral braces. That over the latter stream will require still further repairs the ensuing year, to counteract the tendency it has to twist, caused in a great measure by the weakness of the wooden arches connected with the truss frames. The bridge over Beaver creek, on the 37th mile, is raised, and will be completed in the next month. Part of the timber for that over Deer creek, on the 22d mile, has been collected at the site of the work, and piled for seasoning and preservation from the weather.

Covering.—The greater part of the material for the first and second strata of metal between this place and Jefferson, a distance of fourteen miles, has been prepared, and upwards of four miles have been covered with a depth of six inches of stones. Every exertion will be made to get as great an extent of this division of the road covered the present season as the state of the weather and our limited means will permit. The whole of the third stratum of metal has been prepared for the three miles immediately west of this city. The quantity of metal prepared for the third division is 7,859.09 rods, 25,935 perches of 25 cubic feet.

Graduation.—The graduation of twelve miles of the road between Jefferson and Springfield was finished on the 30th ultimo; six more will be completed the present month, and another mile in the month of November; making in all nineteen miles, and leaving ten still to finish. It is to be regretted that the want of funds will compel us to defer the completion of this part of the work for another year, as part of the district, yet untouched, involves very considerable excavation and embankment, the latter of which it is all important should be made this winter, in order that the necessary subsidence may take place previous to this portion of the road receiving the cover of metal proposed to be placed upon it the next season.

FOURTH DIVISION.—Embraced between the town of Springfield and the Indiana State line.

Masonry.—An arched culvert has been built over Mill run, in the town of Springfield. About forty rods of graduation have been completed to the east of this structure, being an extension of the graduation of South street, from the termination of the third division. Sixty rods to the west of the culvert will be finished and gravelled this month, which will include nearly the whole of the graduation to be done in the town.

Clearing and grubbing.—Six miles of clearing and grubbing were completed last year after the 30th of September, which, with the six miles previously reported as finished, make twelve miles of this section of the road opened, and leaving nearly forty-two miles still to clear and grub.

Congress, at its last session, having directed that a review of the line of the road between Springfield, Ohio, and Richmond, in Indiana, should be made, our operations on this division were necessarily suspended until the final result of this reconnaissance should be made known, in compliance with the instructions of the department to me on that subject, under date of the 16th of March last.

The project of operations for the year 1836 is as follows:

THIRD DIVISION—Masonry.—To repoint the masonry between this place and the twenty-fourth mile, previous to this portion of the road being delivered up to the State.

Carpentry.—To complete the wooden superstructure of the bridge over Deer creek, and make the necessary repairs to those across the Darbys.

Covering.—To complete the first and second strata of metal to Jefferson, and to prepare and put on the same depth of covering from thence to Springfield; subsequently to prepare and put on the third stratum of metal from Columbus to the twenty-third mile, inclusive, and deliver this part of the road up to the State.

Graduation.—To complete the graduation of that portion of the road unfinished between Jefferson and Springfield, and make the necessary repairs to those sections turned over to the State.

FOURTH DIVISION—Masonry.—To complete the masonry between Springfield and the twentieth mile, inclusive, west from thence.

Carpentry.—To complete the wooden superstructures of the bridge over Mad river, those over Donnel and Jackson creeks, across the Great Miami river, and the canal where it intersects the road.

Graduation.—To complete the graduation between Springfield and the twentieth mile, inclusive, west from thence.

Clearing and Grubbing.—To complete the clearing and grubbing through the State.

Causes which have operated against the advancement of the work.—Early in the spring, and during the greater part of the summer, grain of every description was held at so high a price as to deter most persons owning teams from bringing them on to the road, without the expectation of a considerable advance upon our usual rates of hauling. In fact, the value of this species of labor was so much enhanced as to induce us to curtail, as far as was consistent with the nature of our operations, this most expensive part of the work until after the season of harvest.

Another cause which has operated most materially against us, and which has tended to swell the costs of this particular labor, as well as that of every other, is the succession of wet weather, by which the roads during the greater part of the summer months were kept in as wretched a condition as they are

usually left upon their breaking up after the winter. This has added greatly to the expense of the masonry and covering, the materials for both having to be hauled considerable distances, particularly for the former work, the transportation of the stone for one structure being twenty-five miles. A heavy expenditure, consequent upon this most remarkable season, was the loss of labor in preparing the surface of the road again and again for the reception of the metallic cover; the frequent rains, with the increased amount of travel, having destroyed the graded surface before it could be covered with metal. This has been so great an evil on the division of the road west of this place as to compel us to prohibit the travel upon it until the metal is put on.

Sickness, too, has been more than usually prevalent along the line of the road, induced, no doubt, by the humidity of the atmosphere and the sudden changes of temperature.

From all these causes combined the progress of the road this season has not been as great as was anticipated, although the amount of work done, as is shown by the exposition of the state of our operations, exceeds very considerably that of any former year.

Resources of the country as regards materials.—That portion of the second division embraced between the thirty-second mile and this city. Sandstone for building is found at different distances from the line of the road, but generally of a very inferior quality. A few detached masses of limestone have been discovered, but not in sufficient quantities for any of the purposes of the road. Lime has therefore to be brought from the third division of this section. Sand in considerable varieties is found at the streams crossing the line of the road, some of which are pretty clean and sharp, but generally of too fine a grain for stone mortar. There being no quarry stone suitable for metal for the cover of the road, recourse has been had to the gravel banks lying north and south of the line of the road for a material for that purpose. This gravel is of various qualities, being a mixture of sandstone, slate, and limestone, the latter predominating the nearer we approach the city. The material thus procured was passed through iron screens, in order to free it from sand and clay, and subsequently broken to the prescribed weight of four ounces.

Lumber.—Elm, beech, hickory, and the different varieties of the oak, walnut, maple, ash, and locust are found in greater or less abundance throughout this section.

THIRD DIVISION.—Limestone, of an excellent quality and in large masses, for building, is found at the eastern extremity of this division, and from a quarry three miles west of this place we have drawn our principal supply of materials for the construction of the bridges and culverts to the twenty-eighth mile; from thence to Springfield the stone has been supplied from a quarry two miles west of that town. The Darbys, which it was supposed would furnish an abundant supply of good building materials, have failed almost entirely in this respect, the stone being inferior in quality and of bad shape for constructions. After a considerable expenditure of money, we were obliged to abandon those quarries, on account of the great cost in working them. For twenty-nine miles of this division no quarry stone is to be found. Lime of a very good quality is to be had in abundance and at a cheap rate. Building sand, of a suitable grain for stone mortar, and pretty free from loam, is procured from the Scioto river and its neighborhood, and in the vicinity of the Darbys and Springfield. Stone for the metallic covering between this city and Jefferson is obtained from the quarries and gravel banks, the latter of which furnish nearly a pure limestone. Between Jefferson and Springfield our chief dependence must be upon the gravel banks for a material for the cover of this section of the road. These banks have yet to be explored; the estimate for this particular part of the work is based upon some uncertainty, and may vary in amount. The same description of lumber is found on this division as on the second.

FOURTH DIVISION.—Limestone in abundance, it is supposed, will be found on this division, not only for building, but for the cover of the road. Lime can be had at a reasonable rate. Sand for mortar, it is presumed, can be obtained at the principal streams to be crossed.

In addition to the timber specified as growing on the second division is to be added white and yellow poplars, which are found west of Mad river.

Plan of administration.—The superintendent, aided by three assistants, one inspector, one superintendent of masonry, and five principal overseers, supervise the operations on the road. Two clerks are employed in the office.

Accompanying this report is an estimate in detail of the funds required for carrying into effect the project of operations for the year 1836. This estimate may seem large, but it is not greater than the steady advancement of the work requires, and it is therefore hoped that the sum asked to be appropriated by Congress for the road in this State the coming year may not be less than the amount named in the estimate.

The annual statement of the operations on the road up to the 30th of September, 1835, showing the cost of the several parts of the work, will be forwarded to the department as soon as the necessary data can be obtained from the disbursing agent at this place.

In conclusion, I would respectfully urge the necessity of an early appropriation as of vital importance to the progress as well as the interests of the road.

All which is very respectfully submitted.

H. BREWERTON, *Lieutenant of Engineers.*

Brigadier General C. GRATIOT, *Chief Engineer, Washington.*

Q.

Report on the progress made in the repair of the Cumberland road east of the Ohio during the year ending 30th September, 1835.

BROWNSVILLE, *Pennsylvania, September 30, 1835.*

At the date of the last annual report on the repairs of the Cumberland road east of the Ohio the operations were progressing rapidly under an appropriation of three hundred thousand dollars to finish the road from Cumberland to Wheeling, on such a reduced scale and modified plan as this limited sum, not half the estimated amount, would effect. Contracts had been made in August of 1834, under that appropriation, for finishing the grade of the new route near Cumberland; constructing the masonry and wooden superstructure of the bridges over Will's creek and Braddock's run; grading 48 miles of road in Washington county, Pennsylvania, and Ohio county, Virginia; and for putting on a stratum of metal the

whole length of the road. These contracts were principally carried into effect by the close of the year 1834, and finished, excepting the bridges, in the spring of this year, 1835, when the whole road from Cumberland to Wheeling was graded and covered, with Macadam metal, varying in thickness from three to nine inches.

In March, 1835, an appropriation was made of \$346,186, to complete the repairs on the plan originally contemplated, with a proviso that no part of this sum should be expended until the road was surrendered to, and accepted by, the State through which it passed.

On the 18th of April information was received that the road had been accepted by the States, and commissioners appointed to erect toll-gates and houses, and collect toll. Further progress was at once put a stop to in the construction of the bridges near Cumberland, the timber for which had all been procured and partly worked.

By the first of May contracts were concluded for putting on a stratum of metal in Pennsylvania and Maryland, and in August for putting on another stratum, being the last required to bring the whole road to a uniform thickness and strength of nine inches of good limestone metal.

The work in the State of Virginia passed from under my superintendance into the hands of the commissioners of that State, who have since carried into effect the arrangements and system I had adopted, and made contracts so soon as being appointed for putting on a stratum of metal through that part of the road. By the 30th of September the contracts for the first stratum of metal had been principally completed, and considerable progress made in the execution of the second and last stratum. The masonry of the bridges near Cumberland, on the original plan of stone arches, being remodified to suit the changes introduced by the changes of last year, to wooden superstructure, was put under contract, and two of them so far progressed with as the completion of the arches. The third or large bridge, over Will's creek, was put under contract late in the season; the centre pier only was required to be built this fall, time not being sufficient to prepare the stone and close the arches before the climate puts a stop to mortar masonry. The arch stones of this bridge are preparing, and the whole structure is to be finished by next July.

The Dunlap's creek bridge was also put under contract late in the season, on account of the difficulty of obtaining the right of way and ground for the wing walls in Bridgeport; local interests, coming in collision with the public good, arrested the progress of this work to so late a period that the foundation of the southern abutment only has been secured. This work will be finished next season, and promises to be a good specimen of the art of masonry, being composed of blocks of stone of not less than fifteen cubic feet, and so well-jointed throughout the whole mass as to admit of a cask of cement in laying twenty perches.

The masonry of the parapets of the old bridges and culverts in Washington county has been repaired in some cases by rebuilding the whole parapet with new materials, and in other cases relaying the old coping. In Fayette county the parapets have been partially repaired; they remain to be finished next season, as as the case also with those in Maryland. The quantity of work done during the year consists of quarrying, hauling, breaking to four ounces, and putting on the road, two hundred and twenty-eight thousand perches of metal; preparing forty thousand other perches of metal on the side roads ready to put on; delivering twenty-eight thousand seven hundred perches of stone on the side roads to be broken to four-ounce metal; constructing four thousand seven hundred and thirteen perches of masonry in bridges, culverts, and parapet walls; cutting and laying three thousand six hundred and fifty-four feet (running measure) of heavy coping; and relaying twelve hundred and seven feet of old coping.

There remains to be executed at the present time, to complete the work, the contracts for the last coat of metal, now in rapid progress, making up the side roads, and opening thoroughly the water ways that are now under contract to be finished by the 30th November, and the masonry of the bridges, as before stated.

All of which is respectfully submitted.

R. DELAFIELD, *Captain of Engineers.*

Brigadier General C. GRANT, *Chief of Engineers.*

Annual statement exhibiting the progress made in the repairs of the Cumberland road east of the Ohio, to the 30th September, 1834, as also the progress made during the year ending 30th September, 1835, and the application of the balance of the appropriation remaining on hand on the 30th September, 1835.

Amount in hands of the agent on the 30th of September, 1834.....	\$45 69
Amount in treasury undrawn on the 30th September, 1834.....	230, 000 00
Amount of tolls, stocks, &c., sold during the year ending 30th of September, 1835.....	584 08
Amount of appropriation for the year 1835.....	346, 186 58
Amount available for the fourth quarter of 1834, and the year 1835.....	576, 816 35
Amount in treasury undrawn on the 30th September, 1835.....	12, 235 03
Amount in hands of the agent on the 30th September, 1835.....	167, 557 90
Amount available for the fourth quarter of 1835, and final completion of the work.....	179, 792 93

State of the work on the 30th September, 1834.

Up to this period the following quantities of work have been executed:	
Perches of stone delivered on the road side.....	32, 127
Perches of stone broken to four ounces, and ready to put on.....	49, 615
Rods in length of road graded ready to receive the metal.....	19, 803
Rods in length of road covered with three inches of metal.....	1, 216
Rods in length of road covered with four and a half inches of metal.....	6, 149
Rods in length of road covered with six inches of metal.....	2, 688

R. DELAFIELD, *Captain of Engineers.*

Brigadier General C. GRATIOT, *Chief Engineer.*
BROWNSVILLE, November 6, 1835.

R.

PHILADELPHIA, November 23, 1835.

SIR: I have the honor to submit the following statement, showing the results of a portion of the observations made during the last season, for determining the latitude of certain points connected with the settlement of the northern boundary of Ohio, as required by the act of July 14, 1832.

The results are deduced from taking the mean of a number of observations on twenty fixed stars. The very near coincidence in the deductions made from each observation on the same star; as also their accordance with other results, obtained from a series of observations on other stars, which have also been calculated; induce me to believe that the latitudes of the several points are true to the nearest second.

1. The most southern extreme of Lake Michigan is in latitude 41° 37' 07" N.

The greatest difference, arising from a comparison of the observations, being 03.05"; and the greatest difference from the mean result, 01.17".

2. From observations upon a portion of the same stars, made on the Maumee river, near the east line, recognized as Fulton's, where that line crosses the Maumee, and referred to said line, the latitude is found to be 41° 37' 8" N., or about 101 feet north of the parallel tangent to the south bend of Lake Michigan.

This result is obtained from a mean of five determinations; the greatest difference found, on comparing the observations, being 01.67", and the greatest difference from the mean result 00.98".

3. The north cape of the Maumee bay is in latitude 41° 44' 7" N.

This result is obtained from a series of observations made on fourteen different stars, the greatest difference, as before, being 02.56", and the difference obtained, from a comparison with the mean result, being 01.50".

The observations from which the above latitude is deduced were made on Turtle island; the difference of latitude having been determined trigonometrically.

The latitude of the astronomical station on Turtle island, Maumee bay, is 41° 45' 12" N.

4. For the determination of the latitude of the most southerly point of the boundary heretofore established between the United States and Canada, in Lake Erie, two positions were chosen:

The first, 2½ miles east of Huron, Ohio, on the margin of the lake, and in the immediate neighborhood of its most southwardly bend. The result of the observations made at this station fixed the latitude of the most southerly bend of Lake Erie at 41° 22' 54" N.

The second position was taken at Point Pele, Canada, nearly due north of the first position. From a series of observations made at this station, it is found that the southern extreme of Point Pele is in north latitude 41° 53' 59"; and further, that it appears from the results of the survey and triangulation, connecting this station with Point Pele island, that Point Pele, when surveyed under the orders of the commissioners appointed to settle the position of the territorial line between the United States and Great Britain, under the treaty of Ghent, projected much further into the lake than it does at present; and that, as near as it can be ascertained from a comparison of the two surveys, this point in 1818 was in north latitude 41° 52' 24".

The latitudes of the two last mentioned points furnish the data from which the most southwardly point of the territorial boundary in Lake Erie must be determined, because "a line along the middle of Lake Erie" must make its greatest southing between these two points.

Before this latitude can be determined, however, the principle which governs in its location must be established. A middle point on the meridian, between the two shores, is found to be in latitude 41° 38' 26.5" north, from a portion of the data given above. A middle point on the same meridian in 1818 was in latitude 41° 37' 39" north, deduced from another portion of the same data; now a line dividing the lake into two equal parts and perpendicular to lines radiating from Point Pele is found to be in north latitude 41° 33' 15".

In 1818 it is found in latitude 41° 32' 44".

It will be observed that in both cases, under the first construction of the language used in the decision of the commissioners, relating to the territorial boundary, the due east line from the south bend of Lake Michigan will pass south of said territorial line; and that under the last construction, in both cases, the territorial line will be intersected by a line running due east from the south bend of Lake Michigan.

For the longitude of the several points above mentioned I have the honor to refer to my report furnished in January, 1834.*

I have the honor to be, very respectfully, your obedient servant,

A. TALCOTT, *Captain of Engineers.*

General C. GRATIOT, *Chief Engineer.*

S.

UNITED STATES MILITARY ACADEMY.

Report of the Board of Visitors invited by the Secretary of War to attend the general examination of the cadets of the United States Military Academy.

SIR: The undersigned having attended the general examination of the cadets of the United States Military Academy as a board of visitors, submit the following report as the result of their observations.

The board directed their inquiries to the course of instruction, both military and scientific, and to the internal police, discipline, and fiscal concerns of the institution. In making these inquiries every facility was afforded by the superintendent and members of the academic staff. In order that these inquiries

might be prosecuted with greater advantage, committees were appointed by the board, with instructions to inquire especially into the portion of the foregoing subjects, referred to them respectively, and to report the result of their observations.

The reports of those committees, which are herewith transmitted, will convey to you much information in detail, which could not conveniently be embodied in this report.

As this is professedly a military institution, the attention of the board was first directed to the course of military instruction. Although this branch embraces a wide field, it is intended to speak of it as limited to engineering, artillery, and infantry tactics.

Engineering is divided into two branches—civil and military; and, in connexion with the latter, is taught the science of war, so far as it relates to the attack and defence of military positions, and the providing of defensive means for an army operating in the field.

In the course of civil engineering is taught the properties, preparations, and use of materials of construction; elementary parts of buildings, and the art of construction generally, including decorative architecture; the manner of laying out and constructing roads, the construction of the various kinds of bridges, the general principles which regulate the removal of obstructions that impede the navigation of rivers; the survey, location, and construction of canals and railroads; and the formation of artificial and the improvement of natural harbors. This branch is taught to the first or graduating class, by lectures, and a series of drawings and notes, prepared by the professor from the best authorities, and lithographed at the press belonging to the institution, under the title of "Outlines of the Course of Civil Engineering." Drawings, illustrative of the prominent parts of the subject, are executed by the cadets; and these exhibit great neatness of execution, as well as much precision and detail.

Next in order is the course of military engineering.

This comprises field and permanent fortification. In the first are taught, to the same class, the principles which regulate the construction of field entrenchments; the different kinds of lines; batteries for the various kinds of ordnance; the armament of entrenchments, with reference to the attack and defence; enclosed and detached works; defence of posts, and the construction of military bridges; permanent fortification, including a complete description of the bastion front; the attack and defence of the same; a critical examination of the principal systems of fortifications; the construction and armament of a fortress; the hydraulic works used in the defence of military positions; mining; the principles of defilement and their application to works constructed for inland and maritime defence. Military engineering is taught from a text-book, and from notes prepared with judgment and skill by the professor; the whole being amply illustrated by drawings, executed by the students under the immediate supervision of instructors.

To the professional ability of the professor to whom this department is confided, the very able and satisfactory manner in which his pupils acquitted themselves in the various parts of their course at the black board, in presence of the visitors, afforded the most pleasing and ample testimony.

No changes either in the course of study or organization are at present contemplated, nor are any deemed necessary. The board, however, would recommend the continuance of small appropriations of money by Congress for the purpose of providing the department with such works and models as the professor may from time to time require.

Instruction is given to the cadets of the first class in artillery tactics during the encampment, which usually commences in June and terminates on the first of September following. During this time they are required to recite upon a system of field artillery, at the same time that they are taught a course of pyrotechny, mortar exercise, and target practice, with guns of various calibre, as well as mortars and howitzers. Cadets of the other classes are also taught the drill of field artillery during the suspension of the other academic studies.

It is thought by the officer at the head of this department that the time allowed for recitation is insufficient, and that much which ought to be studied thoroughly is necessarily passed over rapidly.

In our country there is no establishment provided by law especially for instruction in artillery. All the education our officers receive in this branch of study is, with the exception of the mere drill of an artillery garrison, obtained at this place. This deficiency would seem to suggest the importance of placing this department of the academy upon a more enlarged and permanent basis.

It is the opinion of the board that it would be greatly to the advantage of this course of instruction if a permanent assistant were attached to it, instead of the mode now in use of detailing cadets from the graduating class.

In connexion with this subject the board would remark that the moving of ordnance on the field by the bodily exertions of the cadets alone is a requisition upon them of great severity, and is at the same time obnoxious to the objection that it keeps the cadets entirely unskilled in the only mode of using the field piece employed in actual service. The board would, therefore, suggest the propriety of procuring a number of horses sufficient for artillery exercise, and also for instruction in cavalry tactics.

The same horses would be used for both purposes and the number required would not exceed forty.

Cavalry tactics have never been taught at this academy. Cavalry as an arm of national defence is confessedly of great importance. It is submitted whether instructions in that branch might not be advantageously added to the course of instruction at this institution.

The ordnance stores furnished for the year are good in quality and sufficient in quantity. Some field pieces and guns of different calibre are wanted to render this department complete, which are particularly detailed in the report of the committee on this subject.

On drill and in firing in the field the cadets exhibited a thorough knowledge of the manoeuvres and evolutions in this important arm of service, and in their drawings and mathematical demonstrations at the black board they evinced high proficiency in the theory and practice of gunnery. Their target firing and accuracy of throwing shells are very commendable, and afford unequivocal evidence of great zeal and ability on the part of the instructor, for which he is entitled to much credit.

The corps of cadets, organized as a battalion of infantry, exhibits on the field a perfect knowledge of infantry tactics, and performs all the evolutions of the line and of the battalion with facility and accuracy. Their appearance in dress, in the condition of their arms and accoutrements, as well as in soldier-like bearing, is highly gratifying and deserves much commendation, whilst it reflects much credit on the experienced officer who commands them.

With regard to the course of study in the other branches which are taught, agreeably to the regulations of the institution, the board was well satisfied with the abilities and zeal of the professors and their assistants.

Besides the branches already mentioned, the cadets of the first or graduating class were examined on moral and political science, and on mineralogy and geology, on all of which they exhibited attainments that could only be the result of much attention on their part, aided by skill and perseverance on the part of the professors and their assistants.

In moral and political science the first class was subjected to a satisfactory examination. The familiarity they evinced with the several systems of ethics propounded by distinguished masters at different periods showed that their minds had been effectually directed to the distinguishing characteristics of those systems, and their relative merits closely compared by them and familiarly understood. The examination on the subject of government and constitutional law was highly gratifying, with room, it is true, for slight shades of difference in opinion on the latter topic; the discussions and replies of the class were such as showed a just comprehension of the nature and objects of civil government in general, of the peculiar and unique and happy system under which they live; qualifying them at once for a participation in the pursuits of civil and political life, and teaching them duly to appreciate the blessings of those institutions which, as soldiers, they may be called upon to defend.

The second class was examined on natural and experimental philosophy, on chemistry, and drawing. On these branches the proficiency of the cadets was quite creditable to themselves and to their instructors. The knowledge which the pupils seem to have acquired in the important branch of chemistry, not only of its general principles, but of their application in detail, was gratifying. The specimens of drawing by the cadets exhibited to the board showed a practical acquaintance with this branch, which demonstrated that they are fitted at once to apply their acquirements to purposes of practical utility.

The third class was examined in mathematics, in the French language, and drawing.

The fourth class in mathematics and the French language.

It has often been remarked that in no school is the mathematics more thoroughly taught than at this institution. The correctness of this remark was quite manifest during the present examination whenever mathematics or any other branch dependent on that science was under consideration.

The examinations on the French language were very satisfactory. To those acquainted with the language there appeared by the course of instruction to be imparted to the student a thorough knowledge of the principles of the language.

Some of the members of the board had an opportunity of witnessing the proficiency of the cadets under the instructions of the sword master. It was thought to be quite creditable. Whilst the instructions of the sword master secure to the officer and soldier the best means of personal defence, the exercise connected with them is well fitted to improve the health and to impart to the muscular system tone and vigor.

As connected with the course of study, the board has thought proper to remark that a good library and a chemical and philosophical apparatus are essential aids in imparting scientific instruction. It is believed an important benefit would be conferred on the institution by adding to the library some of the periodical works which contain the earliest, and at the same time the most learned, dissertations upon the improvements of the day.

The situation of the professorship of chemistry it is thought might be placed on a better footing. At present it is subsidiary in every respect. It is recommended that it be placed on an equality with the independent professorships, and that there be two assistants, one of whom should be the professor of mineralogy. The whole course of study as conducted, it is believed, is well fitted to create a fund of information which cannot fail to be of inestimable value to our country in a civil as well as a military point of view.

The attention of the board was directed to the course of religious instruction. This course is necessarily of vital importance. During the present visitation the chaplain, to whom this department is entrusted, has been under arrest. There was, therefore, no opportunity of witnessing the manner in which the duties belonging to this department are performed. The importance of the duties to be performed by the chaplain has induced the board of visitors to recommend that the Secretary of War institute an inquiry into the causes which have led to a suspension of the performance of those duties.

With regard to the internal police, it is entitled to high approbation. The condition of the hospital is fully suited to the object of securing to the cadets all the comforts and all medical aid that they can require in ordinary cases of indisposition. Clean, well ventilated, and properly attended by nurses, nothing need be added on these heads; recent circumstances, however, have suggested the propriety of enlarging the number of surgical instruments.

The south barrack, which is the oldest building of the kind at this post, is badly constructed. The rooms are too small, and they are injudiciously disposed. It is recommended that they be rebuilt.

Both barracks present an air of cleanliness and order that reflects credit on all concerned.

The steward's hall, where the cadets mess in common, was visited. It was found that the cadets are supplied with good and wholesome food.

A building for a chapel has been commenced, and it is thought will be completed this year.

The storehouse is an old and very insecure building, and altogether unfit for the use to which it is applied; a new one is recommended for the safe keeping of the stores deposited there.

The fiscal concerns of the institution were brought to the notice of the board. The disbursements are found to be made in accordance with the appropriations made; and a system of order and economy prevails. A building for military and other exercises, so requisite for the successful prosecution of military knowledge during the inclement season of the year, and to the health of the cadets, has been commenced under the appropriation for that purpose.

An improvement is recommended in the apartments appropriated to the use of the chemical laboratory, library, and philosophical apparatus. They are too small, and exposed to danger in making chemical experiments.

The teacher of drawing is entirely destitute of the convenience necessary to the practice, study, and, of course, improvement in his profession. The building of an apartment for that purpose is recommended, the estimated expense whereof will not exceed eight hundred dollars.

In the accounts of the treasurer and quartermaster the expenditure appears to be rigidly confined within the appropriation. The whole fiscal arrangement meets the entire approbation of the board. The attention that is paid to economy in all the details of the institution is very satisfactory. There remains in the treasury an unexpended balance of the appropriation of last year of eight thousand dollars.

Upon the whole, the board is of opinion that the institution is well conducted; that the objects to be attained by its continuance are of very great importance to the community. Knowledge is obtained by

means of this institution which is indispensable to the successful conduct of military affairs. Not only is the knowledge imparted to those educated here valuable in time of war, but, should a state of war be looked upon as remote, the knowledge acquired is scarcely less valuable in time of peace, when applied to the prosecution of the various improvements which are so rapidly developing and enlarging the resources of our country. But the hope that peace shall be perpetual should not be indulged to our detriment. The means most essential to the resistance of aggression should always be within our reach. The humiliating disasters, the waste of life and treasure, that marked the commencement of the late war, for want of a knowledge of what should be deemed the elementary principles in the science of war, are still fresh in the recollection of many. This institution it is believed is well fitted to obviate the recurrence of such calamities from the same cause. At an expense less than is requisite to keep in commission a frigate of the largest class, knowledge of the science of war, in principle and in practical detail, is imparted to a sufficient number of citizens of our own country to enable us in any emergency to conduct our military operations on a footing of equality with the most skilful enemy. When it is considered that success in war is slightly dependent on either the numbers or courage of the parties, but is most generally the result of the scientific and skilful combinations of causes, the effect of which is foreseen and calculated almost with the precision of a mathematical problem, it would be a source of most painful reflection that a country justly proud of its freedom and liberal institutions should, for want of appreciating the knowledge necessary to the defence of that freedom and those institutions, permit itself to be placed at the mercy of the enemies of all liberty and liberal institutions. It cannot be denied that those governments most hostile to liberty at the present day are most ready to appreciate and to appropriate all the aids that can be derived from science and applied to the art of war. How important that those countries blessed with freedom should keep themselves on a footing of equality, not in the largeness of their armies, but in the knowledge necessary to the formation of armies, and to direct them, when formed, with efficiency. The knowledge imparted at this institution to the children of our own citizens, selected from every part of the country, is so indispensable to our security, that to dissolve it without providing a substitute possessed of advantages equal or preferable would seem like retrograding from civilization towards barbarism, and well calculated to endanger our national independence.

REPORTS OF COMMITTEES.

Military instruction.

UNITED STATES MILITARY ACADEMY, *West Point, New York, June, 1835.*

SIR: The committee whose attention has been directed by the board to the department of military instruction in the academy have the honor to submit the result of their inquiries.

The great and leading objects of the institution being essentially military, it became a question of some interest to the committee to ascertain the subjects to be embraced within the range of their investigation. Were these to be determined by considerations of their obvious importance in the formation of a military character, the committee are of opinion that their report should present a review of every branch taught at the academy, for nothing has come to their observation that could, without disadvantage, be omitted. The appointment of other committees, however, renders it obvious that such was not the intention of the board, and they have accordingly limited their examinations to the departments of engineering, artillery, and infantry tactics.

The course of engineering is divided into two branches—civil and military; and in connexion with the latter is taught the science of war, so far as it relates to the attack and defence of military positions and the providing of defensive means for an army operating in the field.

In the course of *civil engineering* are taught the properties, preparation, and use of materials of construction; elementary parts of buildings and the art of construction generally, including decorative architecture; the manner of laying out and constructing roads; the construction of the various kinds of bridges; the general principles which regulate the removal of obstructions that impede the navigation of rivers; the survey, location and construction of canals and railroads, and the formation of artificial and the improvement of natural harbors. This branch is taught to the first or graduating class by lectures and a series of drawings and notes, prepared by the professor from the best authorities, and lithographed at the press belonging to the institution, under the title of "*Outlines of the Course of Civil Engineering.*" Drawings illustrative of the prominent parts of the subject are executed by the cadets, and these exhibit great neatness of execution as well as much precision and detail.

Next in order comes the course of *military engineering*. This comprises *field and permanent fortifications*. In the first are taught, to the same class, the principles which regulate the construction of field entrenchments; the different kinds of lines; batteries for the various kinds of ordnance; the armament of entrenchments, with reference to the attack and defence; enclosed and detached works; defence of posts and the construction of military bridges. *Permanent fortification* includes a complete description of the bastion front, constructed according to the principles of Vauban and Cormontaigne; the attack

and defence of the same; a critical examination of the principal systems of fortification; the construction and armament of a fortress; the hydraulic works used in the defence of military positions; mining; the principles of defilement and their application to works constructed for inland and maritime defence. Military engineering is taught from a text book, translated from the French of Gay de Vernon, by M. O'Connor, and from notes, prepared with judgment and skill by the professor; the whole being amply illustrated by drawings, executed by the students under the immediate supervision of instructors.

This department is confided to the care of Professor D. H. Mahan, to whose professional ability the very able and satisfactory manner in which his pupils acquitted themselves in the various parts of their course at the blackboard, in presence of all the visitors as well as the committee, afforded the most pleasing and ample testimony. No changes, either in the course of study or organization, are at present contemplated, nor are any deemed necessary by the committee. They would, however, suggest to the board the propriety of recommending the continuance of small appropriations of money by Congress for the purpose of providing the department with such works and models as the professor may, from time to time, require. Models, illustrative of the subjects of architecture and engineering, facilitates greatly the labors of both instructor and pupil and are indispensable to thorough instruction.

The committee next went into an examination of the department of artillery, and find that instruction is given in artillery tactics to the cadets of the first class during the encampment, which usually commences in the month of June and terminates on the first of September following. During this time they are required to recite upon a system of field artillery, abridged from Lallemand, at the same time that they are taught a course of pyrotechny, mortar exercise, and target practice with guns of various calibres, as well as mortars and howitzers. Cadets of the other classes are also taught the drill of field artillery during this suspension of the other academic studies.

At the commencement of the academic term in the fall, about two months are devoted to the study of the theory and practice of artillery, and the fabrication of cannon, &c., and from one month to six weeks in the spring to a review of the same subjects, preparatory to the June examination.

It is thought by the officer at the head of this department that the time allowed for recitations, considering the difficulties and importance of the course, is insufficient, and that much which ought to be studied more thoroughly is necessarily passed over rapidly.

Artillery in Europe is considered a most important arm of service, and much time and expense are devoted to its improvement. In our country there is no establishment provided by law especially for instruction in artillery, and all the education our officers receive in this branch of study is, with the exception of the mere drill of an artillery garrison, obtained at this place. This deficiency would seem to suggest the importance of placing this department of the academy upon a more enlarged and permanent basis.

It is also thought by the same officer, and approved by the opinion of your committee, that it would be greatly to the advantage of this course of instruction if a permanent assistant were attached to it. If practicable this should be done with as little delay as possible. It has been customary to detach several cadets from the graduating class, who are detained here during the encampment to aid in hearing recitations and in giving practical instruction, but in the opinion of your committee this is obviously objectionable. These assistants are still cadets in feelings, and those whom they instruct regard them as equals and companions. Nor is it probable they feel the responsibility that should influence an instructor, owing to their connexion with the department being so brief. One other circumstance which induces the committee to urge this point is the fact that, in addition to his appropriate duties, the officer at the head of the department is also charged with the command of the United States troops on this station.

The supplies of ordnance stores furnished for the year are good in quality and sufficient as to quantity, and within the last year the department has been amply supplied with mortars and guns of heavy calibre, whilst a requisition for field pieces has not been complied with, owing, it is thought, to the circumstance of the ordnance department not having at its disposal guns of the proper calibre and model. The field battery now in use is composed of pieces of various models, and their carriages are heavy and difficult to manœuvre by manual force. A field battery of light six or four-pounders, mounted on light carriages, would facilitate the evolutions and manœuvres and relieve the cadets from a heavy labor to which they have been heretofore subjected.

The twelve-pounders on hand are defective and have been condemned, but possessing no others they have been continued in use by using small charges. A battery of four twelve-pounders and two twenty-four-pounder howitzers would render the department complete in this respect. All projectiles supplied for practice should be of the best quality, without which there can be no satisfactory results in target firing, and, in consequence, no confidence on the part of the cadets in this branch of their course of study.

On drills and in firing in the field the cadets exhibited a thorough knowledge of the manœuvres and evolutions in this important arm of service, and in their drawings and mathematical demonstrations at the blackboard they evinced high proficiency in the theory and practice of gunnery. Their target firing and accuracy of throwing shells are very commendable, and afford unequivocal evidence of great zeal and ability on the part of the instructor, for which he is entitled to much credit.

The committee proceeded to an examination of the course of studies of the cadets as a corps of infantry. The organization is a battalion of four companies, having an appropriate number of officers and non-commissioned officers agreeably to the regulations, and the whole is commanded by Major Fowle, of the third infantry, an officer of experience and high moral worth.

This corps exhibits on the field a perfect knowledge of infantry tactics and performs all the evolutions of the line and of the battalion with facility and accuracy. Their appearance in dress, in condition of their arms and accoutrements, as well as in soldier-like bearing, is most highly gratifying and deserves much commendation.

The instruction imparted to the corps is given in the field and the recitation room in infantry tactics. In witnessing their recitation in the hall of examination, the committee were of opinion that they fully understood the course, though in some instances deficient in explanation on subjects with which they exhibited an acquaintance in the field.

The committee would remark, in conclusion, that they are satisfied, indeed gratified, with the result of their inquiries into all the subjects referred to them for investigation.

H. ATKINSON, *Brigadier General U. S. Army,*
Chairman of the Committee.

PETER V. DANIEL, Esq., *President of the Board of Visitors.*

Course of studies.

The frequent detail of the course of study in this institution renders it unnecessary that your committee should enter fully into the description of it. But at the same time not to let pass unnoticed the proper encomium upon the able manner in which the professors acquit themselves to their own honor and the profit of the pupils. The most attentive examination into the various means of education have induced them to lay a particular stress upon the assistance offered by a good library and chemical and philosophical apparatus. The former is but illy kept up by the present appropriation. It is true that all the standard works are here, but those on literature are not to be found; and as the earliest and at the same time the most learned dissertations upon the improvements of the day are found in periodical works we suggest them to be added.

The professor on chemistry, which is more an Executive than a lawful appointment, stands in a situation truly unpleasant: instead of being an independent professorship, it is in every respect subsidiary. And in this department we propose the equalization of this professor with the others of this institution, and two assistants, one of whom should be the professor of mineralogy, with privileges in rank and pay.

When we look over the splendor and perfection of the philosophical apparatus, we cannot but be struck with the inappropriateness of the room. The crowded state of the instruments, and the injury that they would sustain by moving them for the purposes of instruction, must induce this committee to ask of the proper authorities a room better suited to this important collection, and prevent the deterioration they necessarily undergo. Improvements in the science of natural philosophy—nearly every branch of which is illustrated by instruments—require also aid by an annual appropriation larger than that now allowed.

In this hasty survey of that which to them seemed their proper department, they did not offer any general reflections upon the institution as fitted to the purposes for which it was originally designed; nor would they do so now but for the allusion held up that this purpose has been perverted. Such is not the fact. If the sons of the wealthy enjoy these advantages, it is found to result from that influence that wealth exercises on every condition of things; and if to the influential, it must spring from that same influence which those who bestow desire from those upon whom these gifts are bestowed. Another reason why this institution should be equally divided in its benefits to two classes of rich and poor is, that the earlier education of the former fit them better to make returns to the country in fuller and more perfect information. This, we are aware, is not an unexceptionable rule, the first reward here being often bestowed upon some one who has labored under the misfortune of being poor. Another, and by no means the least important, reason for the appropriations, and the continued existence of this school, is the state of our physical condition as a country. Extensive in its geographical boundaries, unlimited in its wealth, and associated in feelings of political fraternity, we ought to be brought into constant intercourse. What, we would ask, is more certain in producing this effect than the aid of various departments of engineering? From our examination of this class, we see railroads, the application of steam, and all mechanical principles developed, and not one cadet who could not apply them to this all important end.

In conclusion, then, your committee beg the continuance of this institution; and all the necessary means of keeping it alive may be found included in your report to the Secretary of War.

Respectfully reported.

JNO. A. GRAHAM, *Chairman.*

Internal police.

WEST POINT.

The committee on internal police beg leave to report: That they have had under consideration the various subjects within the purview of their duties, and while they have much to approve and admire, they have, nevertheless, in their investigations, discovered defects which they will now bring to the view of the board.

As the health of the cadets is of primary importance, your committee directed their attention first to an examination of the hospital.

The condition of the hospital, in its internal arrangements, is fully suited to the object of securing to the cadets all the comforts and all the medical aid that they can require in ordinary cases of indispotion. Clean, well-ventilated, and properly attended by nurses, nothing need be added on these heads. Recent circumstances, however, of a painful character, have suggested the propriety of enlarging the number of surgical instruments, as casualties appear to be the most common outlet of life here.

The want of an appropriate instrument at a proper moment sometimes proves fatal, when its application would, perhaps, give relief.

The attention of your committee was next drawn to the barracks. The south barrack is the oldest building of the kind at this post. The rooms are badly constructed, both as regards their dimensions and their location. They are too small for the purposes for which they are appropriated, and very injudiciously disposed. The north barrack contains large and well-ventilated rooms, in every way calculated to insure the comfort of the incumbents.

Both barracks present an air of cleanliness and order that reflects credit on all concerned.

Your committee next visited the steward's hall, where the cadets mess in common. Here we found that the cadets are supplied with good and wholesome food. The price of board in this hall, exclusive of bedding, washing, or any other accommodation other than dieting, is ten dollars per month.

A new building, 50 feet in front, 70 feet deep, and 24 feet high, has been commenced, and is intended for a chapel. The erection of such a building is much wanted, and will be completed, it is thought, this year. The storehouse here is an old and very insecure building, only nine and a half feet long and eleven feet deep, and is altogether unfit for the use to which it is applied.

In conclusion, your committee would beg leave to recommend to the board that the especial attention of the Secretary of War be called—

First. To the necessity of an additional supply of surgical instruments.

Secondly. To the necessity of rebuilding the south barrack.

Thirdly. To the necessity of erecting a storehouse for the safe keeping of the stores deposited here.

All which is respectfully submitted by your committee.

E. S. DAVIS, *Chairman.*

PETER V. DANIEL, Esq., *President of the Board of Visitors.*

Fiscal concerns.

The committee on fiscal concerns report that, in pursuance of the duty assigned to them, they have cursorily inspected the accounts of this institution between the 1st of January, 1834, and the 31st of December, 1835, inclusive, and believe them to be correct; that the disbursements are in accordance with the appropriations made; and that a system of order and economy prevails throughout. The ordinary appropriations for the Military Academy are embraced under the general appropriation of pay and subsistence for the army, which does not discriminate between the pay and subsistence of it and that of the cadets. By the regulations of this institution the paymaster here stationed is treasurer of the cadets, and the sum appropriated as above mentioned is by him disbursed. The amount of this fund annually expended, by an average of the last ten years, may be fairly estimated at \$93,566 52. Another appropriation is made specially for the Military Academy, and directs the objects to which it shall be applied. These are fuel, forage, stationery, printing, transportation, postage, and for repairs of buildings, improvements, &c. Likewise for the pay of the adjutant's and quartermaster's clerks, increase and expense of the library, for philosophical apparatus and models for the department of engineering, for models for the department of drawing, repairs of mathematical instruments, for apparatus and contingencies for the department of chemistry, miscellaneous items and incidental expenses of the academy, and for defraying the expense of the board of visitors at West Point. The annual sum thus appropriated is about \$25,000.

There have been occasional extraordinary appropriations, viz: one of \$20,000 for the erection of a building for military and other exercises. This necessary edifice has not yet been erected, from the circumstance that the sum appropriated for the purpose was insufficient. It has, however, been commenced and about \$1,000 expended, under the belief that Congress will not refuse to complete a work so requisite for the successful prosecution of military knowledge during the inclement season of the year and to the health of the cadets. There has likewise been an appropriation of \$10,000 for a chapel, which is now in a state of progress, and about \$1,840 expended up to the 1st of April. The sum originally appropriated, owing to the rise in the price of materials and labor, it is feared will not complete the building; but the necessity of moral and religious instruction is so evident as to occasion no apprehension that the necessary means to finish it will be withheld.

The committee are compelled to recommend that an improvement should be made in the apartment appropriated to the use of chemistry, the library, and natural philosophy; they being too small for an advantageous display of philosophical apparatus, or of chemical experiments. Besides, the valuable library and costly philosophical apparatus is continually endangered by fire, unavoidably contingent on chemical experiments. The committee regret that the teacher of drawings is so entirely destitute of the convenience necessary to the practice, study, and, of course, improvement, in his profession. The only place in which he can prosecute his labors is either the field or the garret. Other professors have facilities during vacations, or other relaxations from their academic duties, to prosecute those studies which lead to eminence in their professions. The committee are of opinion that it would be vain to expect stability in a department so inseparably connected with the objects of this institution, (a complete military education,) or that distinguished masters would continue here as professors if reasonable accommodation is not afforded them. They therefore recommend the building of an apartment for the use of the teacher of drawing, the expense whereof it is estimated will not exceed \$800. Your committee have examined the accounts of the treasurer and of the quartermaster; they are arranged in a tabular form, under appropriate heads, for each of which there is a voucher, and without which the accounts would not be passed. The expenditures rigidly adhere to the appropriation, and the whole fiscal arrangement meets our entire approbation.

Your committee have directed their attention to the inquiry if due attention is here paid to economy in all the details of the institution, and the result is very satisfactory.

The regulations refuse to the cadet the possession or use of money, or the expenditure of it, but with the consent of the superintendent. The pay and subsistence of the cadet is \$16 per month, and two rations, equal to \$12; making the total \$28 per month. Each cadet provides a check-book, which is arranged in tabular form, and exhibits in one view his expenditures and his means. When the cadet desires to obtain an article he applies to the superintendent, whose approval is indicated by writing in the opposite column. The article is then furnished and charged to the cadet by an entry in another column. The entries in this check-book are constantly exhibited to the superintendent, and are vouchers upon which the treasurer pays to the persons who furnish the cadets.

This mode of keeping the account is perfectly simple, easily understood, and well imagined to prevent imposition. Besides, the moral effect is excellent, as the cadet is constantly admonished of the extent of his income and the necessity of a prudent exercise of his slender means. It gives to him the habit of order in his affairs; a qualification essential not only to his professional success, but to his reputation and happiness as a private man; and your committee cannot refrain from here expressing their entire approbation of the system. It is the best evidence your committee can afford you of economy on the part of those charged with the administration of the institution that there is an unexpended balance in the treasury of the last year's appropriation of about \$8,000; \$5,000 of which is intended for the supply of fuel, in part, for the ensuing year, for which heretofore no appropriation has been made in season for the necessities of the institution, leaving a balance of \$3,000.

From the statement made it will be perceived that the annual amount expended is estimated to average \$118,166 52, that is to say, for the pay of professors and pay and subsistence of cadets, \$93,566 52; and for academic purposes \$25,000. The latter item embraces the sum necessary for the increase of the library, philosophical apparatus, mathematical instruments, &c.

By reference to the regulations it will be perceived that each cadet, upon entering the institution, is required to furnish certain articles of clothing and furniture necessary to his comfort.

The cost of the above-mentioned requisites is about \$75. It is with regret your committee inform you that many cadets do not bring with them when they come to the institution money for this use. The consequence is the cadet is compelled to contract debts in anticipation of pay, which occasions him much embarrassment, and is unfriendly to that high feeling of independence which is the characteristic of a freeman and a soldier.

Your committee recommend that the War Department be requested to impress the parent or guardian of each cadet, when notified of their appointment, of the necessity of furnishing the means required by the above alluded to regulation.

Your committee are satisfied that no beneficial reduction of expenses can at this time be effected in this institution. Indeed, when the great moral and political benefits emanating from it are considered, they are only surprised that so much advantage can be gained at such a cost. By this institution the remote ends of our country are, if not indissolubly bound, more firmly welded together. The youth of the north, the south, the east, and the west, are here brought together and united in friendship's holy bands.

The parents partake of their sons' feelings, and love those they have never seen, because their sons loved them. The youth here taught enter the world with the highest aspirations, and, being fitted for any useful purpose, will attain the highest distinctions, and their hearts will recur frequently to the lovely scenes of their youth, and with gratitude to the country whose liberality educated them.

Your committee cannot but express their conviction that the beneficial results of this institution are inestimable, and that true economy demands its support.

JOHN HUNTER, *Chairman of the Fiscal Committee.*

No. 8.

REPORT FROM THE TOPOGRAPHICAL BUREAU.

TOPOGRAPHICAL BUREAU, *Washington, November 2, 1835.*

SIR: In obedience to your instructions of the 4th of September last, I have the honor to submit to you a statement (marked A) exhibiting the amount drawn from the Treasury Department, and remitted to the disbursing officers under this bureau, from the 1st of October, 1834, to the 31st of September, 1835, inclusive, and the amount of accounts rendered.

The topographical and civil engineers have been employed upon, and the funds appropriated for surveys for the year 1835 have been applied to the following objects:

1. An examination of the route for a railroad from Memphis, in Tennessee, to the Atlantic ocean.
2. A report and estimate of the cost of the construction of the Portage summit of the Ohio canal; that is, the canal from Pittsburg to Lake Erie.
3. Survey, with a view to the improvement of the Cumberland river, from Nashville, Tennessee, to the head of navigation in Kentucky.
4. The report of the geological investigations made of the public lands and of the Territory of Arkansas.
5. A survey of the harbor of St. Joseph's, in the Territory of Michigan.
6. A survey of the harbor at the mouth of Trail creek.

These surveys and reports, from 1 to 6, inclusive, have been completed since the last annual report, and were reported to Congress during its last session.

7. A survey of the Delaware river from Newcastle to Port Penn, and a survey of Pea Patch island.

These surveys embrace an exposition of all the facts necessary in the digesting of a system of the defences of that pass in the river, as well as all those necessary to its navigation. The duty is completed, and the maps delivered to the bureau.

8. A survey of the Brandywine shoal. The object of this survey is to determine the best position on the shoal for the construction of a light-house. It is a highly important point in the navigation of the Delaware bay, but its exposed situation, and the composition of the shoal, make it one also of extreme difficulty in the establishing of a foundation which will endure and sustain the superstructure for the light.

The appropriation for this object was made in June, 1834, and in the following words:

"For rebuilding the light-house on Brandywine shoals, in the bay of Delaware, thirty thousand dollars: *Provided, however,* That before the commencement of the work, a resurvey, plan, and estimate shall be made, and that then it shall be in the discretion of the proper department to enter upon the rebuilding of the said light-house, or to report such survey, plan, and estimate to Congress as shall be considered best for the public interests."

The survey was commenced as soon as the necessary arrangements could be made, and it was ascertained in a short time that the appropriation was entirely inadequate to the object, which, as a measure preliminary to the building of the light-house, required that an artificial foundation should be established upon a sandy shoal in the mouth of a wide bay, and exposed to the violence of the waves of the Atlantic.

Under these circumstances, the alternative presented by the law was adopted, and the survey, plan, and estimate were presented to Congress during its last session.

As it was not acted upon, additional investigations have been since made, and their result is the foundation of an item in the estimate from this office for the "rebuilding of the light-house on the Brandywine shoal."

The report, estimate, and plan, in all their details, are daily expected from the engineer who had this survey in charge, which, as soon as received, will be laid before you.

The amount appropriated in the act of June 30, 1834, was \$30,000, of which \$1,150 have been drawn out of the treasury for the necessary preliminary surveys. The total amount of the estimate of the engineer is \$123,985 93, leaving for the object a deficiency of \$95,535 93, which amount constitutes an item in the estimates of this bureau.

9. In the drawings and reports of various parts of canal routes across the States of Maine, New Hampshire, and Vermont, in order to complete a series of surveys for the same objects, which had been partially attended to some years since. All the field-work of these surveys is completed; the drawings and reports only have to be made; these, it is expected, will be delivered to the bureau during the ensuing winter.

The delay which this work has experienced has been an unavoidable result, from the small number of the corps, which forced the bureau to extend the attention of the officer superintending this to other duty.

10. The drawings and reports of the military defences of parts of the coasts of North and South Carolina. The system of army details, which removes our assistants before the completion of the particular

duty upon which they have been engaged, together with a diversion of the attention of the superintending officer to other surveys, have occasioned the delays which these works have experienced. There is, however, every reason to believe that they will be completed during the ensuing winter.

11. A survey of a canal route from Cape Fear river, through the Waccamaw lake to the Waccamaw river, North Carolina. The returns of this are daily expected.

12. An examination of the construction of the canal around the Muscle Shoals of the Tennessee river.

13. An examination of the route for a railroad from Portland, in the State of Maine, to Quebec, in Canada.

14. The survey of a route for a railroad from the Connecticut river to intersect the Concord railroad in New Hampshire.

15. The survey of a route for a railroad from Boston, in Massachusetts, to Whitehall, in New York.

16. A survey of the harbor of East Thomaston, in Maine.

No. 16 is completed, and the results are expected at the bureau early during the ensuing winter. Numbers 13, 14, and 15, are not in as great a state of forwardness. The extensive views embraced by these three, and the lateness of the season when the attention of the officer who has them in charge was called to Nos. 14 and 15, render it highly probable that no definite report will be made by him until during the course of the next year.

17. A survey of the Christiana river from Wilmington to the Delaware, with a view to improve the entrance of the Christiana. This is completed.

18. A survey of Provincetown harbor and its vicinity. The survey of this position, so important in the military defences of the coast east of Cape Cod, and as a point of shelter for our commerce from a pursuing enemy, or from storms, is now completed. All the field-work is done, and the drawings and reports will also be during the present year.

19. The survey of a route for a ship canal around the falls of Niagara, effecting a junction with the two lakes, Erie and Ontario. The field-work of this duty is completed; the drawings and reports are in progress, and will be delivered to the bureau during the ensuing winter.

20. A survey of the channel between the North and South Hero islands, on Lake Champlain. This duty is also so far completed that the drawings and reports will be delivered to the bureau during the present year.

21. A survey of a route for a road from the Alabama line, by Marianna, to the town of Appalachicola, in Florida. This duty was completed; but before entering upon the opening of the road, as required by the law, it was thought advisable to examine a different route, which would apparently much shorten the distance. This examination is now making.

22. A resurvey of the route of the national road between Springfield, Ohio, and Richmond, Indiana; also from Springfield, by the way of Dayton and Eaton, to Richmond. This duty has been completed, and the drawings and report delivered to the bureau. These last have, also, in conformity with the law, been submitted to the President, who has affixed his approbation to the location of the direct route.

23. A survey of the Maumee river from its mouth to Maumee city, completed, and the drawings received.

24. A survey of the route for a railroad from Detroit to Pontiac.

25. Also the route of a railroad from Detroit to the St. Joseph's river.

These surveys have been completed, and the returns duly made.

26. A survey of the route of a road from Chicago to Fort Howard, on Green Bay.

27. A survey of the mouth of Galleau river.

28. A survey of the mouth of Black river.

29. A survey of the mouth of Milwaukee river.

These four (Nos. 26, 27, 28, and 29,) are now in progress, and it is expected will be completed this fall and the ensuing winter.

30. A survey of a railroad from Memphis, Tennessee, to such point on the lines of the States of Virginia and Tennessee as may be best adapted, in the opinion of the engineer, to facilitate the continuation of the road to the Chesapeake. The survey is now in progress.

31. A survey of a route for a road from the Maumee river, through the northern counties of Indiana, to or near the rapids of the Illinois river, and thence to the Mississippi river, at some point between Rock island and Quincy. The field-work of this survey is completed, and the drawings and reports are expected to be delivered to the bureau during the course of the present year.

32. The survey of the following routes for roads in Indiana: Lawrenceburg and Indianapolis railroad; Madison and Lafayette railroad; Evansville and Terre Haute railroad; Columbus and Jeffersonville railroad; New Albany and Vincennes turnpike road; New Albany and Crawfordsville turnpike road.

33. In superintending the construction of the aqueduct over the Potomac at Georgetown. This may truly be considered one of the most interesting and one of the most difficult of civil constructions ever attempted in our country. The object of the work is to conduct the Chesapeake and Ohio canal over the river Potomac, at the upper end of Georgetown, and thereby furnish to its trade a termination in the fine harbor of deep water at Alexandria.

The length of the aqueduct is 1,700 feet, (including the causeways,) sustained by two abutments and six piers, at a height of 29 feet above the common high tides of the river. These abutments and piers are all to rest upon the natural rock foundation, which is found throughout the length of the aqueduct, at a depth nearly uniform of 30 feet below common high water, making the total height of each pier 59 feet.

The successful establishment of a foundation at such a depth, in water and mud, is among the most difficult problems in the practice of the engineer, and the experience of the world has furnished so few instances of similar attempts, that he is comparatively without those guides which are in other instances so easily obtained.

But the persevering efforts of science and mechanical skill supplied the deficiency of information from precedents, and, overcoming all obstacles, triumphed in the successful establishment and completion of one pier during the course of the last season, and in a successful issue to the greatest difficulties in the establishment of a second, and of one of the abutments.

This work is the result of the enterprise of an incorporated company, but as the United States furnished a proportion of the funds for its aid, the company considered it advisable, and applied, to have its expenditure placed under the direction of an officer of the corps of topographical engineers, that any desired investigation, in reference to the faithful and judicious application of the means allowed by the

United States, could be made independently of their control, and that they might also, in so difficult and rather unprecedented an undertaking, avail themselves of the presumed science of officers.

It affords me much satisfaction to add, that a frequent inspection, as well of the work as of the expenditures, has resulted in a conviction of the great skill and judgment of the engineer, and of the faithful application of the funds. The books exhibit the most minute detail of expenditure for every object, and his mechanical arrangements have been justly admired by all who have visited the work. The engineer is prepared, whenever it shall be called for, to present the most satisfactory statements, descriptions, reports, and drawings, in reference to the whole.

34. In the survey of a railroad from Pensacola, in Florida, to Columbus, in Georgia. Although Pensacola is one of the finest harbors on the Gulf of Mexico, and, in fact, of the United States, and although it is also at present an established navy yard and navy depot, yet, as the land in the vicinity is extremely poor, and there is no river leading from its harbor to the interior, its commercial advantages are but partially felt, and the population necessary to its defence exposed to hazardous and difficult, or tedious and dilatory methods of access. The remedy for these evils is in improving all means of communicating with the richer soil and denser population of the interior, and the road now being surveyed will eminently accomplish these object. It will open to the products of the interior a cheap and rapid means of access to an uncommonly fine harbor, and will enable that harbor to command for its defence the strength of the interior in the shortest possible time. It possesses, therefore, a highly national aspect, deserving of the patronage which has been extended towards it by the general government, in permitting its officers to superintend the work.

35. In a continuation of the mineralogical and geological investigations of the public lands, the Territories, and the Indian country. The highly interesting results from the geological investigations of the last year, under the same officer who has now those of this year in charge, are the best earnest of the manner in which these will be performed.

His instructions were, that, "it being desirable to have some knowledge of the mineral structure of the Coteau de Prairie, an elevated ridge which separates the Missouri from the St. Peter's, a tributary of the Mississippi, you are directed to proceed to that vicinity, and to make such investigations as the season and the nature of your opportunities will admit. It is desirable, also, that you should take Green Bay in your way, with a view to the examination of the mineral structure in the vicinity of the Wisconsin river."

Early history had mentioned the "Coteau de Prairie" as a locality rich in its deposit of copper in its various forms. Records which are presumed to be deserving of confidence state that many tons of this mineral had been taken at an early period of our history to France, and there smelted to advantage. There is no doubt that it exists in that region, but in what quantities, and at what particular places, have yet to be ascertained.

From the known intelligence, great zeal, and untiring perseverance of Mr. Featherstonhaugh, no doubt is entertained that all that can be will be done in accomplishing the discovery; but he has to contend with the difficulties of an unknown and wilderness country, and in a climate affected early in the season with the inclement weather of winter. Should his report, therefore, not be as much in detail as is desirable, (of which there is some reason to fear,) there is no doubt that every accessible general indication will be ascertained, sufficient to form the most encouraging basis, and the best justification for future and more detailed investigations.

The great interest which is felt by the country in reference to this particular duty, exhibited by an unparalleled demand for the report of the proceedings of last year, is no unequivocal proof of the value which is placed upon it, and the advantages which are anticipated to result from it. Such investigations are beyond the resources of individuals; and the States limit those which they authorize to the extent of their territories. If the United States does not therefore complete the chain of knowledge by a continuation of its efforts in reference to the public lands and the Territories, an extensive region, rich with the most valuable ores, will continue to remain unknown. Under these impressions, I have hazarded a small item in the estimate from this office, to enable it the more satisfactorily to complete a duty which has been so fortunately begun.

It may probably be observed that in the foregoing statement of surveys there are many enumerated which were not ordered by a resolution of either house of Congress or by any law.

The rules which have been prescribed for this office in these matters are as follows:

1st. That surveys ordered by law, and for which there are generally specific appropriations, should be attended to.

2d. Surveys ordered by resolutions of Congress. The expenses of these are paid out of the annual appropriation for surveys, including the pay of the civil engineers, which is taken out of the same appropriation.

3d. Surveys of a national or highly interesting commercial character applied for by States or incorporated companies. In these cases, such officers as can be spared (with their instruments) are allowed to be assigned. All other expenses, including those for additional engineers or additional instruments, are supplied by the parties interested in the survey, the United States being subjected to no charge on these accounts; or, in other words, confining the aid from the United States to the mere loan of such engineers and of such instruments as can be conveniently spared.

In the execution of the foregoing duties, the whole force of this bureau, in military as well as civil engineers, has been employed. Its military engineers consist of the corps of topographical engineers and such lieutenants of the army as are detailed for its duties; its civil engineers of those authorized to be employed under the authority of the law of April 30, 1824.

The first embraces, of the corps of topographical engineers.....	10 officers
Of lieutenants now detailed for this duty from the army.....	26 "
The second, being citizens without military rank, employed under the act of April 30, 1824..	13 "

Making the whole force of engineers employed under this bureau equal to..... 49

The evils of these military details arise from—

1st. The shortness of the time in which an officer, being placed on the duty, has to acquire that practical knowledge in the use of instruments, and the habit of applying his scientific knowledge to results in practice, without which he can be of no value.

2d. The apathy which oppresses a temporary detail, from the consciousness that if he labors, it is to acquire that which, as soon as it is obtained, he will, in all probability, be removed from the only sphere of action in which it can be applied.

3d. When the temporary detail is endeavoring partially to acquire a knowledge of the duties of the corps to which he is attached, he must, from the very nature of things, lose by its disuse much of the knowledge of his proper arm of service, and when he returns to it be consequently a less valuable officer than when he left.

4th. The corps is, under this system, continually exposed, in the execution of its duties, to those consequences which must flow from the services of unqualified and consequently incompetent assistants, and is forced from this cause to increase its demands upon the army, that it may compensate partially by numbers for deficiencies in experience. These demands, if complied with, but increase the general evil before alluded to; they cannot be complied with but partially, as the line has duties for which these subordinates were intended, and which it would not do to neglect. We are placed thereby in a continual series of unpleasant bickerings with the line. The corps endeavors to retain its experienced assistants as long as possible, because they are essential to the well-doing of its duties. The line regrets these details, however temporary; it seeks to reduce them to short periodical tours, and is continually endeavoring to get back the older assistants. It is a system, therefore, in which the permanent interests of the line and of the corps are diametrically opposed, and which, as might well be supposed, by the occasional success of either, has left one or the other exposed to the reproach of negligence or favoritism.

There is no one more strongly impressed than myself with the efforts which the line now makes in order to aid us in our duties, and that it cannot do more without a sacrifice of its own; but, at the same time, I must acknowledge that after many years of experience I am satisfied that the duties of the topographical engineers can only be carried to that extent of perfection and intelligence which the country has a right to expect by a system which shall permanently attach its assistants to the corps.

The effect of these details from the army for the duties of this corps may be expressed in a few words. If temporary or periodical, it is a sacrifice of the duties of the corps; if permanent, while they yet retain their rank and its privileges in the line, it is, to the extent of the number detailed, a sacrifice of the interests and duties of the line.

The civil engineers employed under the act of April 30, 1824, are officers without military commissions or military rank. The law recognizes no distinction of grade or of title between them, although the custom of service has divided them into the two classes of civil engineers and assistant civil engineers. The rules and articles of war and the army regulations cannot be extended over them. There is, therefore, an absence of legal authority in relation to their control, and also of defined right in relation to their privileges, from which it will be seen that no subordination or authority can well be established in such a service. No serious evils have yet resulted from it, owing, however, more to the correct moral bearing of the gentlemen who hold these appointments than to any well-defined power over them. Among the greatest inconveniences of this arrangement is the difficulty of associating the two kinds of engineers on the same duty. The military engineer is unwilling to be placed under the civil, and probably cannot be by law, or in a way that would involve any legal responsibility. The civil engineer is equally unwilling to be viewed as subject only to be commanded, without the hope of ever enjoying the right of commanding in turn. It is a moral prostration of his branch of service to another, without the prospect of ever being relieved from it, and adapted to engender painful and unpleasant feelings, as well as being in itself unjust.

Another evil is, that this mixed arrangement of military and civil appointments is destructive of a proper *esprit du corps*, and of that united emulation which exerts the whole mass of mind to elevate the duties of that branch to which it belongs.

With a service so constituted, and beset with inconveniences so detrimental to its duties, this bureau has been struggling for years, sparing no efforts, however, to do the best which could be done with the means placed at its disposal.

The means have already been represented generally. I shall now speak of them numerically and economically, with a view of submitting a plan which will, if adopted, remedy all the evils, and without additional cost.

The military engineers consist, 1st, of the corps of topographical engineers, ten in number. Of these, one receives the pay of a lieutenant colonel, five have the pay of majors, and four the pay of captains. The annual compensation of the whole is \$14,496.

2d. Of the temporary details from the army. These vary from 25 to 30. There are now 26 on this service. The annual compensation of these is \$23,344.

The civil engineers consist of those employed under the act of the 30th of April, 1824. Taking the average of the last three years, their number is 13, and their annual compensation is \$16,700.

The entire annual cost of the whole number of officers on topographical duty is therefore \$43,540.

In the above statement it will be perceived that the officers detailed from the army are included in the sum of the total cost. All these details receive their pay out of the general appropriation for the army, and it does not therefore appear in any estimate for the corps of topographical engineers or for surveys; yet, as this number is always employed on topographical duty, their pay is justly chargeable to that branch of service, and is therefore included in the sum of its annual cost.

The compensation for the civil engineers is taken from the customary annual appropriation for surveys.

From the foregoing it will therefore be perceived that the present force and rank of officers for topographical duty consists, in its present mixed and complicated organization, of one lieutenant colonel commanding, five majors, four captains, twenty-six lieutenants of artillery and infantry, and thirteen civil engineers.

Now, the remedy proposed is to incorporate the whole or a part in one regular corps, with the usual grades of military rank, and to subject the whole to the rules and articles of war.

The subject has been treated with much ability by the chairman of the Military Committee in a report to Congress during the last session. Allow me, respectfully, to refer you to that report for some views which are not incorporated in this.

But taking the opinion of the distinguished chairman of that committee as the best basis for an improved organization, it results in the recommendation of a corps to consist of one colonel, one lieutenant colonel, four majors, ten captains, ten first lieutenants, and ten second lieutenants; in all, thirty-six engineers, of which the total annual cost will be \$40,454. Our present imperfect organization gives forty-nine engineers, of which the total annual cost is \$43,540, making an annual difference in favor of the organization of \$3,086.

The plan submitted presents two questions which require explanation: one referring to the numbers, the other to the cost.

The lesser numbers of the proposed plan are considered capable of doing more duty than the greater numbers of the existing plan, because, 1st, of their better organization; 2d, and of always controlling the experience acquired, which, accumulating to the same individuals, gives that facility and aptness of execution and readiness in the application of theoretical knowledge which will enable the lesser numbers in the one case to do more and better work than the greater numbers in the other. It is, in fact, but an application of the simple axiom, that he who is acquainted with the theory and practice of any profession can do more of it and better than any number of those who have not this knowledge.

3d. The number is also based upon the consideration that these are now, and would for many years be, fully adequate to the wants of the general government for topographical duties.

In reference to the cost two considerations have been made: one to be found in the report of the Military Committee of the last session, which reduced the army, proportionally, to the number transferred from it to the corps. This, of course, would result in a positive reduction of the army estimates, or a transfer of a portion to the estimates of the corps, and would make a positive saving of the amount previously stated; but the army would probably suffer inconvenience from the reduction. It is divided into so many small posts, and extended over so vast a space of country, that it could not feel less the inconveniences of the reduction than it does those of the details. These are already oppressive to its duties. Although the reduction of the army estimate would be thereby a proportional reduction of army expenditure, the reduction would be at the expense of the organization of the army and of its duties, and might, therefore, although a saving, not be considered a true economy.

The other, to leave the army as it is, and organize the corps as it should be. Under this consideration the total amount of present appropriations absorbed by the proposed organization would be, for the corps of topographical and civil engineers, \$31,200; but as the total cost of the proposed corps is stated to be \$40,454, it would leave an annual deficiency over our present appropriations of \$8,254.

Under either view the authority to employ civil engineers under the act of the 30th of April, 1824, is to be repealed; of course the amount of their annual compensation ceases with the passing of the law for the new organization.

But as a plan which leaves the army in its present form is, under all circumstances, the better, that for the organization of the corps, which will be presently submitted to you, will be made in accordance to it.

The plan submitted last year, while it authorized a complete organization, embraced a feature of periodical promotions until the organization should be complete. Such a course is not unfrequent in the extension of scientific corps when the materials for supplying places have to be formed; but when, as in our circumstances, we have abundant officers properly educated, experienced in its duties, and who, in fact, are now performing them, such a course cannot be advisable but on the supposition that a full organization is not now wanted. As we already are obliged to employ more than the organization contemplated, this supposition cannot be well sustained; and believing, as I do, that the whole number are wanted, I have considered it the better course at once to submit a correct plan to your consideration.

It has been previously observed that the present corps consists of one lieutenant colonel commanding, five majors, four captains, to which are attached twenty-six lieutenants of artillery and infantry, and thirteen civil engineers.

The plan proposed adds a colonel to the corps, takes away one major, and from the lieutenants and the civil engineers takes six captains, ten first, and ten second lieutenants.

I have hitherto confined myself to an exposition of the kind of organization which now exists for topographical duties—its defects and inconveniences. Although many of the advantages of the modifications proposed are to be inferred from these, yet it may be well to state a few of the important public services which this corps has to perform, but to which, from its present defective organization, its attention has been applied but imperfectly.

Hitherto its duties have been principally directed to surveys for the defences of the posts and harbors on the Atlantic, including the water approaches to the positions to be fortified.

These surveys generally embrace some extent of coast as well as of inlets, and, from the facts which have to be collected, constitute also very valuable, but rather limited, charts for navigation; but the land approaches to these positions remain yet to be surveyed.

Surveys of our harbors and of our rivers on the coast, with views to their improvement, and also to obtain more accurate charts of them than now exist. Although much has been done under this head, yet the greater part of our coast, and particularly from the Delaware south, has yet to be attended to. These surveys form valuable details to be introduced in the great survey of the coast now being made, and which, with a proper understanding with the principal of that survey, may be introduced into his charts with great facility.

Surveys of the harbors and shores of our western lakes. It is only some of the principal harbors of these lakes to which the attention of the corps has yet been directed—those affecting the present lake navigation and requiring immediate improvement. The connecting links between these harbors, the inlets of a secondary class, and the rivers which empty into them, have hitherto received but little attention. Our imperfect organization and limited numbers were embarrassments to the activity and extent of our operations which could not be overcome.

Surveys for common roads, railroads, and canals. Although these may be considered as purely of a civil character, yet a finer school of practice than they furnish for the topographical engineer cannot well be imagined. He obtains on these duties expertness in the use of instruments; the habit of investigating the resources of a country, commercially, morally, and physically; its supplies in provisions, timber, metals, and means of construction; its population, and the best means by which it can be commanded in cases of emergency; its military aspect, hilly, level, or mountainous, and the various roads which intersect the path of his survey. While he is, therefore, apparently engaged on an object ostensibly of mere profit to its undertakers, he is perfecting himself in the practice of his profession, acquiring exact and persevering habits of investigation, improving his *coup d'œil*, and gathering the most valuable information in relation to the capabilities of self-defence of the locality of the survey, and its ability to aid in the defence of other parts of the country.

Surveys of the inland frontiers of our Atlantic and western States. Singular as may be the acknowledgment, yet it is nevertheless the fact that this highly important service has hitherto received but little attention. It embraces not merely a geographical knowledge of the frontiers named, but accurate topographical surveys of the vicinities of all our western posts; of the best routes for roads of communica-

tion between the posts and with the interior for supplies and assistance. We have hitherto been able to direct but very feeble efforts to these important objects. The fault is not that of this bureau, but of the inadequate means placed at its disposal. Although there is an annual appropriation of twenty-five and sometimes thirty thousand dollars for surveys, yet as considerably more than half of this is required for the salaries of the civil engineers, it leaves but a small portion for the expenses of surveys. This small portion is generally absorbed in the execution of those surveys directed to be made by resolutions of Congress, and of some parts of our sea-coast; the latter being a continuation of the surveys directed some years since in reference to a regularly digested system of sea-coast defence. We are therefore left without the means of bestowing our efforts on the western frontier; and the position of appearing to neglect so important a duty in which this bureau has been placed is shown by the foregoing remarks to have been beyond its power to obviate.

Should the organization proposed be adopted, it will leave the whole appropriation for surveys free from the deductions for the salaries now paid out of it, and the bureau may then place a brigade of officers on the western frontier, to commence the execution of those important duties. Should it not be adopted, it will be seen that the bureau will be as unable as heretofore to attend to them, unless a separate appropriation is granted, and which is asked, in order to meet the contingencies of the case, in the estimate now submitted.

The survey of the coast. It would be superfluous to speak of the necessity of this survey, of its immense importance to our commerce and navy, and its extensive influence over any system of defence for the Atlantic frontier.

Of the methods by which alone such a duty ever has been executed by any nation, or ever can be correctly, the books are full; and from the same sources we may also draw the best conclusions of the time, and means, and qualifications which such a labor requires. Applications have been made to this bureau for aid in officers, but it has been able to furnish but one. It was a cause of serious regret, but yet beyond the power of this bureau to remedy, and only in the hands of Congress by legislative action.

We have but one school in our country which may be considered as thoroughly mathematical in its course—the military school at West Point; and it is to this school only which we can look for individuals sufficiently qualified to enter upon the duties of this survey and justly aspire to a knowledge of its highest practical operations. I do not mean by this to say that there may not be citizens who, of their own taste and own force of mind, are not equally qualified; but these are only rare exceptions to a rule, the correctness of which will stand the proof of a comparison of the course of mathematical instruction and habits of study pursued at West Point with those of any other school or college in our country.

Now, then, if the desire is that this great work should not cease with the life of the present highly informed gentleman who superintends it, and that, in course of time, we should have numbers capable of conducting it, and of executing any of its parts, we must give them the opportunity of acquiring the necessary practical knowledge by placing them upon it. This can be done only by allowing to the corps within whose proper province such duties naturally fall the necessary numbers. We can then place upon this duty a brigade of officers, from whose efforts may be justly anticipated the results of adequate education, facilities in practice, and of order and subordination of conduct.

The superintendence of constructions purely civil. There is no corps in our country to which the duties of a corps of *ponts et chausee* so properly belong as to the topographical engineers. It is so intimated in the report of the Military Committee of the last year; and it seems to me an unequivocal dictate of common sense to say that the corps which is employed in making the survey, digesting the plan, and forming the estimate of a work is, from the very nature of the case, more fully imbued than any other can be with the considerations and unity of view which its construction involves, and therefore better qualified to superintend it. The subject does not seem to admit of much reasoning, but stands, like an axiom, upon the clear truth in its annunciation.

Having now exposed generally to your consideration the defects of the present organization of this bureau, its evils to the service, the remedy, and the general duties which the corps will be called upon to execute, I have, in conclusion, appended to this report the form of a short bill which appears to me best adapted to effect the desired organization.

Respectfully submitted.

JOHN J. ABERT, *Lieutenant Colonel Topographical Engineers.*

Hon. LEWIS CASS, *Secretary of War.*

A.

Statement showing the amount of money drawn from the treasury and remitted to the officers and agents disbursing under the Topographical bureau, from the 1st of October, 1834, to the 30th of September, 1835, inclusive, and the amount of accounts rendered by each within the same period.

A BILL for the better organization of the corps of topographical engineers.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the corps of topographical engineers shall be reorganized and increased by regular promotions in the same, so that the said corps shall consist of one colonel, one lieutenant colonel, four majors, ten captains, ten first lieutenants, and ten second lieutenants.

SECTION 2. And be it further enacted, That vacancies created by said organization over and above those which can be filled by the present corps shall be taken from the army, and from such as it may be deemed advisable of the civil engineers employed under the act of April 30, 1824, and that the pay and emoluments to the officers of said corps shall be the same as are allowed to officers of similar rank in the regiment of dragoons.

SECTION 3. And be it further enacted, That the authority to employ civil engineers in the act of April 30, 1824, and the authority by law for the employment of the present corps of topographical engineers be, and the same are hereby, repealed after the passage of this act, and that all letters and packages on public business to and from the chief of the corps now authorized be free from postage.

SECTION 4. And be it further enacted, That the officers of said corps shall be subject to the rules and articles of war, and to such regulations in relation to their duties as the President may think proper to adopt.

No. 9.

REPORT FROM THE ORDNANCE DEPARTMENT.

ORDNANCE OFFICE, Washington, November 20, 1835.

SIR: In obedience to your order of the 4th of September last, I have the honor to transmit a report of the general result of the proceedings and operations of this department between the 1st of October, 1834, and the 30th September, 1835.

The papers marked A and B present a general view of these concerns during the last-mentioned period, as well in regard to the amounts of expenditures under the several heads of appropriations as in reference to their objects, and to the various ordnance stations where they have been made.

The first of these (A) shows the whole amount of funds remitted from the treasury to disbursing officers and contractors in this department during the year 1834, to have been..... \$1, 039, 248 78
That the portion of that sum which was expended and accounted for during the same period amounted to..... 951, 239 89

And that at the close of that year there remained unexpended, and in the hands of disbursing officers, the sum of..... 88, 008 89

A balance which it may be proper to remark was liquidated by the responsible disbursing officers in the first quarter of 1835.

Statement B exhibits the total amount of funds remaining in the hands of disbursing officers at the close of the year 1834, and which have been remitted to them and to contractors during the first, second, and third quarters of the year 1835. This amount will be seen to have been.....	\$739, 919 68
And the portion of this sum expended, and for which accounts have been rendered during the same period, will be seen in the same statement to have amounted to.....	650, 216 31

The unexpended balance exhibited in the same statement as being in the hands of disbursing officers at the close of the third quarter of 1835 having been.....	\$89, 703 37
--	--------------

Statement C presents a view of the general result of the operations at the several arsenals and armories of the United States in the manufacture, repair, and purchase of the principal articles of ordnance, ordnance stores, and building materials. It exhibits the result of these operations to the extent to which they have been completed, during the year between October 1, 1834, and September 30, 1835, indicating, among other articles of ordnance and ordnance stores which have been fabricated or procured, the following, viz: of artillery, 98 32-pounder iron cannon; 3 12-pounder and 4 6-pounder iron cannon; 34 32-pounder casemate carriages, complete; 158 32-pounder casemate chasses; 3 24-pounder casemate, and 177 24-pounder barbette carriages, complete; 77 24-pounder casemate chasses; 33 field artillery carriages; 4 6-pounder caissons, and one travelling forge.

Of small arms manufactured and procured, viz: 22,506 muskets, complete, made at the national armories, and at the private factories, 7,540 muskets, complete; 1,060 rifles, (Hall's,) 2,000 artillery swords, and 1,840 cavalry sabres.

Of accoutrements for small arms: 750 sets for infantry, 500 sets of rifle accoutrements, 250 sets for cavalry, 2,400 sword belts, and 1,214 sabre belts.

Statement D shows the extent of the operations during the year between October 1, 1834, and September 30, 1835, which have occurred in procuring ordnance and ordnance stores under the act of 1808, for arming and equipping the militia of the States and Territories. This statement presents also a view of the expenditures under the act, which have resulted during the same period, in procuring the stores, amounting, for all objects, to \$148,518 49. It exhibits, among other articles of ordnance stores procured, 26 field carriages, with their equipments, complete; 7,540 muskets, 1,060 rifles, (Hall's,) 2,000 artillery swords, 840 cavalry sabres, 2,374 sword and sabre belts, and 330 percussion cannon locks.

Statement E exhibits the amount of ordnance and ordnance stores which have been apportioned for the year 1834 to the several States and Territories under the act of 1808 for arming and equipping the militia, this apportionment being founded on the recent returns of the strength of the militia as made by the adjutant generals of the militia of the several States to the adjutant general of the army.

Statement F shows the several articles of ordnance and ordnance stores which have been distributed to the militia of the States and Territories during the year between October 1, 1834, and September 30, 1835.

Statement G presents a view of the munitions of war issued by this department during the year, between October 1, 1834, and September 30, 1835, to the army. In this it will appear that 89 32-pounder, 162 24-pounder, 6 12-pounder, 18 6-pounder iron cannon; 34 32-pounder casemate carriages, 36 24-pounder barbette carriages, 6 12-pounder and 19 6-pounder field carriages; 105 muskets; 750 dragoon sabres; 110 (Hall's) carbines; 67 rifles, and 196 sets of infantry accoutrements, are among the principal articles issued.

Statement H exhibits the operations of the lead mines for the year ending September 30, 1835, and statement I the amount of lead made at these mines in each year from the year 1821 to September 30, 1835.

	Pounds.
By these statements it will appear that the lead made during the said year amounts to....	3, 754, 290
Total amount of lead made from 1821 to September 30, 1835.....	75, 571, 609
Total amount of rent lead accruing for the above period.....	5, 909, 216
Amount of rent lead due to the United States yet to be collected.....	493, 313

The returns of lead made during the last year exceed the returns of this year by 4,217,289 pounds. This has not been caused by a decrease in the manufacture of lead, but by the refusal of numbers of the smelters to make the required returns to the superintendent and pay in their rent lead. The grounds of their refusal are: first, that the act of March 3, 1807, contains no authority for collecting rent lead on a license for smelting lead ore; and, secondly, that any law authorizing the leasing of public land within the limits of a State is unconstitutional.

To test the validity of these objections suits have been ordered against some of the most prominent and influential of the delinquents, under a belief that the final adjudication of their cases would restore order, without resorting to further measures, or incurring additional expense.

There are, however, other views of this subject which it now becomes proper to state, viz:

The decision of a suit by the proper tribunal might settle the constitutional question in favor of a State, but the principles of that decision might not be applicable to the condition of a Territory. Should a decision be made which would bind the one and exonerate the other, the operation would be partial and unequal. In the sales of the public lands which have taken place in the mineral region it appears that conflicting interests have arisen which, probably, can only be adjusted by an entire sale of the mineral and timbered lands.

Such a course is therefore respectfully recommended as being best adapted to remove existing difficulties and promote the general prosperity of that section of the Union.

As regards the building operations progressing at the several arsenals, I have the honor to state that they have proceeded to the extent of the last annual appropriation for those objects, and have been conducted in the most efficient manner by the several superintending officers.

I beg leave to call your attention to the very inadequate compensation of the clerks of the Ordnance office, and to request that, for the performance of duties confessedly as arduous and important as those of any other bureau of the War Department, measures may be taken to put them upon a footing of equality, in respect to salary, with the clerks in the offices of the commissary general of subsistence and of the paymaster general.

I have the honor to be, sir, respectfully, your obedient servant,

GEO. BOMFORD, Colonel of Ordnance.

Hon. LEWIS CASS, Secretary of War.

A.—Statement of the money expended through the ordnance department in the year 1834.

Officer's name and station.	Appropriations.														
	National armories.	Current expenses of ordnance service.	Arsenals.	Armament of new fortifications.	Arming and equipping the militia.	For thirty-six double racks.	For additional machinery.	Erecting two dwelling houses.	For building a pay office.	For the new arsenal.	Stating tools and rebuilding water-wheel.	Erecting forging shop.	Stating tools of four workshops.	Enlargement of the canal.	Repairing the walls of four workshops.

24TH CONGRESS.]

No. 614.

[1st Session.]

ON A CLAIM OF AN OFFICER OF THE ARMY FOR ADDITIONAL PAY AND RATIONS FOR EXTRA LABOR AND RESPONSIBILITY IN CHARGE OF THE CONSTRUCTION OF THE DELAWARE BREAKWATER.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 21, 1835.

Mr. ELISHA WHITLESEY, from the Committee of Claims, to whom was referred the petition of George Bender, reported:

That this committee, concurring in the report of the committee presented on the 22d of May, 1834, make the same a part of this report, and herewith present a bill.

MAY 22, 1834.

The Committee of Claims, to whom was referred the petition of George Bender, late a major in the army of the United States, report:

The services are so fully set forth in a communication made by General Jesup to the committee, in answer to inquiries made of him touching the claim of said Bender, submitted to the committee, and analogous cases are so clearly referred to, that the committee think it is unnecessary to go into a minute examination of the facts set forth in the petition, and in a communication addressed to the committee by Major Bender. They concur with General Jesup in the belief that he is entitled to the pay of a major of engineers superintending a work, and for that purpose they herewith report a bill.

QUARTERMASTER GENERAL'S OFFICE, *Washington City, May 17, 1834.*

SIR: I have received your letter of the 14th instant, covering an account of Major Bender, late of the army, for extra compensation when employed on duty connected with the Delaware breakwater; and, in reply, I have the honor to state that the major was ordered to Philadelphia on the 4th of April, 1829, and directed to make the disbursements for that work. He relieved an agent who would, for the disbursements alone, have received two thousand dollars per annum. It was not contemplated at that time to impose any other duties upon him, as the proper disbursement of the large appropriations made by Congress for the work, and the purchase of the large quantities of supplies required, were considered as sufficient employment for any one officer under ordinary circumstances; but it soon became necessary, in consequence of difficulties between the contractors and the engineer, and other agents, to enlarge the sphere of his duties. In May, 1829, the chief superintendence of the operations at the quarries was assigned to him, and he originated and carried into effect the system for ascertaining the quantity of material delivered, and was charged with the whole administrative accountability and direction of the public property, and was required to visit the work frequently, and inspect it minutely.

In October, 1831, he was appointed inspector of the work, and so continued until relieved in December, 1832. In April, 1832, he was required, in addition to his other duties, to take upon himself those of the quartermaster at Philadelphia, which he continued to perform until he was relieved in December, 1832.

During the last year Lieutenant Waite, who, in addition to the superintendence of the quarries, and the accountability for public property at the breakwater, disbursed the appropriation, was allowed one per cent. on his disbursements, not to exceed two dollars per day; and Lieutenants Dimmock and Dusenbury, who successively acted as assistant engineers, were allowed double rations and a per diem of one dollar and twenty-five cents.

When the direction of the breakwater was confided to this department, I found an engineer employed at three thousand five hundred dollars per annum; an assistant, denominated "superintendent of stone work," at two thousand dollars per annum; and a disbursing officer at two thousand per annum. The disbursing agent and assistant engineer were dispensed with, and on the 1st of January, 1830, the salary of the engineer was reduced to three thousand dollars. Many of the duties properly appertaining to the engineer, with the whole accountability of money and property, have successively devolved on the military officers; and it has been for the increased duties and responsibilities that extra allowances have been made in the cases mentioned. I consider Major Bender entitled to the per diem which he claims, upon every principle of justice and equity, in consequence of his increased duties and responsibilities; for it has been as well settled by every department of the government as practice can settle a question, that extra compensation is due for extra services; the principle was admitted and acted on as far back as 1806, during the administration of Mr. Jefferson, and has been admitted and acted on under every subsequent administration. Major Bender was by law entitled to the *pay* and *emoluments* of a major; the measure of his compensation is, therefore, the *whole* pay and emoluments of major, not a *part*; his situation was analogous to that of a major of engineers superintending a work, who would receive both the per diem and additional rations which he claims. There would seem to be no good reason to deprive him of that which others similarly situated have been allowed, except that he failed to claim them until the appropriations for the years in which he acted had been entirely expended.

It is but justice to Major Bender to say that, in my opinion, the excellent system which he adopted, and the judicious arrangements which he made, saved more than fifty thousand dollars to the treasury while he was connected with the work.

I return the papers in the case; and am, sir, respectfully, your obedient servant,

TH. S. JESUP, *Quartermaster General.*

HON. E. WHITTLESEY, *Chairman of the Committee of Claims.*

24TH CONGRESS.]

No. 615.

[1st Session.]

APPLICATION FROM CITIZENS OF CLAY COUNTY, MISSOURI, FOR THE ERECTION OF MILITARY POSTS AND OPENING MILITARY ROADS, ETC., AROUND THE FRONTIER OF THAT STATE.

COMMUNICATED TO THE SENATE DECEMBER 24, 1835.

To the Senate and House of Representatives of the United States in Congress assembled:

The memorial of the citizens of Clay county, Missouri, respectfully represents: That your memorialists, for themselves, and in behalf of their fellow-citizens of the adjoining counties, would respectfully introduce to your consideration a subject, to them and the frontier settlers generally, of the highest and most

vital importance. Situated, as we are, upon the extreme western boundary of the United States, and of Missouri, we must necessarily be exposed to depredations from the numerous tribes of Indians, whose proximity renders them a source of increasing solicitude and apprehension to the people of the Missouri frontier. If the favorite policy of the general government, of colonizing upon our frontier, and in our immediate vicinity, the emigrating Indian tribes, endangers the peace and harmony of any section of the Union, we must, from our local situation, feel the full force of such a danger. As a measure of general utility to the whole country, we have nothing to urge against it. But while we are willing, in the genuine spirit of attachment to our common country, to acquiesce in a measure the evils of which we must exclusively bear, we think we have the right to expect the government of the country to afford us that protection which its own policy has rendered more necessary for our security. We have seen the prosecution of this esteemed policy of the government, for several years past, continually increasing the number of Indian tribes upon our frontier, while at the same moment we have seen the profits of the chase as constantly diminishing, and the elk and buffalo still retreating further back from the haunts of their numerous and increasing pursuers. The further continuance of the policy will still further augment the number of Indians already upon our borders, while the means of their support, so congenial to the wild and untamed spirit of the North American savage, will continue diminishing until it has entirely vanished. The period when this will occur cannot, in the nature of things, be remote. It is constantly and with accumulating rapidity approaching; and what will then be the situation of the aborigines can easily be anticipated—they will be compelled to seek some means of support other than the chase. That a race of men, whose inveterate habits have withstood the contagious touch of civilization for centuries without any material and radical change in their modes of life, can be suddenly converted into peaceful tillers of the soil, we consider utterly impracticable and visionary in the extreme. When this policy of the country shall have been accomplished, and the chase of the deer and buffalo shall have ceased, then will the restless and jarring spirit of the Indians manifest itself in bloody wars against each other and midnight invasion of our peaceful homes and firesides. This must be the inevitable result of the measures of the government, unless the protection of our border be greatly increased and improved.

Under these circumstances, deeply impressed with the correctness of our views, and conscious that we are asking nothing of the government but that protection which its own policy has rendered necessary for our security and peace, we would respectfully, but earnestly, ask your honorable body to adopt such a measure as will insure to our widely-extended and much-exposed frontier peace and security. For the purpose of accomplishing the desired object, we would call your attention to a plan of fortification which has been, as we understand, suggested by an intelligent individual possessing great experience, acquired from a long and intimate intercourse with the aborigines of the country, and well acquainted with the local situation of our frontier settlements. The plan is this: "Let a line of military posts be established along or near the boundary between the settlements and the Indians, beginning on the Upper Mississippi and extending to Red river; that well-constructed and permanent forts be built sufficiently large to garrison one company of infantry and two of dragoons at or near the following points: Des Moines rapids, on the Mississippi; Raccoon fork of the Des Moines, at the point where a due west line from the northwest corner of the State of Missouri would intersect the Missouri river; at Fort Leavenworth; at Harmony Mission, on the Neosho, below the Osage agency; at Fort Gibson, between the Arkansas and Red river, and on Red river. All the building materials can be had at each of these points. The distance between them is from one hundred to one hundred and fifty miles, and none of the posts need be more than twenty or thirty miles from the settlements, and not more than one hundred miles from steamboat navigation. The dragoons, instead of performing long journeys to the Rocky mountains, of no earthly service to the government, should be employed in patrolling the road from post to post, in companies, or smaller detachments. They should be empowered to take up every strolling white man or Indian going out from or coming into the settlements, and convey them to the nearest post for punishment. Fort Leavenworth would be the proper place for headquarters. Roads should be opened leading from post to post; bridges made; ferries established; mail-routes so arranged as to convey information, with regularity, to headquarters from all the posts on each end of the route." In addition to this, we would suggest the propriety of transferring the troops stationed at Jefferson barracks to the posts established at the above points. We cannot perceive the utility, if this plan should be adopted, of continuing the troops at Jefferson barracks. They are situated in the interior of the State, and when troops are required to assist in repelling invasion from Indian tribes, it requires much time and trouble to ascend the Missouri river. On the contrary, if Fort Leavenworth should be established as the headquarters, the troops could be sent to all points where, in all probability, they will be required, with much less delay and expense. Should they be needed at any point on the Mississippi, they could descend the Missouri to St. Louis in two days in steamboats. We would also state for your consideration a few important facts in reference to our local situation. By an examination of the map of the country, it will be manifest that we are exposed to attacks from the Indians on the whole western and northern line of the State. The settlements upon the Missouri river, for a distance of more than two hundred miles, are in the form of a narrow oblong, and are confined exclusively to the narrow strip of timbered country extending on each side of the river from twenty to forty miles. This strip of country is broad enough for a line of counties four deep, including those on both sides of the Missouri. The counties which lie immediately upon the river, in the general, contain from two to eight thousand inhabitants, while those which lie back of the above do not contain more than one-sixth that number; and these are scattered over a great extent of territory, which, for want of timber, never can be densely populated. Back of the settlements, on each side of the Missouri, there are extensive prairies, which contain so little timber that they will not be inhabited thickly, in all probability, for the next half century. This being our situation, it will be seen at once that we have a thin long frontier settlement subject to invasion for a distance of more than three hundred and fifty miles, and containing a population altogether inadequate to protect themselves against the incursions of the numerous bands of Indians within from two to ten days' ride of every point of our exposed frontier.

In connexion with this subject, we would also solicit your candid examination of a matter of much importance, not only to your memorialists, but to the government and the Indians themselves. They are impressed with the opinion that the office of superintendent of Indian affairs, now established at St. Louis, should be removed to some point on the western frontier of Missouri, and either established at the town of Liberty, Clay county, Missouri, or at Fort Leavenworth. In favor of this suggestion there are many facts, some of which we would respectfully bring to the notice of your honorable body, and others will, no doubt, readily suggest themselves to the experienced wisdom of Congress. The first prominent advantage of the proposed location which presents itself most forcibly to the minds of your memorialists

is its greater proximity to the various Indian tribes included within the limits of the northwestern superintendency. By examining the geography of the country, and ascertaining the local situation of the Indians, this fact will appear evident. We believe it may be asserted as a fact beyond dispute, that such a location would not only be much nearer the Indian settlements in the general, but be nearer each and every one of them within the limits before mentioned. The advantages of this greater proximity to the Indians, and the agents and sub-agents, must be palpable and obvious. That the Indians would prefer the change of location themselves we think there can be no doubt, as it would greatly lessen the time and trouble incurred in their frequent visits to the superintendency on business or otherwise. We think it equally obvious that the intercourse between the superintendent and Indians, and Indian agents and sub-agents, would be greatly increased and facilitated. The superintendent being the representative of the feelings of the government towards the Indians, and exercising, as he does, a superintending control over the agents and sub-agents, must necessarily have it in his power to exert a pervading influence upon the various tribes within the extensive limits of his superintendency. This power the proposed location would give him the means to exert with greater effect in disposing the Indians to peace among their own bands and towards the frontier settlements of the whites. From the vicinity of his situation he would obtain fuller and earlier information of any manifestation of warlike intentions, and be enabled to take such prompt and decided steps as would check the evil in the bud; while, on the contrary, had the information to be first transmitted to St. Louis, and a delay of some weeks incurred, it might be too late to arrest progress of ruin and desolation. But the salutary influence which he could exercise over the Indians is only one of the many advantages which would result from a change of location. One of the greatest sources of danger to the frontier settlements arises from the mutual incursions of whites and Indians upon the territory of each. These mutual aggressions could be greatly diminished, if not entirely prevented, were the superintendents in the immediate vicinity of their commission. These advantages, which would tend so much to preserve peace and harmony on our frontier, are of great importance to your memorialists, as they are also to the country generally.

The next class of benefits to which we would ask your attention seems more immediately to concern the government itself. It is confidently believed by your memorialists that much useless expense now incurred by the government in the Indian department in this quarter might be avoided. The estimated amount (as appears from the Blue Book) for furnishing the Indians with provisions while visiting the superintendent, agents, and sub-agents, for the year 1835, is eleven thousand eight hundred dollars. Should the proposed change occur, the Indians in going to and returning from the superintendency would not have to travel so great a distance, or to incur so much trouble and expense, passing, as they would, through an unsettled country, where they could procure provisions by the chase. The government is bound by treaty stipulations to furnish rations for most of the emigrating Indian tribes; and, from our adjoining situation and abundant capacity, we must necessarily furnish the produce required to fill the various contracts of the government in this quarter. Our citizens living upon the spot where the provisions must be purchased by the contractor, and being fully acquainted with the localities as well as the inhabitants of the country, could fill these contracts much cheaper than persons living at a distance. The contracts would be let out here upon the spot, and companies of our citizens would put in bids, who could furnish from their own farms much of the produce required; consequently they could and would underbid individuals whose residences and whose business would be in another section of the State.

The government is further bound by treaty with several Indian tribes to furnish annually a certain amount in agricultural implements, which can, as experience has proven, be furnished here much cheaper than in St. Louis. The reason of this is obvious. The contracts are generally small, and are to be filled at such a distance from St. Louis that any one not considered by persons generally as meriting attention cannot procure one; consequently there is little, if any, competition amongst bidders, and the contractor obtains the most enormous prices. For the truth of this remark we might appeal to every Indian agent and sub-agent on the Upper Missouri.

With these facts, and many others before us which might be advanced, we believe it would subserve the mutual interest of all parties to change the present location of the northwestern superintendency. We hope you will bestow upon those matters the attention they may merit, and adopt such measures as will give us permanent and lasting protection to our lives and property.

Resolved, That the foregoing memorial contains the unanimous sentiments of this meeting.

Resolved, That our senators and representatives in Congress be, and they are hereby, requested to use their utmost efforts to effect the passage of a law in accordance with the foregoing memorial.

Resolved, That the secretary send a copy of the proceedings of this meeting to each of our senators and representatives in Congress.

Resolved, That our sister counties be requested to hold similar meetings.

Resolved, That the different newspapers in the State be requested to publish these proceedings.

JOHN THORNTON, *Chairman*.

EDWARD M. SAMUEL, *Secretary*.

24TH CONGRESS.]

No. 616.

[1ST SESSION.]

EXPLANATORY ESTIMATES FOR THE ORDNANCE DEPARTMENT FOR 1836, AND THE NUMBER, LOCATION, AND CONDITION OF HOSPITALS FOR THE USE OF THE ARMY.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES DECEMBER 29, 1835.

Estimate for the service of the Ordnance department for the year 1836.

A.—For the national armories.....			\$330, 000
B.—For the armament of fortifications, viz: Providing in part the cannon, howitzers, mortars, cannon balls, shells, gun-carriages, mortar-beds, &c., for the fortifications completed, and for those now erecting.....			200, 000
C.—For the current expenses of the ordnance service, viz: Repairing small arms of the several arsenals and depots.....	\$15, 675		
Constructing and repairing field artillery carriages.....	11, 450		
Ordinary repairs, to keep the public buildings in order at the several arsenals and depots.....	13, 320		
Repairing and preserving military stores at the arsenals and fortifi- cations.....	8, 750		
Miscellaneous expenses at arsenals, including stationery, printing, fuel, forage for public horses, and other incidental expenses.....	10, 000		
Providing ordinary military supplies for the army.....	9, 150		
Expenses of the lead mines, viz: Compensation to the persons employed in collecting rents, receiving and distributing lead.....	\$4, 650		
Stationery, printing, fuel, forage for public horses, &c.....	1, 475		
For building two warehouses and an office on the west bank of the Mississippi river.....	1, 200		
		7, 325	75, 670
D.—For the purchase of gunpowder: For the purchase of 5,000 barrels of gunpowder, or materials for the same.....			100, 000
ARSENALS.			
E.—Mount Vernon, Alabama: For erecting a permanent brick wall to enclose all the buildings, measuring 5,280 feet in length, ten feet high, two feet thick, in- cluding the excavation, 350 cubic yards of earth, and coping the same with copper or stone.....	28, 812		
For constructing culverts of brick, for carrying off the water in front of the arsenal, 300 feet long, 4½ feet high, walls one foot thick, to be arched and paved with brick at bottom.....	994		
Removing the earth in arsenal yard, graduating and gravelling the same, containing 10,000 cubic yards, paving gutters, gravelling roads and walks, curbstone included.....	3, 350		
Erecting a guard-house of brick at the main gate, 25 feet deep and 12 feet wide, one story high.....	793		
For constructing a brick cistern, 15 feet diameter, to be grouted with hydraulic cement, and sewers leading to it, in the centre of the arsenal yard.....	1, 025		
		34, 974	
F.—Fort Monroe, Virginia: For making a yard around the timber shed near the wharf, for storing lumber and other materials.....	400		
For erecting four houses to accommodate two families each, for dwell- ings for hired mechanics.....	7, 640		
		8, 040	
G.—Pittsburg, Pennsylvania: For covering the roofs of the following buildings with zinc, viz: Timber shed, barracks, armory, blacksmith shop, carriage-makers' shop, turners' shop, harness shop, machine shop, and engine house; office building and kitchen to officers' quarters, containing 51,136 square feet; preparing the roofs and putting on the zinc.....	7, 334		
For making repairs and alterations to officers' quarters, and for finish- ing iron fence between the arsenal and quarters.....	1, 596		
For paving gutters with stone in the road around the public land at this arsenal, 2,068 yards, at one dollar per yard.....	2, 068		
For the purchase of the water right, and for the expenses of con- ducting water to this arsenal.....	3, 000		
		13, 998	

H.—Frankford, Pennsylvania:		
For constructing two cisterns, and laying iron pipes to them, from the buildings.....	\$1,500	
For constructing a large sewer to drain the arsenal yards.....	2,000	
For repairing the western storehouse at this arsenal.....	6,000	
For repairs and preservation of buildings and enclosures at this post.....	500	\$10,000
I.—Detroit, Michigan Territory:		
For completing the following buildings at this post, viz:		
Officers' quarters, soldiers' barracks, carpenters' shop, smith shop, armorers, turners, and saddlers' shop, gun-carriage shed and paint shop; office, guard-room, and surrounding wall to the buildings..	18,235	
For graduating arsenal square, making drains, &c.....	1,765	20,000
K.—Watertown, Massachusetts:		
For painting the public buildings at this arsenal.....		1,000
L.—Washington city:		
For building an addition to the carriage-makers' shop of 40 feet.....	1,700	
For building a new gun shed 202 feet long.....	2,500	
For constructing 1,381 feet of sea wall on the eastern front of the arsenal grounds, of stone, and laying the same.....	1,242	
For filling up the marsh on the eastern front, for the location of gun sheds, 3,333 cubic yards of earth, at 50 cents per cubic yard....	1,666	
For flagging for the shot piles, 156 square yards, at \$1 35 per yard..	210	
For building a new casting-house for cupola furnace.....	600	
For the purchase of a site, and cost of construction, of a new magazine and keeper's house.....	7,500	15,418
M.—Harbor of New York:		
For completing the construction of a small depot for munitions of war, at Governor's island, New York, viz:		
For finishing the necessary buildings, enclosures, wharf, the graduation of the grounds, and for the construction of permanent skidding for the preservation of heavy cannon, including an additional building for quarters for ordnance men, and storeroom for flannel, paper, &c.....		5,841
N.—Augusta, Maine, (Kennebec arsenal:)		
For enclosing in part the arsenal grounds with a permanent stone wall, to be seven feet high, and 1½ foot thick above, and three feet deep, and two feet thick below the surface of the ground....	10,000	
For flagging the basement story of the arsenal, repointing the north end and upper story, and repainting the same.....	1,200	
For a piazza six feet in width, on the west side of the quarters, and for other necessary alterations and repairs to the building.....	362	
For rebuilding a portion of the river wall, and extending the same..	1,250	
For prosecuting the improvements now in progress, cutting down and removing the high ridge running through the centre of the lot, filling ravines, building culverts, drains, &c., and for the gradual improvement of the post.....	2,500	15,312
O.—Augusta, Georgia:		
For the construction of a small magazine at this post, of brick, 12 feet long, 10 feet wide, with slated roof.....	750	
For the construction of a brick cistern, 13 feet wide and 13 feet deep, to be in hydraulic cement.....	530	1,280
P.—Watervliet, New York:		
Towards constructing a permanent stone wall around the arsenal land (45 acres) recently purchased at this post.....	18,820	
For constructing 17,750 cubic feet of foundation wall, and 942 lineal feet of iron fence in front of the arsenal along River street....	7,456	
For filling 4,000 cubic yards of earth in ravine along River street, at 20 cents per yard, \$800; and for paving 1,242 feet of side walk along River street, \$670.....	1,470	
For erecting a saw-mill at the new shops.....	534	
For constructing a brick cistern in area of the timber sheds.....	900	
For completing the grinding machine, and for constructing one vertical drill-press.....	570	
For flooring north and south gun-carriage sheds, repairing and partial additions to officers' quarters and guard-room, repairing public wharf, fences, culverts, &c.....	2,395	32,145
Q.—St. Louis, Missouri:		
For constructing walls of masonry between the storehouses and workshops at this post.....	3,077	
For enclosing the barracks yard with a low wall of masonry, and paling above, and for the erection of a melting furnace, guard-room, tool-house, and fire-engine room.....	2,952	

For the erection of two timber sheds of masonry, 151 feet by 30 feet each.....	\$5, 622		
For the erection of two gun-carriage sheds, 105 feet by 30 feet each.....	3, 608		
For the construction of walls of masonry between the workshops and gun-carriage, and timber sheds.....	1, 379		
For graduating the grounds at this arsenal.....	800		
For constructing six water cisterns of masonry, with leading pipes from the general workshops, and from the gun and timber sheds.....	2, 061		
		\$19, 499	
R.—Apalachicola, Florida:			
Towards completing the arsenal and other buildings in Florida, under the act approved April 5, 1832.....		35, 000	
S.—Baton Rouge, Louisiana:			
For constructing a powder magazine at this post, to contain from 2,500 to 3,000 barrels.....	15, 000		
For erecting quarters for enlisted and hired workmen at this arsenal.....	3, 000	18, 000	
T.—Pikesville, Maryland:			
For procuring 1,000 feet of stone coping for the walls of the magazine at this post, and laying the same; relaying brick pavements; for a fence to enclose the stable yard, and for new flooring for workshops.....		995	
			\$231, 502
U.—For supplying the arsenals with certain indispensable ordnance stores, viz:			
10, 000 pistols, at \$8.....	80, 000		
2, 500 cavalry sabres, at \$10.....	25, 000		
2, 500 Hall's carbines, at \$21.....	52, 500		
2, 500 sets of cavalry accoutrements, at \$4 79.....	11, 975		
1, 000 sets of Hall's rifle accoutrements, at \$4 05.....	4, 050		
5, 000 sets of infantry accoutrements, at \$3 01.....	15, 050		
			188, 575
V.—Cannon balls:			
For the purchase of 20,000 32-pounder, and 1,300 42-pounder cannon balls.....			29, 488
			1, 155, 235

RECAPITULATION.

For the national armories.....	\$330, 000
For the armament of the fortifications.....	200, 000
For the current expenses of the ordnance service.....	75, 670
For the purchase of gunpowder.....	100, 000
For the arsenals.....	231, 502
For supplying the arsenals with certain ordnance stores.....	188, 575
For the purchase of cannon balls.....	29, 488
	<u>1, 155, 235</u>

ORDNANCE OFFICE, *Washington, November 12, 1835.*GEO. BOMFORD, *Colonel of Ordnance.*

NOTES.

A.—The sum of \$330,000, herein estimated, is the same in amount as was appropriated for those establishments for the year 1835.

B.—For the armament of fortifications the sum of \$200,000 has been embraced in this estimate, being in addition to the amount of \$100,000 which has been annually appropriated for this branch of service for several years past. The additional amount inserted, if appropriated, is designed exclusively for procuring the gun-carriages necessary to arm the fortifications completed as well as for those now completing.

C.—The sum of 75,670 has been inserted for the current expenses of the ordnance service, being about \$7,600 more than was appropriated for this branch for the year 1835. This amount of \$75,670 being required in consequence of the expenditures under this head being greater during the present year than was foreseen when the estimate of 1835 was prepared.

D.—There is at present but a small quantity of gunpowder on hand, and much of it is of very inferior quality—none of any importance having been purchased since 1819. All this powder that could be rendered serviceable has been remanufactured during the present year, and it is estimated that the present state of the country warrants a supply of at least 5,000 barrels for the fortifications.

E.—The present enclosure around the public buildings is a temporary *wooden* fence, which evidently presents no barrier to the frequent and prevalent fires in the adjacent woods; from this circumstance the buildings and other public property at this post are greatly endangered. The other sums inserted are deemed necessary towards the completion of the works according to the original design. The inspector

of armories and arsenals has recently inspected this arsenal and carefully examined the works. He recommends that the amount embraced in this estimate be asked for, as the objects to be effected are deemed indispensable. He states the necessity of bringing together at once a sufficient number of workmen from distant parts of the country; it being economical to employ a large rather than a small number, on account of subsistence and other charges, and that a large appropriation will accomplish more work in proportion to the sum expended than a small one.

F.—The necessity for erecting quarters for the mechanics arises from the circumstances that those now occupied by them are old decayed frame buildings, and not worth repair; and it being impossible to procure lodgings in the vicinity of the arsenal renders it proper that quarters should be erected near the workshops in which the workmen are employed. The inspector of armories and arsenals approves the above estimate.

G.—The buildings at this post were built about twenty years since, and the roofs covered with shingles—they are old and decayed; it is proposed to cover the buildings with zinc. There is at present no entrance into the quarters on the proper front, and the yard being now enclosed with a permanent fence, it is proposed to give each a centre door and portico; this will be the means of removing a great inconvenience in the present plan, and cause the buildings to be properly ventilated. The iron fence between the arsenal and quarters was commenced in 1835; an amount has been embraced in this estimate for its completion. The gutters are required in the roads all around the public land, which, during the rainy season, have washed so badly by the heavy rains as to endanger the stone walls. The great quantity of water that empties from the high grounds into the river, through the road on the northeast side of the public lands, renders such an improvement, as is here estimated for, very important. The great importance to the place of a more ample supply of water renders the purchase of the water right very desirable; and it is believed that the amount required, although less than the sum demanded by the proprietors, may suffice to procure the privilege so long sought after of taking water from soft springs, the only source from which a supply of water can be obtained from land higher than that upon which the public buildings stand. Recommended by the inspector of armories and arsenals.

H.—The construction of two cisterns at this post to contain water is deemed necessary for security against accidents by fire. The ground on which the buildings are placed is so nearly level as to be with great difficulty and very slowly drained—an inconvenience felt especially during the winter. It is not doubted that, by an effectual system of draining, the healthfulness of the place will be improved, and the durability of the public buildings increased. To effect these objects the sum of \$2,000 has been inserted for the construction of a large sewer.

The western storehouse or arsenal, erected many years since at this post, requires a thorough repair; in its present condition it is considered unsafe for storing heavy stores. The sum of \$6,000 has, therefore, been embraced for repairing the building and putting it in complete order. Recommended by the inspector of armories and arsenals.

I.—The officer in charge of this post estimates the sum of \$20,000 as necessary to be expended in the year 1836, in order to fulfil the intentions of the 5th section of the act No. 152, approved June 20, 1832. The inspector of armories and arsenals approved the above estimate as far as it goes, but thinks it scarcely sufficient for the objects contemplated.

L.—An addition to the carriage-makers' shop at this arsenal is required for the convenience of putting together barbette and casemate carriages constructing for the fortifications.

The officer in charge of the post recommends the building of a gun shed, in consequence of the present shed being full of carriages.

The building of the sea wall is considered indispensable, for the proper enlargement of the space within the arsenal limits, that all the necessary buildings may be erected, and, by the filling up of the marsh, that the health of the place may be improved. The inspector of armories and arsenals has recently inspected this post and recommends the above.

The magazine is situated on the margin of the Chesapeake and Ohio canal, about four miles from Georgetown, and so near that the embankment of the canal partly rests on the outer wall of the magazine. The walls, consequently, and the foundations of the building, are constantly kept wet by the water penetrating through the embankment; in consequence of which, the powder in the magazine suffers very materially. Besides, the situation is unhealthy; all persons who have been stationed there having been constantly sick during the summer months.

The sum of \$7,500 has been inserted for the purpose of procuring a more suitable site, and erecting in part a magazine sufficiently capacious to contain from 3,000 to 3,500 barrels of powder.

M.—The city of New York has advantages of communication with the coast of the United States which are not possessed by any other seaport—transportation for munitions of war to almost every part of the coast being attainable at all times of the year. But, the United States having no suitable storehouse there, much inconvenience has been experienced during that season of the year when the communication with the city of New York and the Watervliet arsenal is closed by ice; and, when stores are wanted for transportation, they cannot, therefore, descend the North river. It is for these reasons a small depot at Governor's island is required.

N.—A suitable enclosure for the public grounds is very necessary at this post; it is proposed to erect permanent stone walls around all the buildings for their security. The flagging of the basement story of the arsenal is necessary, in order that the stores may be deposited there for preservation. The erection of a piazza to the quarters is required to protect the buildings in the inclement season of the year. The rebuilding and extension of the river wall is necessary for securing the banks of the river road, and for the enlargement of the limits of this post, that the necessary buildings may be erected thereon when required. The item embraced in this estimate for the prosecuting the improvements of this post is considered sufficiently explanatory. The inspector of armories and arsenals has recently inspected this arsenal, and recommends that the amount of \$15,312 be estimated, as the objects to be effected are deemed of great utility.

O.—The items under this head are considered sufficiently explanatory.

P.—It is deemed necessary to enclose the grounds by suitable walls, with a view to the ultimate fulfilment of the object of the act No. 59. This amount, (\$7,456,) added to that for continuing the walls around the public grounds, will completely enclose the public buildings situated on the east side of the Erie canal, and, in a great degree, on the west, and is deemed indispensably necessary for the protection of the public property and buildings—surrounded by a large and growing population, and exposed (however great the vigilance exercised) to the designs of any incendiary or pillager. During the past season

the buildings were fired and narrowly escaped destruction. The filling of the ravine is considered indispensable, as connected with the walls, and for convenient access to the shops. The municipal authorities of the town of Watervliet have caused the streets on both sides of the arsenal to be paved, and it is desirable that the pavement on the United States property should be made to correspond with that of the town; to effect which, the sum of \$670 has been inserted in this estimate.

The erection of a saw-mill is much wanted. There is abundant and convenient water for working the mill, and the cost of the erection will be saved by one year's operations at the post.

The four timber sheds are situated west of the canal, and are about a quarter of a mile from a supply of water. The erection of a cistern to contain water near them is deemed indispensable to guard against accidents by fire.

A grinding machine at this post was commenced in 1835; the sum of \$570 has been embraced in this estimate for its completion, as well as for constructing a vertical drill-press. The sum of \$2,395 has been inserted for repairs and additions to the buildings, and for the gradual improvement of the post.

Q.—The erection of the connecting walls between the buildings already constructed is deemed necessary for their security. The barracks occupy a position immediately in the centre of the area; they are open on every side; it is proposed to enclose them with a wall of masonry below and a paling fence above.

The erection of timber and gun sheds is deemed indispensable for the preservation of gun-carriages and timber; the lumber for their construction has already been purchased.

The amount embraced for the construction of the walls between the workshops and sheds is required, in order that the plan originally contemplated for this arsenal may be carried into effect.

A supply of water is essentially necessary—first, as a measure of security against fire, the distance of the river precluding a supply from thence in an event of this kind, and the wells sunk yielding so small a quantity that no reliance can be placed on that source. The inspector of armories and arsenals recommends the above.

R.—The officer who was in charge of this post has estimated the sum of \$73,998 for completing the public works at Chattanooga during the year 1836, in order that the intention of the act approved the 5th of April, 1832, be carried into effect as early as practicable.

The inspector of armories and arsenals recently inspected this post, and found the materials provided for the construction of the buildings to be of an excellent quality, and the execution of the work to be good and creditable to the officers who have superintended it. He states that a large sum can always be expended with more economy than a small one, in any one year, in consequence of the high wages paid to master-workmen and others, and recommends that \$50,000 be estimated for the expenditures of 1836—a sum much larger, it is perceived, than that contained in the estimate, to wit, \$35,000.

S.—The position of the present magazine is deemed an unsafe one, inasmuch as the infantry barracks have been built within twenty feet of its door. In the event of fire breaking out in the barracks, the whole of the valuable buildings and other property at this post would be endangered. Great quantities of powder have been ruined by the defective construction of this magazine, which is now old and decayed; but the principal objection is that its dimensions, if it were unobjectionable in other respects, are wholly insufficient for the supply of powder in that section of the country.

The position of Baton Rouge, always guarded by a large military force, and being on the Mississippi river, and within easy communication with New Orleans, makes it the most eligible position for a large magazine that can be found between St. Louis and the mouth of the Mississippi.

The present ordnance barracks are wholly unfit for soldiers' quarters, being very old, small, and decayed. The erection of new barracks is considered indispensably necessary for the health and comfort of the men stationed at this post.

T.—The wall around the magazine at this post was originally covered with shingles, which have decayed; it is proposed to cover it with stone coping, which alone can preserve it.

The other items are considered sufficiently explanatory, and are deemed indispensably necessary for the preservation and good condition of the post. The amount of \$995, embraced in this estimate, has been approved and recommended by the inspector of armories and arsenals.

U.—The stores embraced in the first five items are required, since the arsenals have been completely exhausted of this description of stores in consequence of the recent issues to the several States, under the act of 1808, in order to close their accounts up to December, 1834. The 5,000 sets of infantry accoutrements are required, there being but a small supply on hand east of the Alleghany mountains.

V.—These being necessary in order to make 100 rounds for the guns to be mounted on carriages now made, and which are expected to be made under the appropriations now estimated for.

In the present prospect of the country, the fortresses would, it is considered, be unsafe without this provision of round shot.

HOSPITALS AT VARIOUS POSTS.—EXPLANATION.

SURGEON GENERAL'S OFFICE, *December 28, 1835.*

SIR: In compliance with your instructions, I have to state that, from the special reports received from the several posts agreeably to an order of the 21st October last, it appears—

First. That no hospitals have been erected at the following posts, and that the sick have been placed in barrack rooms, casemates, or temporary buildings, none of which have the necessary accommodations, and most of which are entirely unsuited for the purpose, viz:

- | | |
|---|-----------------------------------|
| 1. Hancock Barracks, Maine. | 7. Fort Johnston, North Carolina. |
| 2. Fort Independence, Massachusetts. | 8. Fort Macon, North Carolina. |
| 3. Fort Trumbull, Connecticut. | 9. Fort Oglethorpe, Georgia. |
| 4. Fort Columbus, New York. | 10. Fort Morgan, Alabama. |
| 5. Fort Hamilton, New York. | 11. Fort Pickens, Florida. |
| 6. Fort Washington, District of Columbia. | 12. Fort Jackson, Louisiana. |

Second. That the buildings at the following posts are badly arranged, old, and entirely decayed, viz:

- | | |
|--------------------------------------|----------------------------|
| 1. Fort Preble, Maine. | 4. Fort Jesup, Louisiana. |
| 2. Fort Constitution, New Hampshire. | 5. Fort Gratiot, Michigan. |
| 3. Fort Wolcott, Rhode Island. | |

Third. That those at the following posts, except, perhaps, Fort McHenry, are sufficient for the present, with suitable alterations and repairs, viz:

- | | |
|------------------------------------|-----------------------------|
| 1. Fort McHenry, Maryland. | 4. Fort Mitchell, Georgia. |
| 2. Fort Severn, Maryland. | 5. Fort Wood, Louisiana. |
| 3. Castle Pinkney, South Carolina. | 6. Fort Crawford, Michigan. |

Fourth. That those at the following posts afford sufficient accommodations for the sick, and are in good order, a few of them requiring trifling repairs:

- | | |
|-----------------------------------|-----------------------------------|
| 1. Fort Sullivan, Maine. | 7. New Orleans, Louisiana. |
| 2. Fort Wood, New York. | 8. Fort Pike, Louisiana. |
| 3. Fort Monroe, Virginia. | 9. Baton Rouge, Louisiana. |
| 4. Fort Moultrie, South Carolina. | 10. Jefferson barracks, Missouri. |
| 5. Fort Marion, Florida. | 11. Fort Dearborn, Illinois. |
| 6. Fort King, Florida. | 12. Fort Mackinac, Michigan. |

Reports remain to be received from a few of the extreme posts, viz:

- | | |
|-----------------------------|-----------------------------------|
| Fort Brooke, Florida. | Fort Armstrong, Illinois. |
| Fort Towson, Arkansas. | Fort Winnebago, Michigan. |
| Fort Gibson, Arkansas. | Fort Snelling, Upper Mississippi. |
| Fort Coffee, Arkansas. | Fort Howard, Michigan. |
| Fort Leavenworth, Missouri. | Fort Brady, Michigan. |

New hospitals will be required at several of these.

The reports received contain a description of "the number and dimensions of the rooms occupied; the uses to which they are applied; the number of patients they can conveniently accommodate; and the full number they can contain in cases of emergency;" and will, if required, afford more particular information in respect to each post; and from these it is believed that new hospitals are now required at all the posts enumerated in the first and second lists above given.

Very respectfully, your obedient servant,

JOS. LOVELL, *Surgeon General.*

Hon. Lewis Cass, *Secretary of War.*

24TH CONGRESS.]

No. 617.

[1ST SESSION.]

PROPOSAL OF THE SECRETARY OF WAR FOR AN APPROPRIATION FOR PAYING THE FLORIDA MILITIA CALLED OUT TO SUPPRESS INDIAN HOSTILITIES IN THAT STATE.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 5, 1836.

WAR DEPARTMENT, *January 4, 1836.*

SIR: Information has reached this department that hostilities have been commenced by the Seminole Indians in Florida. General Clinch has the command of the troops in that Territory, and has, subject to his orders, fourteen companies of the army, amounting to about seven hundred men. He has also been authorized to call upon the acting governor for such militia force as he may find necessary. Under this authority a considerable number have been ordered out and are now in the field. The means of making anything like a detailed estimate of the expenses are not within the reach of the department; but it is necessary that funds should be provided to meet the claims which will no doubt be presented without delay, and one of which has already been made. I have therefore the honor to propose that an appropriation may be made of the sum of eighty thousand dollars for the expenses attending the repression of the hostilities commenced by the Seminole Indians in Florida.

Very respectfully, your most obedient servant,

LEWIS CASS.

Hon. C. C. CAMBRELENG, *Chairman Committee Ways and Means, Ho. Reps.*

24TH CONGRESS.]

No. 618.

[1ST SESSION.]

QUANTITY AND CONDITION OF THE ORDNANCE AND ORDNANCE STORES AND ARMS BELONGING TO THE UNITED STATES AT THE ARMORIES, ARSENALS, DEPOTS, AND FORTS; AND EXPENDITURES AT THE SEVERAL ARMORIES AND ARSENALS, AND FOR THE MANUFACTURE OF HALL'S RIFLES, FROM 1816 TO 1834.

COMMUNICATED TO THE HOUSE OF REPRESENTATIVES JANUARY 5, 1836.

WAR DEPARTMENT, *January 2, 1836.*

SIR: In compliance with the resolution of the House of Representatives of February 23, 1835, calling upon this department for certain information in regard to the condition of the ordnance and ordnance stores belonging to the United States, and the expenditures accruing therefrom, I have the honor to transmit two reports; the first from the colonel of ordnance, the second from the Second Auditor.

The latter shows the amount and objects of expenditure from 1816, when the office was established, to the close of 1834.

For the information required by the resolution for the period prior to 1816, I beg leave to refer to the document that accompanied the President's message of January 3, 1823,* in the second session of the 17th Congress, which may be found in the ninth volume of the State Papers, and which I request may be considered a part of this report.

Very respectfully, your most obedient servant,

LEWIS CASS.

HON. JAMES K. POLK, *Speaker of the House of Representatives.*

ORDNANCE OFFICE, *Washington, December 24, 1835.*

SIR: I have the honor to transmit herewith the several statements, (marked from A to D, inclusive,) made in obedience to the resolution of the House of Representatives of the 23d February, 1835. They contain all the information called for as fully as can be obtained from the records of this office.

Statement A exhibits that part of the information called for by the following quotation from the resolution: "A statement showing the state and condition of the ordnance and ordnance stores under the control of the Ordnance department, the number and kinds of arms and accoutrements, and heavy ordnance on hand, specifying the number and kinds fit for service."

Statement B exhibits "the average cost of each kind of ordnance and small arms and accoutrements in each year."

Statement C exhibits the number of officers and workmen "employed at the respective armories and arsenals in each year;" and "the number of workmen, in each year, devoted to the manufacture of Hall's patent rifles."

Statement D exhibits "the number and kinds of arms produced;" and "the number of Hall's rifles annually produced, and the place where manufactured."

A copy of the resolution above-mentioned, copied in full on the succeeding page, is also transmitted. Those parts of it which are complied with by this office being designated by red lines, [printed in *italic.*]

I have the honor to be, sir, your most obedient servant,

G. BOMFORD, *Colonel of Ordnance.*

HON. LEWIS CASS, *Secretary of War.*

TWENTY-THIRD CONGRESS, SECOND SESSION.

CONGRESS OF THE UNITED STATES.

IN THE HOUSE OF REPRESENTATIVES, *February 23, 1835.*

On motion of Mr. Mann, of New York,

Resolved, That the Secretary of War be requested to report to the next Congress, at the commencement of their first session, a statement showing the *state and condition of the ordnance and ordnance stores under the control of the Ordnance department, the number and kind of arms and accoutrements, and heavy ordnance on hand, specifying the number and kinds fit for service*; the amount of money expended in each year at the respective armories and arsenals, and the general objects of such expenditure, since their establishment; *the average cost of each kind of ordnance and small arms and accoutrements in each year, showing the aggregate expense of buildings, implements, and machinery, devoted to the manufacture of arms at each armory; the number of officers and workmen employed at the respective armories and arsenals in each year, and the number and kinds of arms produced, the aggregate cost of the whole, and the average cost of each description manufactured*; and showing, separately, the expenditure, for each year, of buildings, machinery, implements, workmen, and *their number, in each year, devoted to the manufacture of Hall's patent rifles; the number annually produced, and the place where manufactured; the average cost of each, including buildings, machinery, and all charges; and the number now belonging to the United States.*

Attest:

W. S. FRANKLIN, *Clerk.*

SPECIAL INDEX.

A statement showing the state and condition of the ordnance and ordnance stores under the control of the Ordnance department; the number and kind of arms and accoutrements, and heavy ordnance on hand, specifying the number and kinds fit for service.—(See "Statement A.")

The average cost of each kind of ordnance and small arms, and accoutrements in each year.—(See "Statement B.")

The number of officers and workmen employed at the respective armories and arsenals in each year.—(See "Statement C.")

The number and kinds of arms produced.—(See "Statement D.")

The average cost of each description manufactured.—(See "Statement B.")

Number of workmen devoted to the manufacture of Hall's patent rifles.—(See "Statement C.")

Number of Hall's patent rifles annually produced, and place where manufactured.—(See "Statement D.")

The other information called for by the resolution is furnished by the Second Auditor.

* For this document see volume 2 State Papers on Military Affairs, No. 236, page 472.

Statement of the average cost of small arms at the Springfield and Harper's Ferry armories, from the year 1795 to 1835.

Year.	Springfield.			Harper's Ferry.					Remarks.
	Muskets.	Rifles.	Wall pieces.	Muskets.	Rifles.	Pistols.	Indian guns.	Calet muskets.	
1795.....	\$12 06	\$17 00	\$15 78	\$17 00	\$16 00	The information in possession of this department, on the subject of the cost of the manufacture of small arms at the national armories, between the years 1795 and 1821, is very imperfect. These establishments were not in charge of the department, but in that of the purveyor of public supplies, under the direction of the Secretary of War, until 1816, when they were put in charge of this department. The average cost of the arms during the above period, (from 1795 to 1821, inclusive,) at the armories, from the best information that can be collected from the imperfect documents is, at Springfield, \$12 06, and at Harper's Ferry, \$15 78. It is to be remarked that this difference against Harper's Ferry arose from the high transportation occasioned by its then difficulty of access, the high prices of the necessaries of life, joined to the unhealthiness of its location.

TREASURY DEPARTMENT, *Second Auditor's Office, November 16, 1835.*

Sir: In compliance with the request contained in your letter of March 25, 1835, enclosing a copy of a resolution of the House of Representatives of February 23, 1835, calling for certain information respecting ordnance and ordnance stores, I have the honor to transmit herewith a statement exhibiting the amount of money expended in each year at the respective armories and arsenals, and the general object of such expenditure, from the year 1816, when the records of this office commence, to the end of 1834; together with the aggregate expense of the manufacture of arms at each armory, and the annual expenditure, as far as can be ascertained, for the manufacture of Hall's patent rifles.

Very respectfully, sir, your obedient servant,

W. B. LEWIS,
 Hon. Lewis Cass, *Secretary of War.*

Statement exhibiting the amount of money expended in each year at the respective armories and arsenals, and the general object of such expenditure, from the year 1816 to the year 1834, inclusive; the aggregate expense of the manufacture of arms at each armory; and showing, separately, the annual expenditure for buildings, machinery, implements, and workmen devoted to the manufacture of Hall's patent rifles; prepared in pursuance of a resolution of the House of Representatives, dated February 23, 1835.

	1816.			1817.			1818.			1819.		
	Purchase of land and erection	Expense of the manufacture and repair of arms, and construction and repair of gun-carriages.	Am't expended at each armory and arsenal in this year.	Purchase of land and erection	Expense of the manufacture and repair of arms, and construction and repair of gun-carriages.	Am't expended at each armory and arsenal in this year.
